Its nice to know there are no threats to US security anymore. Especially now
that the Chinese have bought our space technology and the Russians have
deployed a new nuclear missile.

By all means send your director such a letter. The manner and
tone is SURE to impress them. not the way you want to impress them
however

Yep, you ar doing a very good impression of EVERYTHING that is wrong in
radio....idiots like you, keep your fould mouth for one of the idiot groups
. If you wish to give your opinion on a radio/space related matter please do
so WITHOUT the language !.

This group is one of the few I go in any more because of this type of
stupidity !

Ian Koenig

GSteve,

If this thread is starting to bore you, then mark it as read. Go back to alt.radio.cb as someone else had stated. If you don't like it here, Take a hike.

I simply asked a question, and thanks to the people that answered it.

Guess Idiots really do hang out here as well.

And anyone with half a brain would know where to get the Keps, so why does it have to be posted? After all, I go them straight from NASA.

AND A NOTE TO IAN KOENIG: Keep up the posts Ian, I enjoy reading about what you have to say, don't let this Dolt get to you.

Paul.

Allen,

I don't know of any webpages that show the cyrillic equivilants but
there
are only 4 more characters in the Russian alphabet then in ours. The morse
code
is the same except for the 4 characters. Here is thier breakdowns;

- ..--
- ---.
- ..-..
- .-.-

Hope this helps.

This is true only for the old editions, e.g. the 1991 handbook
contains also the Japanese, Thai, Korean, Arabic, Hebrew, Russian and
Greek Morse alphabet. Newer editions, such as the 1995 edition shows
only the English character set.

While

.- is A
-... is BE
-.-. is TSE
_.. is DE

and so on,

: > Here is thier breakdowns;
: >
: > ï¿½ ..--
: > ï¿½ ---.
: > ï¿½ ..-..
: > ï¿½ .-.-
: >
: > Hope this helps.

I could not make any sense of this list. The original posting did not
contain any character set definitions and assuming the character set
was Latin-1, those characters listed indeed match with the code shown
_in_a_latin_alphabeth_, so .-.- is A with diaeresis.

However, in the Cyrillic set (according to the 1991 handbook)

..-- is YU
---. is CHE
..-.. is SHA
.-.- is YA

Trying to view the original message in any of the commonly used character sets used for Russian (ISO-8859-5, CP-1251 or KOI-8) did not make any sense either.

I found the Cyrillic morse table in a Russian encyclopedia after posting
the question. In case anyone else in interested, here it is:

S = dot, L = dash.

AH SL
BEH LSSS
VEH SLL
GEH LLS
DEH LSS
YEH S
ZHEH SSSL
ZEH LLSS
I SS
KAH LSL
EL SLSS
EM LL
EN LS
OH SSS
PEH SLLS
EHR SLS
EHS SSS
TEH L
U SSL
EHF SSLS
KHAH SSSS
TSEH LSLS
CHAH LLLS
SHAH LLLL
SHCHAH LLSL
YERIH LSLL
YU SSLL
YAH SLSL
I KRAT. SLLL
M., TV. ZNAK LSSL
EH SSLSS

Since the UK and your tax pounds do not fund the Russian's portion of the space station or feed the Russian people so that their government can deploy new nuclear weapons capabilities to aim at the US, I guess you can live with that attitude. How bout if the Russian government gave P3D a free ride on the next sub-launced missile? Then could we see the direct relavence of tracking space debris on this group?

Ian, if you want to edit out my comment to the above post, you should have
also edited out my "> brianburke@my-dejanews.com wrote in message" line. Or
you could use dejanews "view thread" and comment directly to the original
poster. Instead, you have made it appear that I was the author of the
original post. Shame on you. Your best best would be not to comment on
threads that you want to die off quickly. 73, Brian/N0iMD last this subject

TAPR, http://www.tapr.org/, does a group purchase of Garmin GPS-20 and -25
and Motorola Oncore-vp GPS receivers and accessories. I assume they are
NMEA compatible.

http://www.tapr.org/gps/index.html for more details.

I hope this helps.

30. Station Program with IC-821

Newsgroup: rec.radio.amateur.space
Date: 1999-01-03 00:00:00 UTC
From: Michael Blake <k9jri@worldnet.att.net>
Message-ID: <76odde$pv5@bgtnsc01.worldnet.att.net>
Source record: 14243

I am having a problem getting the "full duplex console mode" parameters set up to control the transmit & receive frequencies on my IC-821H.

Do I leave the rig in the normal mode or place it in the SAT-R mode when using.

Any help would be appreciated. I have not found anything on the 821 in the help files. I do not have the transceive option and the communications link via the CI-V is ok. The program does display the frequiencies but does not correctly change both the xmit & recv displays on the 821

Thanks - K9JRI

hi,
In first time excuse my english is very bad !

I have a IC-820 and i mean is the same equipement !

To use Station program you do not stay in Sat Mode !
And you can disactivate the tranceiver mode on your IC-821
(In my IC-820 this parameter is "On" by default !)

I have other problem with this program :

-The speed of update the freq on my IC-820 is too long (20 sec. to 1 min)
and with F0-20/29 in this time the doppler change a lot !

Good luck with Station !

Thank you! I had not done a very good reading job. You have gotten me on the right track.
My update is faster than you mentioned though, varies between 2 and 5 seconds. I am running 19,200 bps to the CI-V and the computer is a 200mHz Pentium.

I am waiting for the registration numbers to arrive so I will not enter too much data into Station as it will not save it.

John,

The only thing I know of that works well is the SWAGURSAT from Swagur in
Middleton, Wisconsin. It takes the signal from the 10.7 MHz output and gets
you the proper bandwidth and signal strength. email is: swagur@swagur.com

www.swagur.com

for the website.

Good Luck!

I purchased the Garmin GPSIII and couldn't be more happy. I have
previously
owned the Garmin GPS-38. The GPSIII allows you to remote mount the
antena,
which is a big plus if you are using it in your car, on your bike, etc.
You
don't have to buy a separate antena, just need a Fem to Fem adapter and
a
lenght of cable with female ends.

I have found that I enjoy the included "map" much more than I thought I
would.
I was pleasantly surprised at how detailed the included map was. For
example
Cloverdale, CA was included ... now that is a small town! Larger lakes
(with
names on the larger ones) are included. Just wish the larger peaks were!

As an added surprise, when I hooked the GPSIII to my Kenwood THD7A, the
stations that were heard were automaticaly placed on the displayed map
of
the Garmin GPSIII. The station was marked with a square dot and placed
on
the waypoints list. These stations did not have icons (although you can
add
an icon to each station manualy). The stations are labeled with the last
6
digits in the call sign.Can't say if this would be the case if it were
hooked to a KPC-3... don't know...havent tried it yet.

I can say the the moving map display on the Garmin units is better than
most
others... like Magellan.

You know, I've always wondered what people do, that is actually do, to try getting a dead satellite up and running. Seems to me, like, if you send the command, and nothing happens, then it's dead. You could try again later, maybe try more power, but like what else is there to it?

49. ARRL Pres W6ROD's comments revisited, with translations.

Newsgroup: rec.radio.amateur.space
Date: 1999-01-06 00:00:00 UTC
From: CBRambo@W6RCeicilA.net
Message-ID: <76uvna$r5u$1@usenet43.supernews.com>
Source record: 14063
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

Looks like the last thing the ARRL Board of Fools wants
is to listen and carry out the will of the membership. The
Board conducted surveys of the membership and then does
the complete opposite. It makes me so sick I could just
vomit. HEY ARRL, you want to save money? You can quit
having elections since you won't truthfuly represent
your membership anyway. ARRL will destroy a good thing
if it means more money in their pockets.

Rod Stafford, W6ROD was shoveling Bullshit when he wrote:

>Thanks for your input about the ARRL's licensing
>restructuring and testing proposal adopted by the
>ARRL Board of Directors a couple of weeks ago in
>Connecticut. Let me see if I can shed some light
>on some of the reasons for the proposed changes.

(Translation: We dont give a damn about your input, only ours.
Sorry you wasted time filling out our survey.)

>I am certain that some hams will find change itself
>to be very disconcerting. It is our nature to like
>things the way they are and the way they were. We're
>generally comfortable with that and not comfortable
>with change. In many instances, we would like to return
>to "the good old days" of ham radio. However, there
>are some very real reasons why amateur radio has to make
>some changes if it is to be around in the 21st century.

(Translation: We need to make getting licenses easy.)

>As amateur radio operators, we're slipping farther
>and farther behind on the technology power curve, and
>people take note of that. Take a look at the primary
>modes of communication we use: SSB, FM, CW, etc. Each
>of those modes of operation have been around 50, 60
>or 70 years or more.

would be popular, so we couldn't submit any ideas
with our proposal. Hope No one noticed.)

>I was traveling by airplane not long ago and the
>person sitting next to me was a retired electrical
>engineer.

(Translation: Your dues bought my plane ticket. League
money working hard for you.)

>As we chatted I told him about my involvement with
>amateur radio. He had a ham license about 45 years
>ago. He was amazed hams still use SSB, let alone CW.
>He wondered why the hams didn't use some of the more
>"modern" modes of communications.

(Translation: Not surprising, they won't use modern modes eihther.
We know most Techs haven't and won't try
satellite or even packet!)

>This is a typical reaction. We have to change people's
>perception of ham radio being a pursuit involving 70 year
>old communication techniques. One of the ways to help
>change that perception is to modernize our approach to
>CW.

(Translation: We can heap Bullshit on the issue and say CW
strangled the institution of modern modes, and
CW is blocking technology.)

>We're not eliminating it, we're simply trying to put it
>in its proper perspective as we move into a new century.

(Translation: Are we bold enough to propose the total
elimination Of CW? No, but our proposed new
easy licenses will still please thousands
Techs, CBer's and other non-hams. We'll gain
their favor, and memberships.)

>CW will be around for a very long time as one of the
>modes of communication for amateurs. However, as
>an examination element, it carries much more weight than it
>should at the present time.

(Translation: We're losing membership dollars because many
potential members reject learning CW and won't
join us unless they can have HF for free. We
hear their cry.)

>proper perspective in the examination context as we try
>to bring amateur radio into the current technological
>environment.

(Translation: Hope we can fool our grass roots support, old timers,
and pro-code League members with this Anti-CW Bullshit
membership drive technology rhetoric.)

>I don't think there are many people who see CW as the
>future of amateur radio. If they do, in my opinion they
>are looking backwards, not to the future of ham radio.

(Translation: Pro-coders are backwards and their arguments
interfere with our membership drive.)

>And, as I mentioned, we're not eliminating CW. There
>will be plenty of people operating CW just as they have
>for years.

(Translation: We want to eliminate CW, but our life members
would die of shock. We'll call for the total
elimination of CW in our next proposal.

>Most non-hams think of ham radio as a hobby. And as a
>matter of fact, most hams think of amateur radio as a hobby.
>Sure, the League tries to stress the emergency communications
>and the public service aspects of amateur radio to those that
>are unaware of that role and people outside of ham radio do
>have some understanding of that role of amateur radio. It is
>certainly one of the first things I tell people about amateur
>radio if they have no acquaintance with the amateur service.
>However, the bottom line is we're viewed as a hobby.

(Translation: Maybe we should mix in some truth with the Bullshit.)

>The point is, we have some very valuable spectrum that is
>available to us for hobby purposes, and yes, even for our
>public service activities. It has become more and more
>difficult in recent years to justify retaining our spectrum
>from commercial interests who make some very good arguments
>as to why they should be allowed to use our spectrum for
>endeavors that will generate jobs, used advanced telecommunications
>techniques and put the spectrum to use for commercial purposes,
>not just for hobby purposes.

(Translation: Hope the commerical companies seeking spectrum
will believe us when we say ham radio will get
more technological and that we're not just
spreading more bullshit.)

>Even considering the perception that what we do is a "hobby,"
>we can counter some of that perception that we're "a dying breed"
>clinging to old technologies when we can show that amateur radio
>is a vital, growing activity. One only has to look at the statistics
>in the last few years to find that to be untrue. In recent years
>the average age of a active ham has crept up to nearly 60 years old.
>The growth rate of new hams coming into the service is at an
>all-time low of less than 2%. That doesn't even keep up with the
>"loss rate" of people who die or simply leave amateur radio for
>various reasons. The argument that we need to retain spectrum for
>the growth of amateur radio in the face of dwindling numbers is an
>unconvincing one to anyone, like the FCC and commercial interests,
>who takes a moment to look at the numbers.

(Translation: If we don't get new hams we're going to have to
swallow a decrease in our salaries. We can all

have raises when all those CBer's come on board
with the new easier licenses!)

>Taking these factors into consideration, the perception of ham
>radio is one of an aging group of hobbyists who use "less than
>state-of-the-art" communication techniques. We may not like that
>perception but that is what it is in many circles of the
>communications industry.

(Translation: Guess improvements in transmitter & receiver design
and DSP don't count as state-of-the-art if the
transceiver is sending CW!)

>The changes proposed by the League are not the total solution to
>the problem. We still have to make an effort to move into more
>advanced communication techniques in the near future. We need to
>take advantage of some of the more cutting edge modes of digital
>communication to allow for more efficient use of the spectrum.
>The Board of Directors is aware that merely restructuring license
>classes and modernizing the CW testing requirements is not the
>whole answer.

(Translation: If we must destroy ham radio to save it, then we'll
do it! Our jobs are at stake!)

>The League is going to have to take the lead in promoting
>technological advances within amateur radio even if it is just
>stressing the idea that amateurs put to use in amateur radio some
>of the techniques used by the commercial services.

(Translation: We can't promote technological advances now because
that darned CW mode keeps getting in the way.)

>And it's not just the League that needs a different mindset to get
>us into the next century with a vital amateur radio. For example,
>we might persuade repeater coordinators to give priority to
>sanctioning repeaters that are going to be using advanced digital
>modes rather than the 50 year old narrow band FM mode.

(Translation: Hmmm, We still can't figure out how to get hams to
accept the current new modes. We'll just say we're
working on it.)

>We might even persuade radio manufacturers to market HF radios that
>use other modes than CW and SSB as the primary modes of communication
>below 30 MHz. There are digital techniques that can be applied to
>the amateur service that would make more efficient use of the
>spectrum and minimize the interference potential between stations.

(Translation: We know a CW signal takes less bandwidth than other
modes, but we'll throw out this bullshit that there
might be other modes that are more spectrum efficient
than CW and see if anyone buys it!)

>I suppose the bottom line is we in amateur radio have to start
>thinking about the future and where we want amateur radio to be
>in the future.

(Translation: If our ham bands sound like CB channel 19, who cares?
At least we'll have more members.)

>Changes within ham radio have been suggested for quite a number of
>years. The pressure for change has been building. The FCC has had
>a continuing stream of proposals from individual amateurs to make
>significant changes over the last ten years or so. The League, for
>various reasons, has resisted such change, myself included. However,
>I think the proposal the League recently adopted will move us as
>amateurs in the direction we need to be going.

(Translation: Just send in a FCC 610 form for a Ham license. No
test required!)

>I also have to make a comment about the "motives" of the members of
>the Board in making such a proposal. Some have said the move was
>to make sure more radios were sold. Some have said it was to
>attract more members to the League. I can state without any
>hesitation that the Board acted in the best interests of amateur
>radio and for no other reason. Most all of the members of the Board
>have been amateurs for 35 years or so and some even much longer.
>These are not people who want to see amateur radio be hurt in
>any way. They don't spend 30 or 40 hours a week working on amateur
>radio matters for anything other than the benefit of amateur radio.

(Translation: We're concerned about our pocket books, and are as
crazy as Wayne Green.)

>I don't think there is anyone on the Board who cares how many radios
>Yaesu, Icom or Kenwood sell. Those companies are involved in other
>commercial activities and the amateur radio segment of their business
>is not large to begin with in the context of their entire commercial
>enterprise. If one or more of those companies should leave the
>amateur radio market, some other company will fill the void and market
>amateur radios. Of course, that assumes there is an amateur radio
>service.

(Translation: They'll pay us lots of Dollars to advertise in QST.)

>The League would certainly like to have more of the amateurs as
>members.

(Translation: But CBer's are just as acceptable.)

>I certainly don't dispute that. But that doesn't mean it
>will benefit any person on the Board if the League has additional
>members because we are volunteers to begin with. We don't get paid
>and we certainly don't get any bonuses if additional members join
>the organization. It actually means the League can provide more in
>the way of services to the members more than anything else.

(Translation: Our easy license proposal will make thousands of CBer's
feel welcome.

>The changes proposed by the Board are needed. Other changes along
>the lines that I mentioned are also needed for the amateur service
>to continue to be a growing, valuable service.

(Translation: More mindless Bullshit! We haven't a clue.)

>I would hope that you would consider these factors in assessing
>the need for and the effect of the League's proposal. There's no
>reason the changes are being suggested other than they are needed.

(Translation: With our proposal ham radio as we now know it will
be dead in five years and our ham bands will sound
like CB.

>I have resisted engaging in any debate about the pros and cons of
>CW and how it is or is not a filter for "quality" amateurs getting
>on the HF bands. There are plenty of people who will spend hours
>and hours debating that subject. I don't. Not only that, it misses
>the whole point of why the Board suggested the changes it did. If
>you have an urge to do that, I can suggest some internet newsgroups
>where that debate has been raging for years and with no satisfactory
>conclusion I might add.

(Translation: I won't argue with the hams who want the best for
ham radio, they always win!)

>Incidentally, I have drafted this response to send to a number of
>individuals who have written or e-mailed me on the subject of the
>restructuring and testing proposal so if a ham friend says he
>received the same response or it appears in electronic form
>somewhere, that is the reason.
>
>73, Rod Stafford W6ROD

(Translation: Send me your E-mail address and I'll pile this
Bullshit on you too!)

Dove is not currently active, although there are still some ongoing efforts to get it going.

UO-11 is active, but does not use AX.25 protocols, so a standard TNC will not decode the data. Take a look at http://www.users.zetnet.co.uk/clivew/oscar11.htm

I stand corrected - this is the reply i received from Dr Williams, of the GSFC, Greenbelt, MD
99-01-05 15:26:08 EST
From: dwilliam@nssdc.gsfc.nasa.gov (Dave Williams)
To: GSteve490@aol.com

Both the Lunar Module and Service Module reentered the Earth's
atmosphere and probably partially burned up with the surviving pieces
ending up in the Pacific Ocean. The LM was targeted in deep water off the
coast of New Zealand.
Dave

I'm kind of happy about this, perhaps someday, mankind can undertake a venture simalar to Ballard & the RMS Titanic.
if we havent already.......

again - i stand corrected

There won't be a lot to locate. THe LEM was mae of very thin
material, and hit the atmosphere at a speed of 24,000 mph. SHe broke up
and the particles incinerated in the upper atmosphere.

If you want a LEM, there is the possibility that the Apollo 10
LEM, which was put in solar orbit, may be recoverable one day, if it
hasn't been cascaded into the sun.

The tripmate output NEMA and works well
(Just short pin2 to Pin3 and it will self start

The Earth mate outputs only binary at 9600 baud
No one in the APRS group has made it change modes
and work with APRS.

You still can find the Tripmates but a used Garmin-45
would be cheaper and has a display.

Dear CBRambo,

Please take your Morse code rhetoric back to CB land. This is a Satellite newsgroup. Morse code, while useful, is not the issue for this newsgroup. Keeping the US Amateur VHF & UHF frequency allocations which these birds operate on is.

KC8FRJ
Christopher Cox

P.S. Congratulations, your mindless banter is working, the number of licensed amateurs in the US is down in 1998. The FCC will just auction of the hobby's frequency's following it's demise.

Hi Geert,
I haven't been able to monitor Mir the past several days (I've been sick as a dog) but it could be that they are just down temporarily. Here's the elements for Mir I got yesterday:

MIR
1 16609U 86017A 99005.56676827 .00021774 00000-0 17990-3 0 939
2 16609 51.6581 96.4369 0010535 320.6742 39.3462 15.70174489735823

Keep listening my friend! Packet weekdays, SSTV weekends is what I'm hearing from others.

73,
Tom

Marc,
The freq is 145.985 and they rarely work voice. It IS possible to work
Mir voice with a vertical, I''ve done it with a Ringo Ranger and 50 watts. In
1997 I talked to John Blaha. You'll need luck to work them voice. They are in
packet mode MOST of the time and have been playing with SSTV.

Source record: 14091

It once was very possible to work MIR with just a 5/8 wave mag-mount and an HT (they have a great line-of-site thing going on up there.) Unfortunately, the "Glory Days" of MIR are all but over. Generally, the crew is wrapping-up their regular operations on the station that soon will be abandoned. There will not likely be any further Ham-related communications with MIR on voice, although, I have heard the 2m packet robot may still be working but not in a QSO mode.

Although voice contacts are now rare the packet system is still VERY active and NOT a robot. Mir is also testing SSTV as well. The station is hardly "all but over". Plans are in the works that may keep it up another 3 months past this early summer, although at the moment that isn't firm yet. I hope she stays up as long as possible with causing much risk to the crew. Mir so far is the most successfull space station ever placed in orbit and she's done a FANTASTIC job FAR past her intended life span. The Russian's should be VERY proud of her. I am.

82. How do you predict when a sat is in darkness?

Newsgroup: rec.radio.amateur.space
Date: 1999-01-08 00:00:00 UTC
From: JayCee <jaycee@nospam.demon.co.uk>
Message-ID: <18mACCAQ0ll2Ewcc@midmarsh.demon.co.uk>
Source record: 14093

As many of the amateur sats have u/s batteries and only work when they get sufficient sunlight is there a way of predicting when they will be in eclipse? Apart from the times they are on obvious night time passes that is.

As they move at various different heights above the ground just looking at a pass on a sat tracking prog doesn't seem to help, not to me anyway.

I have seen predictions for AO-10 as to when it likely to be silent and wondered if there is a program for the PC which can perform the calculations?

What makes me bring up this subject is my inability to hear the 29MHz beacons from RS12/13. I'm assuming they are still working and didn't used to have any difficulty hearing them when it was last in mode KA. Maybe the bird is being eclipsed on its passes over / near the UK at the moment? At the times I am monitoring it is a few hours into daylight here in the UK.

Perhaps when the Russian's abandon her maybe they can configure her as
an active orbiting repeater for the rest of her days? We can hope.

My Traksat program is set to display the area of Earth that is in line-of-sight of the satellite; it also set to display the solar terminator (the line between day and night). The daylight side of the terminator is essentially that portion of the Earth's surface within line-of-sight to the sun.

The rule is simple: if the area of the satellite LOS shares area with the solar LOS, then the satellite is in sunlight. (According to the set-theory arithmetic terminology, the areas "intersect.")

Has anyone developed any hardware/software that allows controlling the frequency of any of the low cost 10M only SSB rigs for the RS birds?

It would look like only the three least significant digits would need to be controlled. I am using The Station control program with my IC-821H and it would be nice if I could also control the RCI-2950 that I use as the 10M receiver.

Mike - K9JRI

Dear All;

Thanks for reading this message. I have two questions about WISP.
First, I purchased the 16 bit version for Windows 3.1 and it is registered (#771435). I now have Windows 95 and have downloaded the 32 bit version. It is not letting me register under my old number. Do I have to purchase a new version in order to register?
Secondly, According to the help file, I am missing two files from the version I downloaded (from the AMSAT website). First is PKUNPAK.PIF, and second is WiSP-TLM.EXE. Is there any reason I would have missed these when I downloaded them?
Thanks in advance for your kind help.

Some better satellite tracking programs output an indicator that tells
if the satellite is in sunlight or in darkness. Some also indicate
whether the satellite is visible (= satellite is in sunlight, observer
is in darkness)

Can someone recomend a good starting place for someone new to satellite communication? I currently have a 2 mtr all mode, and HF/50mHz. all mode radios. All my antennas are omnis and vertically polarized. What would be an easy (if there is such a thing) satellite to operate first time around. I don't have any digital (TNC etc.) equipment so a SSB/CW or FM would be the only possible modes. I would prefer SSB. Also can someone explain the satellite mode designations? I have looked everywhere on the web and in ARRL publications and can't find an explination! Please reply via email if possible to: n8psm@qsl.net

Thanks,

Paul

Accurate time is important. It is equally important to precisely know the location of something in the system. In the case of GPS, the location of the GPS bird is known. In the OSCAR ranging (where they presumably want to measure the orbit: know the location of the bird), the location of the ground station is known.

If you don't know where anything is, only how far away it is, then you don't know where anything is! (That's a tautology!)

Dear Paul:

A good place to start is the AMSAT website (www.amsat.org). There is a ton of information there that will help explain things like Mode designations and things like that. By the way, a Mode designation is just an easy way to describe which bands are being used for the uplink and for the downlink. For example, Mode A describes using 2 meters for the uplink, and 10 meters for the downlink. I think there is now a movement away from the old designations (such as Modes A, B, J, etc.) and towards designations that are more descriptive. For example, Mode J (which is 2 meters up and 70 cm down) I believe is now referred to as Mode V/U (I may have those reversed but the V is supposed to stand for VHF and the U for UHF). Wouldn't you know it but I just get down the old designations, and they go and change them on me.
As for the best place to start, a Mode A bird would be compatible with your equipment, and is certainly the easiest type of satellite to work. Unfortunately, the only Mode A satellite currently operational of which I am aware is RS-12/13, and I am not sure of its current status (it may not be accepting 2 meter uplinks right now). Hopefully, someone else monitor this ng will respond and let you know. Another way to find out is to subscribe to the AMSAT news service. This will give you a weekly summary of the operational satellites, and which modes they are currently operational.
I hope this was of some help. And don't worry, if an idiot like me can get on the satellites, anyone can.

STSORBIT Plus does both. Visual on the map it shows sunlit and night side portions of the earth (with a yellow line) and the pass table shows if the primary tracked sat is visible.

73,
Tom

Well, let me think. Speed of light = 3x10^8 m/second. So, if
I had a clock that was accurate to say, 1000Mhz, that would be
3x10^8/1000x10^6 meters or .3 meters, or 30 cm, which seems about right.
About a foot would be a nice goal.

1000Mhz seems doable -- especially if you could have a ground station upload a recalibration every few passes or so. As for the position of the satellite, it seems like the satellite could tell ground stations where it is. Maybe have a command station upload a new set of keps elements every few passes. Users download the keps, and then they know where the thing is.

Still, ooh, there are a few non-obvious issues to me. Like, what is involved in predicting the position of a satellite, to say, within one foot. Are the programs and algorithms in 'ham radio' software accurate to that kind of level? Or maybe there's a fundamental problem that there's just too many 'random factors' to predict something at this level.

RS-12/13 (they are both onthe same craft but use differant sets of equipment) would be a good one to start with . You transmitt lsb on 2 meters and listen on 10 meters usb.
Go to amsat.org and get the frequencies and download a tracking program and the tracking elements you will need for the tracking program.

You might want to string up a horizontal dipole for 2 and 10, but the verticals will probably work just as well.

113. Need schematic and information on FT-736R power supply

Newsgroup: rec.radio.amateur.space
Date: 1999-01-11 00:00:00 UTC
From: Jim.Hansen@stpete.honeywell.COM
Message-ID: <208136F43899D2119A5B00805FCCF971380458@fl51m02.stpete.honeywell.com>
Source record: 14027

I need a schematic and information on common failure modes of the FT-736R
power supply.
Mine has gone bad and I will be repairing it myself.
Visual examination reveals a small transistor that has cracked do to
excessive heat and a medium size aluminum electrolytic that shows signs of
having been too hot.
The standard schematics for this radio do not include the schematic for the
power supply.
The schematic only shows it as a box with the model number (FP1274A) on it.
I have heard that this power supply suffers from a common weakness and that
some European gentlemen has published a fix to resolve it.
Any information and/or a copy of the schematic would be greatly appreciated.
You may Email me directly at Jim.Hansen@nospan.stpete.honeywell.com
(Remove "nospan." from the Email address)

Thanks in advance
Jim

Yes, the station is far from over, the glory days of ham radio within MIR pretty much are. They still do some, but not the way it used to be. It's always worth a try.

> tautology!)

Of course: you know the distance from you to the satellite, but
that tells you nothing if you don't know where either end of the
measuring stick is.

Even if you know where the satellite is, you'll need more than one
distance measurement, and you'll need to know the location of
each satellite at the time of the measurement. GPS requires this
too: the only difference is how to measure the distance from the
observer to the satellite. The choice remains: an active trans-
ponder that only needs to measure transit time, or a passive
system that needs high-precision (atomic clock) timekeeping.

On an amateur budget (at least on mine :-), it's much easier to
measure the round-trip time to a few parts per billion than to know
what time it is to similar accuracy...

If you don't receive the AMSAT Journal (shame!), you can download
the article from AMSAT-NA's web site.

Check the ones listed at http://www2.satellite.eu.org/sat/vsohp/orbsoft.html
STS Plus is probably one of the most popular if you want graphics. SkyMap
is also excellent, and Quicksat is very popular with observers who
need only tabular output.

Someone posted a 70cm freq for Mir recently. I wrote it down on the disappearing post-it note.

Please see:

http://www.amsat.org/amsat/ftp/news/ans.new

For the current status. Note that 'semi-operational' may mean that the equipment is known to work, but just isn't used very often. I have not heard any reports of activity on the MIR/SAFEX repeater, for example (and would welcome any news of activity there). Although there's talk that this might change, most activity i've heard of is right now is on 2 meters, with SSTV heard often on weekend passes, voice heard rarely with no specific schedule, and with packet on the rest of the time.

-- KD6PAG

MIR/SAFEX
SAFEX II 70 cm Repeater
Uplink 435.750 MHz FM w/subaudible tone 141.3 Hz
Downlink 437.950 MHz FM
Semi-operational.

SAFEX II 70 cm QSO Mode
Uplink 435.725 MHz FM w/subaudible tone 151.4 Hz
Downlink 437.925 MHz FM
Semi-operational.

PMS
Uplink/Downlink 145.985 MHz FM 1200 Baud AFSK [SSTV on weekend. -- 'PAG]

Yes, the station is far from over, the glory days of ham radio within MIR pretty much are. They still do some, but not the way it used to be. It's always worth a try.

Right, most of the activity, over the 'States at least, was by the U.S. astronauts and that program has moved to the Internation Space Station. So be patient, that'll be up fairly soon. There are also two J-FM birds scheduled to go up in September (one should be stronger than AO-27, the other will be a challenge to work, like RS-15), and a 'parrot' repeater planned to go in the next week on SUNSAT. So there'll be things to do in the meantime. The cosmonauts have made voice contacts, it's been just pretty rare so far. But lots of SSTV activity lately, perhaps that's because there's less of a language barrier there.

Hi,

The efficiency issue may have to be address if one
or both of the following takes place.
1. The number of hams increases significantly.
2. The FCC removes spectrum space from our
allocations (2M, 70cm...).

Like using the lowest power to carry on
communications, one should use a mode that is
appropriate for the communications bandwidth.

As to reducing the number of license classes, my
real concern is that a simple entry level exam be
provided. Back 35+ years ago I started with a
Novice license. The test was about the upper
limit of what I could handle at the time. One
year later I passed the Technician. I now hold
an Advanced. At the minimum we should have a
MF/HF license and a VHF/UHF license plus an
entry level license.

The ITU requires testing for CW on MF/HF. When/if
the ITU changes, the US could remove that
requirement.

Send in five boxtops from your favorite breakfast cereal and get a free ham license.

ARRL is to blame for the poor state of amateur radio. The ARRL board should go and dig up Hiram Percy Maxim and apologize to him.

It's best to use unproto mode with Mir if not connecting to the PMS.
Connecting to others via Mir is frowned upon as it messes up Mir's packet
station and slows everything down.

Most likely he means that Arianespace claiming "Satellite manufacturers'
failure to deliver their payloads when promised will disrupt activities
of the Ariane rocket launch company in 1999 for the second straight
year, officials said Saturday." is quite hilarious.

Satellite manufacturers and users will probably be claiming that
"Arianespace failure to deliver their Ariane 5 launcher when promised will
disrupt activities of their companies in 1999 for the third straight
year."

Always easy to blame someone else, I suppose the ARRL has some way of
controlling personal behavior like, jamming, foul language, discourteous
operation etc.?

Since your blaming the ARRL, perhaps you could enlighten the group and tell
us specifically what they have or have not done to put amateur radio in a
"poor state"

This is too funny for words.

from http://www.cnn.com/TECH/space/9901/11/ariane.delays/

Ariane launcher foresees delays in getting satellites

January 11, 1999
Web posted at: 12:57 p.m. EDT (1257 GMT)

CAYENNE, French Guiana (Reuters) -- Satellite manufacturers' failure to deliver their payloads when promised will disrupt activities of the Ariane rocket launch company in 1999 for the second straight year, officials said Saturday.

"We are always going to have the same problems with the delivery of satellites. We should have no illusions about that," Arianespace President Jean-Marie Luton told a news conference.

"As I see things, we are going to have the same kind of scheduling problems as in 1998, notably many more launches in the second half of the year than in the first half of the year."

"We will have to adapt our launch calendar to that of our clients, who do not necessarily respect their contracted delivery dates," Luton said.

He said Arianespace was targeting up to 13 launches in 1999, but the exact number would depend on satellite deliveries.

The Paris-based company launches the highly reliable Ariane-4 rocket series from the European Space Agency (ESA) launch center in Kourou, French Guiana, on the northeastern coast of South America.

After three test flights since 1996, it plans to put the more powerful Ariane-5 rocket into commercial service this year. Three Ariane-5 missions are planned.

Despite 11 textbook launches in 1998, operations were irregular.

After four missions between February and April, launches were halted until late in August, as no satellites contracted for were ready for launch. The company ended the year at a frantic pace, with five launches in the last quarter, when the satellite holdup eased.

Virtually all the world's suppliers of satellites were to blame for the irregular
scheduling.

Communications operators pushed for ever-quicker delivery of satellites in 1998.

Specialists said Hughes Space & Communications, the world's leading supplier of large communications satellites, was reconsidering production methods after a spate of in-orbit failures by its 601 series satellite.

Lockheed Martin has targeted a 12-month production cycle for its spacecraft, an objective previously considered too rapid for reliable in-space operations.

There's one satellite down in the Florida or North Carolina (I think) area
just waiting for it's chance to get into space. It's called P3D.

I get it Jeff, just have to look back a little. P3D supposedly was not ready because of new flight parameters thrown in at the last moment by the ESA. It really is hard to tell just what the ESA is throwing at the satellite manufactures, particularly since it would appear blame/finger pointing is now going on.

I personally am happy we did not ride an Ariane5 into the ocean or into a poor orbit. It is my hope that P3D gets a Delta / Soyuz / Ariane4 push, something with a proven track record..... But beggars cannot be choosers.

Agreed, it seems to me after all these years of listening though, that the Authorities have a LOT to answer for because their lack of ability(for whatever reason) to trace the offenders and remove licenses !

Ham and CB radio are slowly starting to look the same to me and will I think if both the serious users and the Authorities do not take the problems more seriously and start getting rid of the offenders .

just my 2 pence worth.

I just read an article in last year QST about this satellite Sorry don't remember what issue though. If I remember correctly this satellite turns itself off when orbiting the dark halves of the earth to conserve power.

This article caught my attention because it also talked about how this can be worked by using just a dual band HT.

Hope that helps

SUNSAT is an amateur satellite built at the University of Stellenbosch in South Africa.

It is scheduled forr launch at about 10:39 GMT on a Delta II launch out of Vandenberg Air Force Base (Californian) today (15th Jan 1999).

Take a look at:

http://www.boeing.com/defense-space/space/delta/delta2/argos0199/

and

http://sunsat.ee.sun.ac.za/

I've kind of worked it with a Ic-W32A however a handheld beam (the Arrow) is
recommended with a duplexer. A pre-amp is needed as well becuuse the signals
are weak. I have yet to get these for myself though. I've had several others
hear me on the bird but was not able to have a normal quick qso because
signals were weak.

155. Launch-Delay Argos & Sunsat

Newsgroup: rec.radio.amateur.space
Date: 1999-01-15 00:00:00 UTC
From: Medical Assistance Radio NL <mar_nl@wxs.nl>
Message-ID: <77o808bkk1@reader3.wxs.nl>
Source record: 13969

Strong upper-level winds have delayed the launch of a Boeing Delta 2 carrying three satellites early Friday, January 15.

The Delta 2 was scheduled to lift off from Vandenberg Air Force Base, California, at 5:39 am EST (1039 UT) Friday. However, high upper-level winds in the flight path of the Delta 2 forced a launch delay. The launch has been rescheduled for Saturday, January 16, at 5:39 am EST (1039 UT).

The primary payload of the Delta 2 is the Air Force's Advanced Research and Global Observation Satellite (ARGOS) Its nine payloads will perform upper atmospheric observations and technology demonstrations. Experiments will range from tests of sensors planned for use on the International Space Station to studies of orbital debris.

Two smaller satellites will also be launched on the Delta. The Oersted satellite, from Denmark, will study the Earth's magnetic fields and electrical properties. Sunsat, a microsatellite built by the University of Stellenbosch in South Africa, will perform remote sensing and amateur radio experiments.

The Delta launch had already been delayed one day to correct communications problems between ARGOS and ground equipment.

AO-27 operates only when in sunlight.... last I knew, the schedule for orbits passing over the US was that the transponder came up 18 minutes after it entered sunlight, and remained on for something like 22 minutes. The schedule always used to appear in Space News, which I haven't seen on here for several months. I have successfully worked it with 1-1/2 watts into an Eggbeater (using a dual-band HT), although I had much more luck with 100 watts (lots of competition).

Paul, I missed some of the earlier replies now deleted so this may be redundant, I just recently put a sat station on the air using an old Ameco 2m transmitter and HR-2600 for receive. The only two birds currently in mode A are RS-13 and 15. 13 is easy to hit with a vertical but depending on your radiation pattern from the antenna you may see a sharp null if the bird passes directly over. I'm running about 20 watts out to a Cushcraft ARX-270b and a dipole for recieve. I have the best signal when the satellite is at a low angle, or at the edge of the horizon, but 20w is plenty. I have heard some signals on 15 but have not successfully hit the bird with my arrangement. But 13 is very active. A tech license is all thats required since it's 2m up.

oops, here comes 13 now, gotta go. (beacon on 29.458MHz)

John, RS-10 is turned off so you wont hear anything there, not sure what mode 12 is in right now but I don't think it's in Mode A (assuming your listening on 10m) RS-13 is on and has a downlink of 29.460 to .500 and a beacon on 29.458 try listening to that bird. Also double check your clock! Some of the sat track programs add or subtract from your computer clock to come up with UTC so if that setting is incorrect you could be hours off.

RS-10/11 is dead, so you won't hear it. You should be listening for RS-13
(RS-12/13 is the same satellite, different transponders) - the RS-13 beacon
is at 29.458 MHz (much published data is wrong).

Things to check in Instatrack:
- make sure you have your station location set and correct lat/long (you are
negative longitude = west)
- set the DOS environment variable for your time zone.
- make sure you have good ephemeris (download latest bulletin from arrl or
amsat)

If you are still having trouble, email me your lat/long info, and I'll run
some passes for you and maybe you can use that to debug your problem.

I have been active on the RS satellites, the FO birds, and AO-16 and
Lusat-19. However, I never could work AO-27 with my Eggbeaters because the
Eggbeaters do not display proper polarization for it. I could just barely
hear it. Read AMSAT Journal for March/April 1997 which contains an article
by Chuck Duey, KI0AG, which indicates that, when AO-27 comes over the
horizon, you need to point the 70 cm antenna elements vertical.
Following Chuck's article, and using an Arrow antenna with an Alinco
DJ-G5 dual band HT, I was able to make my first AO-27 contact today. It was
really a thrill, even though I've been working satellites for almost 6
years.
I encourage all to try it.

Hello all,

I was in the bookstore today and went to buy the book titled "Dragonfly: NASA and the crisis onboard Mir". Thinking it was $26.95, instead it turns out to be 40 BUCKS! (CDN) now that's a lot of cash, is the book worth the buy?

I know people in here about a month ago were talking about it, and just wanted to make sure the book was worth buying, before I did.

Any input, would be really appreciated.

>Anyone got any further details? Anyone worked it?

PANSAT is up. It appears to be reasonably healthy, though battery temp
is reported to be a bit lower than expected. That may require a different
power management strategy because battery capacity is reduced at low
temperatures.

The latest word is that the operators of the satellite are now turning their
attention to providing ways for amateurs to access the satellite. The first
thing that they're going to do is arrange for the satellite to beacon in SS
so amateurs can get experience acquiring synchronization and copying
the signals. Later, amateurs will be told how to transmit to the satellite as
well, but that probably won't happen for a while.

You know you're going to have to build something to use this bird, right?
It is SS, and there's nothing available off the shelf that will work with it.

I will be ordering 'Dragonfly' for myself - I have been told by several
people that it is a good read.

I look after the computers for a local bookshop/publisher - the
wholesalers price is usually 25% to 35% less than the list price (to a
small bookshop - big chains get better deals; up to 70%) We can offer
10% to 15% off the list price on more expensive books but this may not
be much use to you unless you live in the UK, P&P being expensive to
Canada or America.
If anyone is looking for rare or hard to find Space or Radio related
books email us (Clare@scarthinbooks.demon.co.uk,
www.scarthinbooks.demon.co.uk) and I can have a look on our catalogue;
which lists just about all English language books available (and some
French and German) or our second hand stock. We tend to have a good
selection of space/science/astronomy books because Dave, the Boss, likes
them although most of the staff like New Age stuff (A waste of shelf
space in my humble opinion).

The big Internet bookstores may also do it at a discount of 20% if you
are lucky.

(I apologise if this is too much of an advert).

I'd say get it from the library unless you are a serious space weenie. (Which I am, so I bought a copy. 8) I doubt that you'll want to re-read it, IMHO. And I don't think it is particularly useful as a reference. If I had to buy one Mir book I'd go for Harland's. If I had to buy one Shuttle book it would be Jenkin's (or maybe Harland's). Your mileage may vary...

Yes, it is worth buying. However try Barnes&Nobles.com and Amazon.com on the web, cheaper! Lots of inside info on what the astronauts went through training in Russia and what the crews went through on Mir.

Tom

184. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-01-18 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <77ultf$sel@news.Hawaii.Edu>
Source record: 13994
Cross-posted to: rec.radio.amateur.space,rec.answers,news.answers

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, WH6U, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your

article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Source record: 13996

IT IS ACTIVE ON POLAR ORBITS USALLY AROUND 1200 HRS. USALLY FOR 2
PASSES CHUCK. KD6RSQ

Actually, it's in a sun synchronous orbit and is operational two times a day (maybe three times if you can work close to the horizon) between roughly 09:00 and 12:00 local standard time over the middle third of the northern hemisphere, irrespective of where you live. So you should be able to work it just fine over Siberia, for example, if you can find someone else to talk to over there. Here in the 'States, it can be a mob scene on weekends and certain transcontinental passes. Of course, use UTC when setting up a sked...

Beginners should start with weekday passes if at all possible, expect lots of people to be on in the Northern Hemisphere and don't necessarily expect to hear your own downlink. The regulars usallly make a point of answering newcomers, so you'll know quickly if you're making it into the bird. Above all, don't transmit if you can't at least partially copy callsigns.
-- KD6PAG

P.S. Look for me next weekend operating QRP out of an unusual or perhaps even a rare grid square if weather permits.

I came across a web site that I know will be of interest. Sven Grahn is from Sweden and has been following the space program(s) from the very beginning. His web pages describe his tracking activities - everything from listening to the early Sputniks (with a Lafayette HE-30) to receiving signals directly from astronauts on the moon (using an R-390 as part of the apparatus). There are also some great articles on the Kettering Group, that intrepid bunch of English schoolkids who were on the cutting edge of satellite tracking efforts in the early days.

Check it out:

-73 de OZ1SKY, Brian Hougesen.

Yes RS-15 requires good antennas and a very hot 10-meter receiver. You need at least 100 watts ERP for 2-meter transmit and a dipole or loop with a pre-amp on 10-meters.

Visit http://www.amsat.org/amsat/sats/n7hpr/rs.html for more information.

192. A WHITE PAPER ABOUT ARISS

Newsgroup: rec.radio.amateur.space
Date: 1999-01-19 00:00:00 UTC
From: Will Marchant <kc6rol@amsat.org>
Message-ID: <36A53A12.5FFACBF4@amsat.org>
Source record: 13906

I've posted the following at Roy's request... You may reach Roy by
email at k6due@amsat.org with comments or questions...
Will

==========

A WHITE PAPER TO ARISS ON:

AMATEUR RADIO AND THE INTERNATIONAL SPACE STATION

Society can function only if it has some general rules
to govern the conduct of the humans on our world. Otherwise there would

be chaos as a few people take over, insistent on doing anything they
want to do whenever they want to do it.

Amateur Radio mirrors that concept. It has international

rules, set up and kept in place by individual national authorities and
supported by the individual societies of the International Amateur Radio

Union. We have lived under that system since radio began. The intent
was not to restrict activity but to channel it, to maintain some
semblance of sanity.

The International Space Station (ISS) will be a separate

world, 200 miles from earth, requiring organization to keep peace among
the nations that build it and live aboard it. If hams from eight
nations all tried to go on the air from the ISS at the same time, using
eight different radio stations, can you imagine the QRM?!

Until now, in space we have seen each nation as a
separate entity.The MIR Space Station is Russian. So are the Vostoks.
The space shuttles are American, as was the Space Lab some years ago.
French and Chinese booster rockets have orbited unmanned satellites.
But the ISS is a multi-national operation.

NASA realized this and asked SAREX to go to the Amateur
Radio fraternity to develop an international governing body; a group to
set up rules and regulations, and to determine and procure equipment
that will work compatibly with other technology in space.

Complying with that NASA request, representatives from
the IARU and national organizations of eight nations met in Houston.
They came from Germany, England, Canada, Italy, Japan, Russia, France
and the United States. These countries are directly involved with
building the space station. They agreed with the concept, and their

elected officials signed a Memorandum Of Understanding to that effect. They named the new, international organization ARISS, Amateur Radio International Space Station (ARISS).

Since that time, the amateur radio representatives from these nations have again met together, planned together, and proceeded in good

faith to design a master station complete with SSTV, compressed ATV, packet and plenty of voice hardware. The results thus far have been outstanding. Each country, is contributing in its own way, toward making the station a reality. For example, the Italians have agreed to develop and build antennas, the Germans have already built and demonstrated a voice repeater, the Russians have agreed to provide and have installed antenna feedthroughs on the Service Module and the United States has flight-ready voice and packet hardware made and tested. The groups are also working on frequencies and general rules of operation. When the first crews arrive, to inhabit the space station, amateur radio will be there!

I am chairman of the Space Amateur Radio Experiment (SAREX) here in the United States. We coordinate the efforts of AMSAT, ARRL and NASA for Human Amateur Radio in space. We first flew in 1983, when W5LFL, Owen Garriott, talked to the world, and the world listened and talked back! Since that time, SAREX has flown dozens of flights in space shuttles, and coordinated school contacts for astronauts on Mir. Currently, more than 80 astronauts have Amateur Radio licenses and they have made contact with thousands of people all over the world.

At this time we are at an impasse: for the next few years the astronauts and cosmonauts will be assembling the space station

in orbit, and will be too busy to do much hamming. We have a working arrangement with NASA so that when there are even a few minutes to spare, ham radio will be kept in the schedule.

I have been distressed by the recent actions taken by some individuals. They are waging a war on our international cooperation. They have sought to destroy the international effort and discredit members of the ARISS team.

They have sought to fragment the amateur radio community

and circumvent the rules of conduct by which we all operate.

They have preyed upon the situation of some of the ARISS

partners to their own benefit.

And their recent projects disregard the tremendous efforts put forth by well-respected explorers in the amateur space community.

Their recent SSTV experiment has enjoyed success (and no

one disputes that), but it should not be at the expense of the amateur community or the reputation of others. SAREX believes that their actions are endangering the future of ham radio in manned space flight.

Recently, the German ARISS team members, SAFEX, sent out

an e-mail, expressing their indignation at some of these recent actions

and statements. Germany is one of the most loyal supporters of Amateur Radio in space, including a major role with Phase 3-D. SAREX joins SAFEX in being distressed at the contention these people have caused.

NASA and its partners have enough problems putting together an international space station. NASA does not want or need problems with Amateur Radio. These individuals have written messages saying they plan to create such problems if they don't get their way. I

write in the hope that they stop before it is too late. More important,

I write in the hope that you, the Amateur Radio operators of the world, will support a more mature approach.

Do not trade the future for a few slow scan images today. Enjoy the SSTV, but do not be misled. These people know what ARISS has planned. They were even given a seat at the table, as consultants during the first ARISS meetings. Unfortunately, they apparently have little appreciation for the complexity, level of detail,

and effort required to ensure a permanent Amateur Radio presence in space. In addition, they ignore the fact that frequencies are coordinated on an international basis to minimize interference to other operations and to onboard equipment. These people have demonstrated their willingness to flout the coordination program by announcing that the SSTV system will continue to operate on 145.985 MHz instead of the 70-cm frequency coordinated for that purpose.

ARISS organizations include the many IARU and AMSAT worldwide chapters, such as AMSAT-NA, ARRL, DARC, ARI, JARL,JAMSAT, RSGB, RAC and many more. We intend to live by the rules. They want to go their own way, and not follow the rules. These other people's expressed intent is to do whatever they want to do whenever they choose to do it.

We are nations of laws, and appreciate the dangers of such anarchy, when a cooperative multinational effort is needed. And squabbling, rather than cooperating, will cause NASA to eliminate amateur radio from its plans.

In the near future, ARISS plans to start a series of news releases. We will not indulge in a war of words. Indeed, this is the last time I intend to "go public" on this matter. I believe the time has come to turn off the nonsense and turn on the common sense. I do not plan to get into a contest of words which no one can win. Shortly, NASA and ARISS plan to hold some important meetings at the Johnson Space Center, in Houston. They are intended to establish

approval of station planning and give us a timetable to the future. That will be the basis for our releases. We plan to make a series of major reports on our plans at that time.

The ARISS team welcomes participation by all. ARISS was

established to enable all to participate. Your contributions will be valued and appreciated. Good ideas will not be rejected. There is a process established to coordinate the international effort. Suggestions, proposals, and experiments should be submitted through your

national amateur radio organizations to the ARISS team. Once evaluated and assessed for the level of effort required, your ideas can become a reality and be flown. The station, as planned, will provide a platform for participation by all amateurs. It will truly be a station of, by, and for the amateur community.

I sense that a massive flame war, is on the threshold of birth. It can
be a beautiful thing -- in a dark way.

(For the life of me I don't have a clue what these people are arguing about --
This didn't really come from ARISS, did it?)

I guess if I read between the lines it is the Russians that is the
problemb , they are the ones in with there fngers on the vfo.
I (myself) would trade any further sstv picks from mir to achieve a
international sstv program. Why are they not sending on 70 cm?
I read some where where they only have one power supply and they can
only use one band at a time even though they have a dualband
transceiver.Well maybe I dont know a thing about it but announce it on
packet and then on the next pass go to 70 cm. All would be happy .
NOT!
It seems like a small problemb with a easy soulition?
Well not to feer no sstv from mir sence 01/01/99 here just packet .
well it did one good thing i guess I got a packet machine going
so I would have something to dowhile waiting for sstv .
Let us do what is necessary to get amature radio on the new space
station and then abide by the rules enough for now,
I have probably ruffled enough feathers.
IAN if you are reading this what do you think ?
sorry for any misspellings.

Latest News
The second launch opportunity for SUNSAT which was scheduled for 20 January
was postponed due to unfavourable weather and range safety issues less than
an hour before launch.
Next attempt : Thursday January 21, 1999 @ 10;39 UTC

Can someone explain to me how Russian Cosmonauts running SSTV on 145.985 has damaged someones reputation, preyed upon a situation at ARISS, and endager the future of ham radio in manned space flight?

Is there so much activity from space right now that we need to regulate a special event station like MIR running SSTV?

----
20 January 1999
RELEASE NUMBER 99-0107
DELTA DELAY
VANDENBERG AIR FORCE BASE, CA - The launch of a Boeing Delta II rocket
scheduled for launch today at 2:39 a.m. has been postponed due to upper
level wind constraints.
The rocket was slated to lift off from Space Launch Complex-2 on north
Vandenberg to place ARGOS, SUNSAT and Orsted into orbit.
The Delta II launch from Vandenberg is a team effort between the 30th Space
Wing, the Space and Missile Systems Center at Los Angeles AFB, CA, Boeing,
NASA and the countries of Denmark and South Africa.
The launch has been rescheduled for Jan. 21 at 2:37 a.m.
- 30 SW -

Congratulations, then to freeserve for behaving in a perfectly
rational way.

> Seems really something when
>Freeserve allow people to spam our accounts

An ISP does not "allow" people to spam your accounts. There's virtualy
no practical way to prevent it.

>and do not even give you the
>chance to defend your own, and by the way they did not even give me the
>opportunity to explain what happened before they destroyed all the work I
>had been doing with the help files etc.

If a user on one of my servers did what you did, I would have done
preciselly the same thing. Our TOS permits us to terminate a user
without discussion if they violate the TOS.

>Now I have to do it all over again !. BTW I have reason to belive that
>Freeserve are monitoring peoples e-mail sent from freeserve accounts as I
>doubt that the company i sent the spam back to complained as they are the
>original offenders.

They don't have to monitor your e-mail to know that you're spamming
some company. Most ISPs maintain a separate log of mail sent and
received (so they can in some instances prevent your account from
being spammed), and use a log analyzer. If freeserve is as
professional as they sound, their log analyzer probably caught the
fact that you send 100 e-mails to the same address in a very short
period of time.

Also, it is worth noting that if the mail you sent was, for some
reason undeliverable, as is often the case with the return address of
spammers, the undeliverable e-mail notice would have dropped into the
mailbox of postmaster@whateverthehellthenameofyourispwas. So you may
have inadvertently spammed the postmaster at your ISP with 100 copies
of the mail you intended for whatever clod sent you the UCE in the
first place. Our users do this all the time, respond to some useless
bit of UCE which has a bogus reply-to, and then I end up with a ton of
garbage in MY mailbox.

>ian koenig (bouncing around frreserve's accounts as we speak) ;-))

So that explains why your sites down. You should NOT have spammed back
though. Most spam addresses are fake, they probably bounced back to
freeserve's postmaster.

73,
Tom

Neat. Sometimes, I think the poor Russians don't get enough credit for
all this. Who've been actually running a station, while this country
has been burning cash on, oh gawd, Alpha, and Freedom, and what else
is there. Makes P3d look like a huge success in comparison, by
my simple lay opinion. Also I think the zonked out cosmonaut in Armageddon, is
a bum rap. (Among other massively retarded aspects of that movie)

Ian, the way to defend isn't to play the same game they play, you did just what they did in the first place! They sent spam, you sent spam. What you should have done is have your e-mail name changed from ian@kmedia.freeserve.co.uk to something like IanK@kmedia.freeserve.co.uk, the spam would no longer come. Also, use a FAKE e-mail address in your newreader posts in the header and add your REAL address in a sig file or at the end of your post with a EXTRA letter or number in it telling people to remove the extra for your real address. Works like a charm for me since I did it.

Skin the cat the right way! Hope to see your site up again.

73,
Tom

Yeah, risking of the destruction of the ham radio space
program, I downloaded SSTV images. Though my last pictures are all slanted, at
about 45 degrees, though. I'm not sure why. I use w95sstv, and can get pictures
off of HF without trouble. It autodetected as Robot36. Is there a utility
to unslant, slanted pictures? The signal is loud enough to read the VIS signal.
Maybe there's a better program for this?

I have been mastering the system of watching MIR go by on the video monitor, and
twisting the Radio Shack rotor to point the beam towards MIR, in real time,
so the signal sounds pretty clear. Every time it sounded weaker towards the
end of the picture, though I assume it's because MIR is going behind a local
tree or something. Do other people notice the same thing?

I was having trouble myself with w95sstv diffrent from yours .
the first 2 picks came through ok but on the next 2 passes
all i got was screens that loked like you were recording audio not
sstv. i had a good signal strength . the next day i was copying
from 14.230 mhz ok but that was s1 not robot 36.
over the weekend i installed a new motherboard and amd k6 2 300
processor and formated the harddrive and reinstalled software i may
have a problemb with robot 36 but i dont think so the first 2 picks
were great this was sunday did mir send sstv saturday, that was the
day i was changing the computer.
Ian as to your trouble with freeserv good going for standing up for
your self i get the same spam from a certan spammer it says a one time
mailing the next day the same spam diffrent fake return address that
should be aginst the law sending email with a fake address.
Bye for now robert hansil kb9mqh

From: Medical Assistance Radio NL <mar_nl@wxs.nl>
Message-ID: <78kf2n$67f$1@reader1.wxs.nl>
Source record: 13941

Latest News
The launch attempt for Friday morning, 1/22/99, was scrubbed at 02h35 PST (10h35 GMT) due to unmanageable upper level winds. The team was positive through the count as the Range was green for nozzle closures and launch debris however persistent wind shear in the 10K - 12K ft. altitude could not be overcome by Delta II flight control management.
The next attempt was scheduled for Tuesday morning, 1/26/99. The stand down through the weekend was driven by Argos spacecraft servicing and predicted unfavorable weather.At the weather briefing at 0930 hrs on Monday, 1/25 it was decided to postpone the launch by 1 day to Wednesday 27 January @ 10:35 UTC

>I wonder if anyone reading this group could fill me in on
>1. Sunsat's intended orbit

What type of satellite is SUNSAT?

SUNSAT is a low earth orbit (LEO) micro satellite, weighing 64 kg, with dimensions of 45 cm x 45 cm x 60 cm. It will follow an elliptical polar orbit of between 620 km to 850 km above the earth's surface and will circle the globe approximately once every 100 minutes at a travelling speed of nearly 7.5 km/s, or 27000 km/h!

Will SUNSAT be placed into an ideal orbit?

No, SUNSAT would ideally have liked to be placed into a circular and sun-synchronous orbit for optimal imaging performance. Unfortunately, SUNSAT's orbit is dictated by the orbital requirements of the Danish satellite, Ørsted, which receives precedence as it was the first secondary payload to be included in the mission. SUNSAT's orbit will, however, pass through its ideal orbit at certain times, allowing the performance of SUNSAT in the ideal orbit to be evaluated.

>2. Which will probably also indicate the launch direction from VAFB
>(A satellite going into polar orbit would be launched South).
>
Flight Mode Description

Launch from VAFB SLC-2, 02:58:33 PST
Flight azimuth of 196 deg
6/3 GEM solid motor firing sequence
Dogleg performed between 90 and 131 seconds to achieve ARGOS inclination
Payload fairing jettisoned when free molecular heating rate < 0.1 Btu/ft²-sec
At SECO 1, vehicle in 96 x 460-nmi orbit inclined at 98.84 deg

Flight Mode Description - 2

Following SECO 1, vehicle is rolled 180 deg (12 min 30 sec to 20 min 50 sec)
This is followed by a pitch/yaw programmed rate maneuver
- Rate is equal to 0.15 deg in both axes (21 min to 30 min 40 sec)
This is followed by a coast phase guidance maneuver (pitch/yaw/roll) that orients the vehicle for restart and satisfies the battery shading requirement
Restart occurs (51 min 22 sec to 51 min 42 sec) over Hartebeesthoek and places the ARGOS spacecraft into the desired orbit

ARGOS spacecraft separation occurs at 58 min 20 sec
Second-stage evasive and depletion burns follow to safe the vehicle and
place the Ørsted and SUNSAT secondary payloads into their desired orbits

237. HP200lx & packet radio

Newsgroup: rec.radio.amateur.space
Date: 1999-01-27 00:00:00 UTC
From: Ken Harris <kjh@lacasabonita.com>
Message-ID: <36AFD4BF.14C5D3DA@lacasabonita.com>

Cross-posted to: alt.comp.sys.palmtops.hp,rec.radio.amateur.space,rec.radio.amateur.digital.misc

I have an HP200LX and a Tigertronics ("Baycom") packet
radio modem.

I'm wonder how people use this:

1. What software do you use. It ships w/ L2/SCC, and I'm
wondering how you think that compares to PMP & Flexnet for use
w/ the HP200lx. In particular, I'm interested in software that
will talk with a "mailbox" automagically.

2. I'm kinda new to DOS (I know UNIX & Win95)... and I'm
concerned about the interaction of the "system manager" (SMC) and TSR
softare (like "l2.exe"). Right now I exit out of SMC completely
to run "l2".

3. I made a custom "autoexec.bat" so that SMC wouldn't run,
but then the batteries ran down quickly. I think the trick here
is to run "serctl/o". Is that right? ... and I have to turn on
the serial port before running "l2", eh?

I got stars on Saturday night, and on Sunday part of the spacecraft was
visible.

My technique is to use a prog called recall to turn my
computer/csoundcard into a vox recorder. Then dump the decent sounding
passes to mini-disk to play with that at my leisure.

For the guy who was asking the question. Mir transmits sstv at weekends
on 145.985MHz.

If Hiram was still around, he would shove a morse code key up David Sumners ass and save ham radio. (of course David would have to pull his head out first)

I reread the ARRL FCC comments and can say without a doubt that the ARRL must feel that there aren't enough rules violations on the ham bands.

They want to steal from the extra's and give to the no-goods, OOP'S, I meant no-codes.

The ARRL board makes me want to vomit.

>
> The ARRL board makes me want to vomit.
>

Yo, Save CW,

That's quite the editorial. Too bad you don't give your real name,
whassa matta, you no like to mix it up with the big boys cause
you're too cowardly to post your name? You have zero credibility
when you hide behind your keyboard and use idiotic emotional
diatribe instead of a logical argument.

Just how is it that CW will save ham radio? By making people
pass morse code tests so they can get on 3.950 and 14.313?
Those clowns all passed code tests, just how the !@#$%^&
will it prevent more clowns?

While you're at it, answer me this: If the Coast Guard, FCC
and Congress saw fit to do away with morse code on the high
seas because they are convinced it is no longer required for
SOLAS (safety of life at sea) then why the !@#$% should it
be required to pick up a microphone and talk on HF?

The answer is simple and it has nothing to do with CW. It's
called lack of self-discipline. The troublemakers on the bands
are troublemakers because their mothers didn't kick their teeth
in when they got sassy. They became playground bullies and
graduated into neighborhood bullies and then got ham radio
licenses, then ultimately hide behind keyboards and use phoney
names. These are the same idiots who cause QRM on the ham
bands and bootleg on illegal frequencies, no self-discipline and
no respect for the law. Simple, yes? Wanna save ham radio?
Stop being a coward and lobby for tougher technical exams and
quit whipping that dead CW horse. It's dead, bury it already.

You Got that right!

The hams that studied hardest for their tickets are the hams that the ARRL has decided to take a shit on.

The no-code tech license is the only one that should be nixed.

Like it takes any talent to work DX on 20. This is a satellite newsgroup,
your comments are hardly appropriate. BTW how do I determine the needed
Doppler shift to work a bird programmatically?

I am beginning to think these little outbursts are from a commercial
lobbing group trying to fragment ham radio so they might acquire the
frequencies.

I disagree. Ive been licensed for many years and I can tell you that if Hiram Maxim where still alive, he'd want the hobby to continue to expand in many diverse directions. It sounds like you have "my fathers syndrome". He was a man that made a person do something because "thats the way he had to do it". Times change and people change. Its time for a big change regarding licensing practices.

What happens when digital transmit transceivers come out in a few years? Are all those Extra class license holders (including myself) going to be tested to see if they know all the ASCII characters in binary code????? If that we ever required you'd see all the higher class license holders picketing the FCC in protest by torchlight.....Its time for a new generation with new and different ideas to enter into our hobby.....It was time 10 years ago but the ARRL was still controlled by too many "old timers" then.

My son and I didn't have any luck with an eggbeater.

We are currently using the Arrow handheld dual yagis and it is working
great.
It is fairly low cost and works great with an HT.

It is very light and easily handheld. The duplexer is limited to about 10
watts.

Latest News

The launch of the Delta/Argos/Sunsat/Orsted mission was scrubbed at approximately 02:44:45 following an automated post-ignition shutdown of the main engine. Preliminary indications are the chamber pressure in at least one of the Delta vehicle vernier engines failed to come up to pressure. Solid rocket motors were automatically prohibited from igniting.
An early estimate of one week was given before the vehicle would be ready to support the next launch attempt. A twist to the situation is the Stardust mission preparing for launch from the Eastern Range on February 6.

As you know, Dick, I tend to use the same logic someone else uses to
make a statement about their posting. Extra Class claimed to be about
to lose privileges which he isn't while I, indeed, did once lose
privileges to extras like him. Not only is he not going to lose any
privileges, he actually profitted from me losing some of mine.

I do believe this is a reference to the proposal for grandfathering
advanced's to extras. Obviously, sharing spectrum with ex-advanced's
is taking it away from extras. Why can't you see that?

To all,

You might enjoy seeing Hiram Percy Maxim's 1915 Ham Station. I
receintly discovered a rare 1915 ham radio magazine (pre-dates QST?).
The article was written by HPM and includes 2 photos. State-of-the-art
for back then.

http://www.ggw.org/awa/page_2 --then click on the article.

I have for sale a YAESU FT 736.
vhf / uhf all-mode base station.
stock bands are 2meters+ 70cm. also has 6 meters and 1.25 meters.
plus the FVS-1/1a Voice Synthesizer and the FTS-8 CTCSS Module.

on a scale from 1 to 10 this rig is a 8.
it has very light scratches on it, a a tiny tiny ding in the tuning knob.
i bought it this way. the radio has been to yaesu for a Dust and clean.
and the IF circuit replaced. i bought it broken and had it fixed.
it is 100% working condition and is looking for a good home.

First $1500 gets it shipped free. no trades i need the cash.

please reply to churchrr@home.com

279. Re: Egg Beater Ant

Newsgroup: rec.radio.amateur.space
Date: 1999-01-29 00:00:00 UTC
From: Bernie Poskus and Cheryl Blehm-Poskus <hamdan@ix.netcom.com>
Message-ID: <36B144B1.2A7CE8BF@ix.netcom.com>
Source record: 13879

Dear Bill:

I have been operating with M Squared Eggbeaters on both 70 cm and 2 meters for a number of years now. They work well for most of the LEO's (as long as you don't want to use 9600 baud in a crowded area like North America). I regularly use AO-16, FO-20, FO-29, and the RS birds when they are operational. However, I cannot do very much with AO-27 with my eggbeaters. I used to wonder why but Chuck, KI0AG (who has written a number of articles on AO-27 operation), told me it was because AO-27 is vertically polarized on 70 cm for a good portion of the pass. He showed me how to work it with an HT and an Arrow handheld dual band yagi (you can get one for $132 from Arrow Antennas - let me know if you want to contact them). At any rate, I got an Arrow Antenna and a dual-band HT (an Alinco) and made a contact on my first pass. It was a hoot and I intend to use the setup from some rare grid squares when I go camping in the Colorado mountains this summer.
Hope this helps you out. 73 de Bernie, KF0QS

I'm an extra class ham and getting the extra class license wasn't difficult,
it did take some extra effort though. Now I enjoy using spectrum only extra's
can use and there is generally an open spot to have a QSO. I don't normally
make QSO's in the general or advanced portions because its harder to find a
spot without causing QRM. I want everyone to enjoy ham radio as much as I do
so that is I why I don't QRM.
Now the ARRL whats to take my spectrum away from me, which makes me sad.
It appears the ARRL wants to drive out the good hams to make room for scum.
And there's nothing I can do about it.

It's not "your" spectrum and nobody is going to take it away from you.
Seems worst case is that you will have to share it with the advanced
class. With a conditional license, I once possessed *ALL* privileges.
Then the FCC took it away from me and gave it to you.

Hmmmmmm..... I must have missed something. Which spectrum does the
ARRL want to take away?

Hi all,

I have knocked up some screen savers for you all !

There is one made up of MIR SSTV pictures with some accompniying music and one made of higher quality ISS images, also I have cobbled together a basic guide to weather satellite reception.

The web site is in "basic" mode at the moment due to some recent provider problems.

please send comments to me if you wish, but please be gentle :-)

the site is at

It is narrow-minded individuals that are keeping ham radio in the dark
ages. I know too many "extra's" who cannot even figure out what length
an antenna should be. The only thing about "extra's" that impresses me
is their snobbery.

I am a bit curious, Tom; do you mean the ARRL Board of Director, ARRL HQ staff or the 165,000 members?

I follow most ARRL actions and published material, but don't recall any hint of ARRL having a policy, official or otherwise, about the process that will determine Mr Clinton's fate. Did I miss something? :-)

> 73 de KA7W which is dadidah dadah dadadididit didadah on CW

Um... is your callsign KA7W or KM7W? I am not real good at visual CW, but your CW and ASCII don't agree... :-)

To all,

A Tube Collectors Club has been formed by some of the b-i-g
Collectors and Historians. "It's very well done. John Dilks, K2TQN"

For more information and an application go to:

http://www.eht.com/oldradio/tubecollectors/index.html

FYI: A group of collector-historians has recently formed the "Tube
Collectors Association." This is in response to the need for a focused
group dedicated to the growing activity of collecting radio/wireless
tubes and to sharing historical insight about them. As a tube
enthusiast, you'll probably be interested in this development, and may
want to help guide the activities of the group from the start.

Nice use of a lookup table, Pal.
Actually he's like me--CW is to be copied and sent by
listening to it, and the use of a key/er, not reading it
from, or writing to a sheet of paper. I always have a
problem with that, too. Most CW fans would.

A Written test on CW "folded" into the regular written test?
A joke.

Then why do you still sound so confused? Unless he's one of
a very few oldtimers who held Extra class licenses at the
outset of Incentive licensing in 1968, he was-if he was a
ham at all then- a General or an Advanced, and was "forced"
to pass additional theory and code tests to reclaim the
spectrum privileges he lost, just like you and me. He and I
did just that- and so hold the license which conveys the
privileges.

What will we "lose"? I guess it's beyond your imagination,
but there are several things at risk. Freedom from some
weak-signal congestion, for an important one. I for one
don't relish the lower half of the HF bands filling up with
no-code, no-test, no knowledge 'communicators' who know
nothing, or next to it, of the poteential consequences of
their placing a 1.5 KW signal on the air. Few of them will
have a clue how to do it right, and a great many won't even
know enough to care.

One thing you could have done is send your comments to the FCC. Hope you did
because you can't anymore.

Maybe you could start a campaign and vote the current board out of office.
That should send a clear signal of your displeasure.

I'm going to protest by not renewing my ARRL membership.

I've recently obtained the above TNC for satellite use - It was on sale at a price too good to miss !!

Does anybody use one of these machines out there ? If so, is there any recent software for it, and is there an address I could contact for more info ? (I've been to the makers web site, Tasco, but its all in Japanese - Is there an english site ?)

Any info on this TNC would be gratefully received.

Cheers all,

Ian G4ZJH.

The vast majority of them, in my experience, are good people. But why, when someone is being a jerk on ham radio or at a club meeting, does it always have to be an Extra? Couldn't the rest of us take a turn so the Extra's don't get a reputation?

Just out of curiosity, why not renew your membership and set a goal of
voting out the current board ??

As many people over the course of a year may not renew, why would they
take notice of one non-renewal. A renewal and a whole lot of noise might
be as good as an wap to the chops with a 2x4, rather than slinking away
noiselessly

Just a muse

--
The Amateur Radio Service is not meant
to be the playground of the technical elite.

Keep the likes of THEM from turning it into
THEIR own private little test lab!!!

Cecil, I can't see that either. That isn't taking one
kilohertz of frequency from any extra. The fact is that
all it means is a change in the exclusivity of some spectrum.
That is not a loss in spectrum to any Extra at all.

Cheers,
Bill K2UNK

Hi all,

I have just done a quick weather satellite screen saver for you all.

It has pictures from the worlds Geostationary birds and some are very nice indeed and all full screen along with "earth song" playing with it

help yourself

There are other options, such as not renewing but still making a lot of noise.

```
SB NEWS @ AMSAT $SPC0201
* SpaceNews 01-Feb-99 *

BID: $SPC0201

=========
SpaceNews
=========

MONDAY FEBRUARY 1, 1999

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* SUNSAT LAUNCH DELAYS CONTINUE *
================================
The latest launch attempt of SUNSAT that occurred late last week ended
with a "hang fire" event. The countdown progressed very well without
a hold, but the launch vehicle failed to ignite at the "zero" mark.
People were immediately told to leave the area as the Delta rocket was
in a very precarious position and was capable of firing at any minute.

It may be some time before the fault is located and corrected, and
another launch is attempted.

[Info via Cliff Buttschardt, K7RR]

* AMSAT-OSCAR-10 NEWS *
======================
On the evening of 1999-Jan-28, Ib Christoffersen, OZ1MY, observed some
frequency modulation of AMSAT-OSCAR-10's downlink signal. This instability
may be an indication that the satellite is entering a period of insufficient
sunlight to maintain proper transponder operation. Such periods are seasonal
in nature.

* KIISAT-OSCAR-23 NEWS *
=======================
KITSAT-OSCAR-23 ground command station KyungHee Kim, HL0ENJ, reports
that KO-23's TX0 transmitter has been tripping off frequently since
1998-Aug-18. During a recent incident on 1999-Jan-17, the satellite
was reset by controllers only to be found to be silent on the next
pass over the command station. Controllers observed that one of the
satellite's battery voltages is very unstable, and almost all the
satellite's subsystems were shut down due to a lack of power since
the Jan-17 outtage. The satellite is expected to be off the air
until the recent problems with KO-23 can be further analyzed.
```

* MIR/APRS SCHOOL CLUB ROUNDUP *
==========
The annual ARRL School Club Roundup (SCR) event runs from 1999-Feb 8 to 13 and has the objective to get as many schools on the air as possible (all bands all modes). Coincidentally, the Space station MIR's orbit during that week is over the USA during school hours and so makes an ideal opportunity for the students to participate in satellite communications as well.

As part of the ongoing APRS/MIR/School experiments, MIREX Dr. Larsen has endorsed the maximum participation of all schools to use the MIR digipeater to exchange communications between schools during this week long event (do not connect to MIR). APRS style (UI) operations can handle as many as 100 stations per pass, so any school with a 2 meter FM radio, omni whip antenna and a TNC should be successful on 145.985 MHz. The APRS/MIR portion of this event is NOT A CONTEST, but an opportunity for students and schools to learn about space communications.

Everyone is encouraged to contact a local school science teacher and schedule a time period during that week when you can help set up and/or operate a school club station. Even if you cannot transmit for some reason, the LIVE MIR downlink is always visible on the Naval Academy's MIREX web page:

http://web.usna.navy.mil/~bruninga/mirex.html

This page shows the results of last years APRS/MIR School testing and will be updated with specific details about the SCR event (if any).

The ARRL School Club Roundup contest is described on page 92 of QST January, 1999 or see http://www.arrl.org/contests.

[Info via Bob Bruninga, WB4APR]

* FO-29 SCHEDULE *
==========
The JARL has released a new operatiing schedule for FUJI-OSCAR-29 that is expected to remain in effect until 1999-Feb-22:

25-Jan (Mon) -to- 01-Feb (Mon) : Mode JA
03-Feb (Mon) -to- 03-Feb (Wed) : Mode JD (1200 baud)
03-Feb (Wed) -to- 08-Feb (Mon) : Mode JA
08-Feb (Mon) -to- 15-Feb (Mon) : Mode JD (1200 baud)
15-Feb (Mon) -to- 18-Feb (Thu) : Mode JA
19-Feb (Fri) -to- 22-Feb (Mon) : Digitalker

The next schedule is expected to be announced by the JARL on 1999-Feb-10.

Steve, you don't make noise to the organization's staff that are already
ignoring you. You do it to their paying patrons and you do it to the
government entity that controls your interests.

Brian/N0iMD

Very interesting...

Hey "Save CW"... how about shutting the fuck up before you bring anymore shame on your family. Do you realize that you have created some terrible irony here?

The whole purpose for "Saving CW" is that it is a low bandwidth mode that requires minimal equipment. This is an essential in emergency communications, one of the cornerstones of amateur radio itself. Well, I took a peek at your message headers... it seems that not only did you create this message in some fancy assed Windows based newsreader, but you cross-posted to 5 different newsgroups. Talk about wasting bandwidth and not understanding the fundamentals... You know, if the founders of the ARPANET were alive today, they would shove a VT100 terminal up *your* ass (and look out, coz they ARE still breathing...) So tell us again, what _exactly_ is your philosophy on CW? Is there really one, or has the swelling in your nuts just not gone down since you actually passed the code portion of the exam?

You come back when you're running PINE on a greenscreen and we'll talk about why the stone ages should live forever; until that moment, keep your narrow-minded
"I-am-the-idiot-that-keeps-ham-radio-synonymous-with-social-retard" comments out of my bitstream.

Cliff Beckwith
KE4UPZ

PS - I removed some of the groups you were posting to... totally irrelevant to post this thread to rec.radio.amateur.antenna or rec.radio.amateur.swap; they really don't want to see this stuff....

Source record: 13788

Friends,

I am running a Web-site on space history and especially radio tracking of early space objects. (http://www.users.wineasy.se/svengrahn). I am now preparing an article for the Web site on the flight of the first Soyuz spacecraft on 23-24 April 1967. I am trying to run down any reception reports about voice or telemetry from this craft that carried vladimir Komarov to hs death. The craft had transmitters on 15.008, 18.035 and 20.008 MHz. I sat up all through the morning hours of 24 April 1967 listening for signals on 20.008 Mhz but never heard a thing.

Any reception report would be greatly appreciated. I would also like to get in touch with people who heard shortwave voice from the early Vostok and Voskhod craft.

Sven Grahn

325. WARNING !, virus alert on e-mails called "happy99.exe"

If you have Norton Antivirus, download the 21 January update. This
detects HAPPY99.

Thats not a very charitable thing to say of someone who has suffered
what the happy99 virus actually does.

Unless it havs became active RS-10 has not been heard in a while.
Are you hearing any other sats ? I think IT has the moon and sun data in it .
Are they in the correct positions? YOu may be on ther wrong frequency for
rs-12. Have you checked AMSAT.ORG for the latest operating frequencies (modes)
of rs-12 ?

> A joke.
>
> Dick C

Dear Sir,

I'm new to this newsgroup, and was probably taken out of context. The only reason for my correction was I thought it was funny that the poster talked about the importance of CW and then got some wrong. (I did in fact notice that w/o looking it up - I'm going for my 1A in 2 weeks.) I'm hoping to pass so that I can get on the HF bands, but my original interest in the code was not for that reason. During the summer time I used to try to see how far I could talk on FM 2m. Scanning around the band I would hear a repeater and be able to key it up, but noone would be on and I would hear the repeater ID (usually in CW). Realizing that I had no idea where this repeater was, I decided to learn the code. Since then I have been at college and find little time to go on the air, but am trying to increase my on-the-air time,operating skills, and learn CW to get the Tech Plus license.

Though I am a "No-Code Tech" and very proud of it, I am also a supporter of the continuation of a 5wpm code test for the HF bands. I haven't made a decision as to the worth of higher speed tests, but I do think it is important that a ham atleast have a knowledge of the code.

As an example as to how important the code can be, and what a "No-Code Tech" with a little knowledge of it can accomplish, I'd like to share with you what I heard today.

dahdidit dit didahdit dadadadadah dadah didit didahdit (145.985 MHz)

Now, a ham with no knowledge of the code whatsoever scanning around the 2m band could have passed this up without a second thought - having no idea what s/he missed. I was thrilled to hear this and even recorded it on the next pass.

Well, it's getting late and I have class early tomorrow. Good night gentleman.

Gerry,

I have had the KCT running under Windows/98 (not with WiSP). Have you tried the satdemo program that comes with the KCT windows driver?

Has this problem only occurred when you loaded Windows/98? You may want to check that the I/O port address used by the KCT is not conflicting with some other device.

339. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-02-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <794g2l$ddk@news.Hawaii.Edu>
Source record: 13803
Cross-posted to: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

I don't understand your comment. I view Pine on a Wyse 30, but Pine is
relatively new. Before Pine was MM and Mail, but even those mailers were
in use in the early 90s. (Yes, there is a VT-52 terminal still in the
office).

Source record: 13812
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

You have just confirmed one of my biggest arguments about Morse Code. The problems with Ham Radio has nothing to do with Morse Code, and you where not sending or receiving CW. You where send and receiving modulated carrier Morse Code (FM) which would gain you little ground for DX (I know, except when used with SSB which might as well be (IS) CW).

Drop the Code, increases the testing across the board, mandatory for all including existing license holders.

1) no-coders will not want to populate CW frequencies.
2) There are only two US agencies backing narrow band transmissions
a) FCC
b) ARRL
Most commercial entities abandoned this aged technology.

As for me, I am still learning it because I want to. I like QRP and homebuilt stuff and it is just plain easier and more gratifying to build CW equipment.

Good news! Bill Gates has just passed his extra class test and has agreed to use his spare pocket change to buy a lift for P3D on the next space shuttle flight. Of course, AMSAT has to paint "Microsoft" on the front of the bird.

I couldn't resist,
Tom

Yes, PINE is relatively new, but it doesn't eat nearly the system resources that IE4 does. *THAT* was my point. If the age of the tool were in question, I think some of these CW folks might also be harassing others about how old their keys were.

367. Dumb question - packet sats

Newsgroup: rec.radio.amateur.space
Date: 1999-02-03 00:00:00 UTC
From: NOSPAMnocoast@aol.com
Message-ID: <36b87c72.6899894@netnews.worldnet.att.net>
Source record: 13831

Here's a pretty naive question - please bear with me...

Most of the packet sats run 9.6k packet, right?
Most of the packet sats have a 2M uplink, right?

Isn't it darn near impossible to put a 9.6k data
link through 6 KHz of narrow band FM?

I am really curious about this.

Thanks,
Andrew KA2KHD
Tampa, FL

Please post response

368. First Taste of AO-27!

Newsgroup: rec.radio.amateur.space

From: NOSPAMnocoast@aol.com
Message-ID: <36b87e9b.7453583@netnews.worldnet.att.net>
Source record: 13832

I had my first taste of AO-27 this AM as it passed over the Gulf of Mexico. I just built a 5 element Quad for 436 MHz and was anxious to try it out. Using pass coordinates from WinOrbit freeware I stood in a lot across from my house. I turned off squelch on my Kenwood ICW32-A dual bander. It was a few minutes after AOS that I got the satellite. At times the audio was very clear, other times pretty scratchy. The QSO's were very quick with lots of calls coming through, like an FM pile up!

I didn't make any calls as I did not have the 2M antenna hooked up.

Pretty damn cool!

- Andrew, KA2KHD

Well, it would be if NBFM were really 6 kHz. It
isn't, of course. The bandwidth of NBFM can
be approximated as 2*M + D, where M is the
highest modulating frequency and D is the
deviation. So if the highest modulation frequency
is 3 kHz, typical for communications quality voice,
and the deviation is 5 kHz, standard in amateur
radio, then the bandwidth is 11 kHz. Most amateur
receivers use a 15 kHz filter for NBFM.

Now for the 9.6 kb modulation we use for amateur
satellites, the value of M is 4.8 kHz, and the deviation
we use is 3 kHz to 5 kHz, yielding a bandwidth of
12.6 kHz to 14.6 kHz, which fits in the 15 kHz filter
in our receivers. To avoid phase distortion at the
filter passband edges, we normally set the deviation
toward the low side, giving us a bandwidth of about
13 kHz for 9.6 kb transmissions.

We aren't really using our equipment as FM equipment
here. We're operating MSK (Minimum Shift Keying).
The radios don't know the difference, but the modems
do.

Here's THE solution to all the whining and bickering about no-code vs code, appliance operaters vs the techs, etc. If you don't like the nocode, nontech folks then why not build your own gear and start populating the portions of the spectrum that the appliance operators won't easily be able to use?? That way the over the counter hams (aka OTCH) can go to their favorite store and buy stuff off the shelf and plug it all in. They can operate in the bands that they can afford to buy equipment for, the tech/coders can use the portions of the spectrum that aren't currently being used yet are available for amateur use. What, CW on microwaves?? Why not! Even the military does it this way. Operators don't fix/build equipment and the repair folks don't operate gear in the field. This division has been happening for eons and has worked just fine. Now everyone is happy for many reasons:

1. The nocode/nontech folks can get on learning more about operating amateur radio and not get hassled from the code/tech ops.

2. The code/tech folks can get what they want, plus not be hassled by listening to the nocode/nontech folks.

3. We (hams) start using more of the spectrum assigned, and start to lessen the threat to our bands.

4. More experimentation happens, things get designed/implemented/built, people learn.

The problem is that microwave frequencies are more amenable to high-bandwidth communication technologies -- CW would be less necessary there. Microwave signals are also severely range-limited. The best use of CW is on the HF bands as a weak-signal DX medium. So, a better suggestion would be to let no-coders use the high bands and restrict access to the long range HF frequencies....oh gee, I forgot...we're doing that already...

I like it Mark. It is kind of funny that lack of 220 equipment is what sparked my want/need/desire to build equipment. I still do not think knowledge of Morse Code is all that paramount, but as I eluded to before, equipment for CW sure is a heck of allot easier to build.

I know this guy whose neighbor, a young man, was home recovering from having been served a rat in his bucket of Kentucky Fried Chicken. So anyway, one day he went to sleep and when he awoke he was in his bathtub and it was full of ice and he was sore all over. When he got out of the tub he realized that HIS KIDNEY HAD BEEN STOLEN and he saw a note on his mirror that said "Call 911!" But he was afraid to use his phone because it was connected to his computer, and there was a virus on his computer that would destroy his hard drive if he opened an e-mail entitled "Join the crew!" He knew it wasn't a hoax because he himself was a computer programmer who was working on software to save us from Armageddon when the year 2000 rolls around. His program will prevent a global disaster in which all the computers get together and distribute the $600 Neiman Marcus cookie recipe under the leadership of Bill Gates. (It's true-I read it all last week in a mass e-mail from BILL GATES HIMSELF, who was also promising me a free Disneyworld vacation and $5,000 if I would forward the e-mail to everyone I know.) The poor man then tried to call 911 from a pay phone to report his missing kidneys, but reaching into the coin-return slot he got jabbed with an HIV-infected needle around which was wrapped a note that said, "Welcome to the world of AIDS." Luckily he was only a few blocks from the hospital... the one, actually, where that little boy who is dying of cancer is. The kid whose last wish is for everyone in the world to send him an e-mail and the American Cancer Society has agreed to pay him a nickel for every e-mail he receives. I sent him two e-mails and one of them was a bunch of x's and o's in the shape of an angel (if you get it and forward it to twenty people you will have good luck but ten people you will only have ok luck and if you send it to less than ten people you will have BAD LUCK FOR SEVEN YEARS).

So anyway, the poor guy tried to drive himself to the hospital, but on the way he noticed another car driving along without his lights on. To be helpful, he flashed his lights at him and was promptly shot as part of a gang initiation.

And it's also a little-known fact that the Y1K problem caused the Dark Ages.

To the best of my knowledge it is not that serious, it is more of a worm
than a virus and overwrites the winsock file but does not actually harm any
of your programmes, it is easily destroyed and if i remember Norton also has
a clean routine for it now.

What I meant by serious was that it is real. It is enough of a problem that it will cause you to have to wipe and re-install unless you can hack the registry, remove the network subsystem and re-install it. I don't think it is much of a threat to WindowsNT, more of an inconvenience.

398. ARISS meetings in Houston

Newsgroup: rec.radio.amateur.space
Date: 1999-02-06 00:00:00 UTC
From: Will Marchant <kc6rol@amsat.org>
Message-ID: <36BD00DD.B413816A@amsat.org>
Source record: 13712

From a posting by Frank Bauer, KA3HDO@amsat.org, to the SAREX listserv:

ISS Amateur Radio Accommodations meeting held at the NASA Johnson Space Center in Houston

A series of extremely successful International Space Station (ISS) Amateur Radio accommodation meetings were held at the NASA Johnson Space Center in Houston from January 22-27. These pivotal meetings were sponsored by NASA and by Energia, the Russian space company that is building portions of ISS. The primary objectives of these meetings were to finalize the design development of the "Initial Station" amateur radio hardware for ISS and to develop a more effective understanding and advocacy of the Amateur Radio on the International Space Station (ARISS) program within NASA and Energia.

In addition to representatives from NASA and Energia, the ARISS "Initial Station" hardware development teams from the US, Russia, Germany and Italy were invited to participate in the meetings. The Initial Station design, solidified during the July 1998 ARISS meeting in Surrey, England, consists of 2 meter and 70 cm handheld radios, a packet radio system and power supplies, provided by the US team, a Digitalker, provided by the German team, antenna feedthroughs and power and space accommodations provided by the Russian team and the development of an antenna system which is led by the Italian delegation. NASA will be providing a Space Shuttle launch to transport the Initial Station hardware to the ISS and has financially supported the flight qualification of the Initial Station Hardware. Some of the testing required by NASA and Energia to flight qualify this hardware includes the development of a safety analysis package, hardware performance testing, ISS interface testing, electromagnetic interference testing, and toxic chemical offgassing testing. Both NASA and Energia are intimately

involved in the external outfitting of the planned antennas systems through
special astronaut spacewalks or EVAs.

The following ARISS team members from various IARU and AMSAT organizations
were invited to attend and participate in these meetings:

Sergej Samburov, RV3DR, Representing Energia, AMSAT-Russia and ARISS-Russia
Ron Parise, WA4SIR, Representing the ARISS-US Hardware Delegation
Lou McFadin, W5DID, Representing the ARISS-US Hardware Delegation
Frank Bauer, KA3HDO, Representing NASA, AMSAT-NA, and ARISS-US
Matt Bordelon, KC5BTL, Representing NASA and ARISS-US
Thomas Kieselbach, DL2MDE, Representing the ARISS-German Hardware Delegation
Alberto Zagni, I2KBD, Representing the ARISS-Italian Hardware Delegation

Fabrizio Bernardini, I0QIT, Representing the ARISS-Italian Hardware Delegation
Luca Bertagnolio, IK2OVV, Representing the ARISS-Italian Hardware Delegation

During the meeting, Sergej Samburov, RV3DR, the President of AMSAT-Russia
in Moscow and the Chief of the Cosmonaut Amateur Radio Department at
Energia, confirmed that 4 dual-use antenna feedthroughs have been installed
on the Russian Service Module. These dual-use feedthroughs are expected to
support amateur radio operations and ISS proximity video capability during
Russian and US spacewalks. He also confirmed his strong desire to work

with the ARISS international partners to develop a single, coordinated
amateur radio station on ISS.

Key NASA officials stated that they, too, need a single, international
focal point to coordinate amateur radio development and operations on ISS
if amateur radio on ISS is to have a future. During the meeting, these
NASA officials were extremely pleased with the high level of flight
hardware expertise and on-orbit operations knowledge that the ARISS
international partners are providing to NASA and Energia. The ARISS
international team was formed over two years ago to provide this single
focal point to the space officials at NASA (US), Energia (Russia), NASDA

(Japan) and ESA (Europe). Frank Bauer, KA3HDO, AMSAT-NA's Vice President
for Human Spaceflight Programs, commented, "I was extremely impressed with
the tremendous teamwork, camaraderie and cooperation that the ARISS
International Partners exhibited during these pivotal meetings with NASA

and Energia. Together we share a common vision to develop and operate a

multifaceted amateur radio station on ISS that will be a great
recreational
outlet for the on-orbit crews, an exciting DXpedition station for hams
on
the ground and an outstanding educational outreach tool for students."

In the near future, additional information from these meetings will be
provided including discussions on:

ARISS Initial Configuration & Delivery Schedule to ISS
Antenna System Design
Antenna Locations on Service Module and initial plans for ARISS EVAs
Meetings with NASA Senior Managers
Digitalker design
ARISS Frequencies
Future installation of an SSTV system
Express Pallet opportunities

The ARISS hardware team discussed and reaffirmed their long planned
commitment to solicit proposals from the amateur radio community to
develop
follow-on amateur radio hardware for ISS. Proposals chosen to proceed
forward would then be coordinated through a NASA/Energia employee-based
radio working group that would negotiate power, volume and operations
scenarios for the proposed equipment. The ARISS international team is
composed of representatives from the IARU and AMSAT societies in Russia,

Italy, Germany, England, France, Canada, Japan and the US. The Space
Amateur Radio EXperiment (SAREX) Working Group provides the US hardware
and
administrative representation to the ARISS international team. Within
the
US, they coordinate the US hardware development, operations and
educational
outreach activities for the ARRL, AMSAT-NA and NASA.

Dear Sirs,

I hold a Technician license, and fueled by the beacons I've heard from Mir, am interested in satellite work. I have downloaded and configured WinOrbit, and use a Yeasu FT-5200 (dualband mobile). Unfortunately though, I am living in the dorm at DSU, so can't run high power. Are there any FM (voice) satelites I could possibly work ? Any info would be appreciated.

Geert, I believe that you need to connect the horizontal and vertical feedpoints of your crossed yagis with a 90 degree phase shifter. This would be a quarter wavelength (including velocity factor) of coaxial cable. You would then connect your feedline to one of the feedpoints. I am not sure which one (horizontal or vertical) would go to the feedline for right-hand circular polarization. You need to check a good book or a more experienced VHF/UHF ham. If you connect the feedline to the "wrong" antenna, you get left hand circular polarization instead of right-hand! This all assumes that the horizontal and vertical elements are coplanar, or very close together. If they are not you would have to compensate with the phase shifter. Hope this helps!

>Most of the packet sats run 9.6k packet, right?

The most popular digital sats now orbiting (Uo-22, Ko-23, KO-25, and TO-31) run at 9k6, yes.

>Most of the packet sats have a 2M uplink, right?

right again.

>Isn't it darn near impossible to put a 9.6k data
>link through 6 KHz of narrow band FM?

Not impossible, but you can't simply tie into the microphone and speaker connections for the data stream. The transmit audio is fed from the TNC modem directly into the modulation stage (varactor) of the 2M transmitter. The receive signal is tapped off directly from the discriminator of the 70cm receiver. Some radios come with these connections available, others can be modified. Making these connections allows the undistorted bandwidth necessary.It all still fits within +/- 3Khz deviation, however. I have found that the sats are quite happy with 2.5-3.5 Khz deviation on their receivers.

RELEASE NUMBER 99-0204
DELTA DELAY
VANDENBERG AIR FORCE BASE, CA - The launch of a Boeing Delta II rocket scheduled for today at 2:39 a.m. has been postponed due to precipitation and upper level wind constraints. The launch will be rescheduled for a later date.
The rocket was slated to lift off from Space Launch Complex-2 on north Vandenberg to place ARGOS, SUNSAT and Orsted into orbit.
The Delta II launch from Vandenberg is a team effort between the 30th Space Wing, the Space and Missile Systems Center at Los Angeles AFB, CA, Boeing, NASA and the countries of Denmark and South Africa.

MIREX has arranged for the space station's packet digipeater to be on all week in support of the MIR/MIREX/APRS tests that are being conducted in conjunction with the ARRL's School Club Roundup. Hopefully you won't see any SSTV at all this week until after Saturday when the tests conclude.

Yes it is possible.the low earth orbit sat have a few on fm. Check amsat.org
A tracking program is needed to know when. There is a 22 minute or less window
when it is above the horizion.
the two major band are 2 meters and 70 cm. the 2 meter area is from 145.800 to
146.000
the 70 cm part is about 435.000 to 438.000. most are on single side band , and
your scanner most likely is fm only.
try Ao-27 for one. Problem it is only on during the day time., when the sat is
in sun light.so the batteries can be charged.

Hello.

I wonder if it is a good idea with the 15m uplink on RS12/13.
On the day time passes over Europe, the satellit is allmost blocked
with 15m stations, who call cq 15m.
On most of the day time passes, we can't work the satellite at all,
becourse 15m stations is using all the space for there NON satellite DX
talk. This realy makes me unhappy, if i have to say it nicely.

This problem can't only be in Europe, becourse we hear alot of 15m
stations from Asia,US and Africa.

If you can, please inform your 15m stations in the area about this problem,
or write a letter to your country "HAM paper", QST or what
your country HAM paper is called.

YES! (with some limitations)
If you would like more information please visit the HearSat website at:
www.geocities.com/CapeCanaveral/Launchpad/1530
There is also a mailing list (HearSat-L) which you can join (details on the website). I have used Radio Shack scanners to receive many satellites. I have received some fabulous SSTV pictures from Mir, have listened to Mir and Shuttle crews talking and lots more.

The limitation is that scanners are designed primarily for terrestrial monitoring. Many low-end scanners do not support SSB/CW which is essential for some of the hamsats. Leave your scanner tuned to 137.500 MHz in the early morning and you are sure to receive NOAA 15 (sounds like a distinctive "ping-ping"). Good luck!

I find it most interesting that the trolls and zeros who worshiped
at the door in Newington have found the Devil in residence since the
official party line on code hazing changed. It is even more interesting
that these trolls seem to think without the mandatory hazing that
CW will die. I think CW will do just fine, in fact if these
superscilious jackasses of the PCA fall off their high horses guys
like me who have had enough of the crap might come back.
Just a thought.

433. So that's where my spectrum went.

Well yes and no....

Yes you can receive them fine (I use a very cheap direct entry scanner)
but if you want to do any serious remote imaging etc you'll need to
modify it slightly.

I think what you'll find (depending on which satellite you're trying to
receive) is that the antenna you choose will make the biggest difference

Which satellites are you interested in and Ill give you the frequencies

:)

Have a nice day.

Message-ID: <36C18E32.D16D369F@ix.netcom.com>
Source record: 13747

Darren,
There is a good article, "Make Your Own Multispectral Satellite
Images" by Les Hamilton in RIG (Remote Imaging Group
http://www.rig.org.uk/) Journal #38.
I use a slightly different technique, using Photoshop, with good
results...
Its pretty simple , just seperate the IR and Visible portions of the NOAA
image
into two pictures of the same size. I then equalize the images sing
IMAGE-ADJUST-AUTO LEVELS (you may or may not wish to do this step) Convert
both
images to RGB using IMAGE-MODE-RGB COLOR. Select the visible image then use

SELECT-ALL, use EDIT-COPY then select the IR images BLUE layer. PASTE the
Visible
image onto the blue layer then look at the combined RGB layer. You should
have a
pretty good color picture.

If you're not using Photoshop your program should have similar
functionality.
Crop the images, equalize them (optional), convert them to RGB, capture the

visible image and paste into the blue layer of the IR.

Have fun
Regards,

Rolf

APRS School roundup is going on. Mirex and some schools have an APRS data steam routed from MIR to various schools via the internet.

Those operators without APRS software are placing their Ident packets in the BTEXT string of the TNC and turning the Beacon on every two minutes or so. This way their stations can be seen on the APRS maps when MIR is over head..

Beacon text. The command btext then your message will be sent out evey X
amount of minutes depending on what your B command is set for. The B command
is the time rate your Beacon text is set to be sent out at. B 0 (zero) turns
off the beacon.

You initially tell APRS your Latitude and longitude and tell it what icon
to use when it outputs the data. this info is inputted when you run APRS for
the first time if it's registered, if unregistered you input this data each
time you start the program.

[This followup was posted to rec.radio.amateur.space and a copy was sent
to the cited author.]

rhansil@fcmail.com says...
> Thank you all I am new to packet and aprs so I had to ask as I have no
> elmer it is tough being teacher and student.
> QUESTION How does it know to put a schoolhouse in your grid square, by
> the call?

An examples of 'an APRS compatible BTEXT is:

BTEXT:]K[Sam Rosen Elementary School, Fort Worth TX

and it would look like this when repeated by the R0MIR digipeater:

K5SRE>EM12ht,R0MIR*:<UI>:]K[Sam Rosen Elementary School, Fort Worth TX

which puts an icon of a little red school house on the map in our Grid
Square.

In this case, it's the uppercase K in between the backwards brackets that
tells the APRS software to display an icon of a little red school house.

Some of the other common icons are:

K School (upper case K)
k truck (lower case K)
- house with Vertical Antenna
y house with Yagi (lower case y)
> car
v van (lower case v)
U school bus (upper case U)

That's how we digipeated our location and icon information during
this week's MIR/APRS experiment... and it worked well, at least for
us putting out our location to others.. got email confirmations and
on-the-air confirmations that our location was marked appropriately
with the right icon. Unfortunately, we didn't receive anyone else's
except on Tuesday.. and none of the others were schools. Owell.

Latest News

SUNSAT's launch attempt for Saturday 13 February has been scrubbed due to a power supply problem on the Delta II launch vehicle. Repairs to the power supply could take up to 5 days, which will bring the launch vehicle to 40 days on the pad. The secondary stage can only be fueled for 35 days, after which it must be 'recycled', due to corrosion of the fuel tanks by the propellant.
This means that SUNSAT's launch will be delayed for at least a week. .

457. End may be near for Russia's space station Mir

From: "Conrad - [PA-3171]" <nl7sts@space-man.com>
Message-ID: <7a3t9f$o42$1@reader3.wxs.nl>
Source record: 13671

Three cosmonauts are ready to blast off next week on another odyssey to Russia's aged space station Mir.
Their main task likely will be to bury it.
Senior Russian space officials said Thursday that efforts to find private investors to keep Mir aloft are failing, and the station might be dumped into a watery grave in the Pacific Ocean by late summer.
Spearheaded by RSC Energia - the aerospace company that operates Mir for the government - the bid to save Mir "was just wishful thinking," Russian Space Agency director Yuri Koptev said in Moscow.
"They have indeed carried out serious work with an investor who had the money. But the investor has some problems. If no investor is found, we will be forced to make the tough decision to discard Mir in August or September."
The comments came after what may have been the last hope for Mir, which will celebrate its 13th anniversary in orbit Feb. 20.
Last month, Russian Prime Minister Yevgeny Primakov gave conditional approval to keep the station in orbit through 2002.
In a decree signed Jan. 21, he granted RSC Energia the right to run Mir on a commercial basis after the Russian government stops paying for station operations in June.
But the decree also had several caveats, including an April 30 deadline to find private investors to pay the $250 million a year it takes to keep Mir flying.
RSC Energia officials as recently as Monday had been in negotiations with an unnamed foreign firm, but Koptev said the deal had fallen through.
He also denied Russian media reports that Mir's mysterious benefactor was the Chinese government.
"China has been energetically developing its own space program and promised to put its first astronaut in orbit by Oct. 1 this year," Koptev said. "If they had been interested in flying on our station, they would have done it a long time ago."
Two Chinese pilots trained at the Gagarin Cosmonaut Training Center in Star City outside Moscow, but the cooperation ended there.
"We haven't heard from them since," Koptev said.
With Mir's fate bleak, Russian cosmonaut Viktor Afanasyev and two crewmates - Jean-Pierre Heignere of France and Ivan Bella of Slovakia - are to rocket there Feb. 20 from Baikonur Cosmodrome in Kazakstan.
Bella, the first Slovakian to fly in space, is to return to Earth in early March with Mir's current commander, Gennady Padalka.
Cosmonaut Sergei Avdeyev, the station's current flight engineer, is to remain onboard with Afanasyev and Heignere until August.
Those three could find themselves on Mir's burial detail. Here's how they would do it.
First, a pair of Progress space freighters would be used to gradually lower the station from its current orbit 250 miles above Earth to one about 100

miles above the planet.
Second, a new, advanced Progress freighter that can carry twice the fuel of earlier models would be launched to Mir.
Once the new ship docked at Mir, the crew would shut down most station systems before returning to Earth aboard a Soyuz spacecraft.
Ground controllers then would fire the new Progress's powerful engines, sending Mir on a destructive plunge through the atmosphere.
Most the 130-ton outpost would burn up in the atmosphere. Any remaining pieces would fall harmlessly into a remote area of the Pacific Ocean.
"The plan is in place," said Mikhail Sinelschikov, RSA's chief of piloted space programs.
"The crew would be onboard the station all the way through the docking of the new Progress. The final (deorbit) burn would take place when the Mir station is unmanned."
Mir's death would be a hard blow to the Russians.
Considered the sole remaining jewel of the former Soviet Union's space program, it is a source of deep national pride and a symbol of Russian achievements in space.
A T-shaped cluster of cylindrical labs, the station has been staffed almost continuously since its core module was launched Feb. 20, 1986.
Sixty cosmonauts and astronauts from around the world have conducted research there, including seven Americans that visited the station between 1995 and 1998.
Nine U.S. shuttle flights also were flown to Mir as a precursor to construction of NASA's new International Space Station, the first two pieces of which were launched late last year.
Independent aerospace analysts say the push to keep Mir flying could have jeopardized an intricate series of flights still required to raise the new $50 billion international station.
The reason: Russia would have to triple its production rate and build 32 rockets, cargo ships and crew transport vehicles to keep Mir aloft and build the new station - a feat many consider impossible.
"Even if the Russians are able to find money from private investors, they don't have the manufacturing capability to support both the Mir and the international station," said James Oberg, a Russian space program expert.
"If Mir lives on for even another year, it will just sink NASA's station construction plans."
Russian officials, however, clearly don't want to abandon Mir before the new station's first fulltime crew arrives at the outpost in February 2000.
"You never get rid of an old pair of shoes before you buy a new pair of shoes, especially in the winter time," said veteran cosmonaut Valery Ryumin, who now heads RSC Energia's International Space Station program office.
"So why get rid of an old space station when we don't have a new one."
Throughout the Mir debate, NASA and its other partners in the international station - Europe, Canada, Japan and Brazil - have been saying little about the station's fate.
"Russia is a sovereign nation, and Russia makes decisions about its own assets," said NASA Administrator Daniel Goldin. "We in the United States, and our partners, ask only that Russia live within its commitments to the International Space Station."

But if Mir's days indeed are numbered, one thing is certain. Those who toiled aboard the outpost during its 74,000 spins around Earth soon may be in mourning.
"I spent more than a year on Mir," said veteran cosmonaut Sergei Krikalev. "And of course it would be a kind of a sad feeling to see your old home destroyed."

Saw this post and tried it. I must be doing something wrong. I have Photoshop LE, brought in a NOAA tiff file from my Quorum system, and converted it to RGB but.... I saw no color on any of the image. What am I doing wrong? I, like alot of people, would like to put some color to the images and your idea sounds good if I can get it to work.

Whoops - yep, forgot to include that you set your UNPROTO using
your Grid Square and add the 'via R0MIR' to the path, making it:

UNPROTO: EM12ht via R0MIR

then, the APRS programs (and I don't know if it's ALL of the APRS
programs, or just those with SPACE modes - my inexperience is showing
here!) will decode the <UI> frame to get the grid square, the icon,
and the bulletin text.

Pete,

Image Mir.bmp has not aquired sync lock hence the shifted frame with the
green h drive bars on the side. As soon as you see this hit ReSync
on the SSTV program. I don't use Win95sstv so I can't help you there.
I am using ChromaPix which has resync ability.
You started recieving late in the transmission and the end of picture is
indicated where the noise starts.

Mir4.bmp shows a shot looking out the Priroda module window at the
overexposed (their fault, not yours) Spektr module. The white lines
are solar panels and the curve in the upper left is the edge of the
window frame.

The speckles are noise in the recieved signal. Beams, preamps, or closer
passes will help this. Also in the New York area is an illegal Parrot
repeater we are df-ing that is retransmitting rf on 145.980 this has
been screwing up lots of folks near it.

The slanting green line on the right is a slight miss timing of the sync
and can be trimmed out by adjusting the sstv programs timing. (software
control in the program)

Gotta go, Mir's coming by again. Had SSTV this (Monday on the first pass
here in NJ)

Good luck, let us know how you make out

ZCZC
SB ARLX002
Newington, CT
February 15, 1999
To All Radio Amateurs:

The following new satellites were announced today:

GAYSAT- Funded by Lambda, design flaws are expected to add a lisp to all SSB signals.

LESBOSAT-Funded by Lambda, a post launch mishap has resulted in SSB signals losing higher audio frequencies in favor of low ones.

BLACKSAT- This satellite is not expected to work a day in its life.

HISPANISAT- At age 15, this satellite should start releasing smaller satellites by the car load.

ANGLOSAT- The makers of this white satellite have placed it in a orbit where the sun never sets (they think).

PIZZASAT- Named for its red, round shape and large white dish antennas for the microwaves.

EIRESAT- This satellite has had difficulty following a straight line late on Friday and Saturday nights.

BUNDESAT- It is expected this satellite will conduct itself in a calm, orderly, calculating, methodical manner.

SUPREMICISTSAT- This satellite is currently under a white sheet in the lab.

HILLARYSAT- A real bitch to operate.

MONICASTAT-7 - This store and forward satellite carries information on sexually transmitted diseases.

468. Yaesu FT-767GX UHF module

Newsgroup: rec.radio.amateur.space
Date: 1999-02-15 00:00:00 UTC
From: Jim.Hansen@stpete.honeywell.COM
Message-ID: <208136F43899D2119A5B00805FCCF971380543@fl51m02.stpete.honeywell.com>
Source record: 13682

Has anyone ever attempted changing a FEX-767-7A module (430-440 MHz) to cover 440-450 MHz?

The only difference is see in the schematics as on the PLL where two tuned cavities (CV2001 and CV2002)are different part numbers and a jumper is changed from divide by 41 to divide by 42.

I have performed a search, but have not found any information of anyone trying any changes to this module.

Also, how does the radio figure out which UHF module is installed such that it displays 43X. or 44X. MHz?

My primary plan is to modify the module I have, hopefully in a manner that would allow me to easily switch between the upper or lower portion of the band. If this turns out to not be feasible, I would like to trade the FEX-767-7A module (430-440 MHz) for a FEX-767-7B module (440-450 MHz). Anyone interested? My module is currently stock, unmodified, untouched by anyone but Yaesu.

Please Email replies to Jim.Hansen@stpete.honeywell.nospam.com (remove nospam from address).

Thanks
Jim
WD0DIA

469. ATTENTION: UHF from the Mars Climate Orbiter in Deep Space!

Newsgroup: rec.radio.amateur.space
Date: 1999-02-15 00:00:00 UTC
From: "Conrad - [PA-3171]" <nl7sts@space-man.com>
Message-ID: <7a9psuqkl1@reader3.wxs.nl>
Source record: 13683

Subject: ATTENTION: UHF from the Mars Climate Orbiter in Deep Space!
Author: "John L. Callas" <John.L.Callas@JPL.NASA.GOV>
Date: 2/11/99 10:13 AM
ATTENTION ATTENTION ATTENTION ATTENTION

Dear Radio Amateurs,
I know this is short notice. We are planning on performing a deep space test of the UHF system on the Mars Climate Orbiter (MCO) next week. As many of you know, NASA will be using UHF (~400 MHz) extensively for relay communications at Mars between orbiting spacecraft, and landers, rovers and microprobes on the surface of Mars. In preparation, we are scheduling to test the UHF relay system on MCO using the 46-meter antenna at Stanford University. Some of you may remember we did this with MGS. The difference (for you amateurs) this time is the test is much shorter in duration and the signals are much weaker. The MCO spacecraft will be approximately 16 million kilometers away!
Here are some details on the test. The UHF system on MCO will be transmitting at approximately 437.101 MHz with right circular polarization.
We do not know the exact frequency of the transmission due to the unknown temperature of the transmitter at power on. The signal is frequency shift keyed (FSK) modulated with a modulation index of 2. The modulated bit rate is 8003 bits/s. This means expect two sync functions at +/- 8003 Hz from the center frequency. There is no carrier in this signal. The UHF system will "ping" every 3 seconds. This means for about 166 ms every 3 seconds there will be a modulated signal. The rest of the time there will be nothing. Approximately 1328 bits of data are expect within each ping. The data are actually a fixed pattern of mostly alternating ones and zeros.
The transmit power will be around 16 watts but with an EIRP of about 29 dBm. This small number is due to the obstruction from the high-gain X-band antenna blocking the UHF antenna's view of Earth. This number is only a rough estimate and could be much worse.
The first test opportunity will begin at approximately 0700 UTC on 1999-02-16 and extending until approximately 1100 UTC. The spacecraft distance at the start of the test is approximately 15,696,800 km. The approximate start and end times depend on the actual spacecraft commanding that will be done in realtime. So the total test time for the first day will be less than 4 hours. If Stanford is unsuccessful on the first day in detecting the signal, a second test may be performed the following day beginning approximately 0700 UTC on 1999-02-17 and extending until approximately 1050 UTC. The spacecraft distance at the start of the second day's test is approximately 15,830,800 km.
Here is the latest prediction for the position of MCO during the two

opportunities for the UHF Ping Test next week. The data are calculated
for geocentric coordinates. The Doppler offset, referenced to geocentric
coordinates, is calculated from an assumed frequency of 437101000 Hz.
Date Time Range Dec RA Rate Doppler Offset
[UTC] [UTC] [km] [deg] [deg] [km/s] [Hz]
990216 070000 1.57E+07 12.39 221.64 1.5639 -2280.2
990216 080000 1.57E+07 12.39 221.63 1.5628 -2278.5
990216 090000 1.57E+07 12.39 221.62 1.5616 -2276.9
990216 100000 1.57E+07 12.39 221.62 1.5605 -2275.2
990216 110000 1.57E+07 12.39 221.61 1.5593 -2273.5
990217 070000 1.58E+07 12.41 221.49 1.5376 -2241.9
990217 080000 1.58E+07 12.41 221.48 1.5366 -2240.3
990217 090000 1.58E+07 12.41 221.48 1.5355 -2238.8
990217 100000 1.58E+07 12.41 221.47 1.5345 -2237.3
990217 110000 1.59E+07 12.41 221.46 1.5335 -2235.8
To assist you in determining the possibility for detection, I have
included the link analysis for Stanford:
Spacecraft MCO
Frequency [Hz] 437101000.0
Wavelength [m] 0.686
Transmit Power [dBm] 42.0
Antenna Gain [dBi] -12.0
Circuit Losses [dB] -1.0
Earth-Spacecraft Range [m] 1.58E+10
Space Losses [dB] -229.2
Receiving Station Stanford
Antenna Diameter [m] 45.7
Antenna System Efficiency 0.50
Antenna Gain [dBi] 43.4
Antenna Effective Area [m2] 820.9
Half Power Beam Width [?] 1.2
Polarization Loss [dB] -2.4
Misc Loss [dB] -0.35
Receiving Signal [dBm] -159.6
System Temperature [K] 85
Noise Spectral Density [dBm/Hz] -179.3
Search Bandwidth [Hz] 8003.0
Instantaneous SNR [dB] -19.3
Effective SNR [dB] after 1 ping -3.7
Effective SNR [dB] after 1 min 2.8
Effective SNR [dB] after 4 min 5.8
Effective SNR [dB] after 15 min 8.7
Effective SNR [dB] after 1 hour 11.7
Effective SNR [dB] after 4 hrs 14.7
Unfortunately because of the low signal levels, only the largest amateur
antenna operators will have a chance of detecting the signal. In order
to have any chance of detection, you will need to integrate for several
minutes if not hours. And because of the limited test duration, only
those amateurs in the Western Hemisphere will be able to attempt a
detection. In any case, we welcome all radio amateurs to listen for the

signal.
Additionally, we would like to ask all those amateurs in the San Francisco Bay Area to refrain from transmitting near 437.1 MHz during the times of the two test days. RFI is our biggest headache when we attempt these weak signal detections. Your assistance would be greatly appreciated.
Please feel free to forward this information on to any other radio amateurs. I will post any updates to this information on the Mars-Net list service. And, of course, I would like to know of any attempts (and successes) of detecting the UHF signal from MCO. I hope you will join us in this adventure of Deep Space Exploration!
Sincerely,
John Callas

Hello.

Are you an Kansas City Tracker user ?

Than mabe you wil share some information ?

I'm collect all the names of programs that works with the KCT !
It doesnt matter what for program !
Than I'll make a list of it of all available programs and put it on my home page so that all user of this card can see the software possibillities !

PLEASE, vissit my homepage http://www.ping.be/~p4u11324/ and fill in the KCT Question form.

Geert Pirens
Vissit my home page: http://www.ping.be/~p4u11324/

471. ATTENTION to all Kansas City Tracker USERS !!!!

Newsgroup: rec.radio.amateur.space
Date: 1999-02-16 00:00:00 UTC

Hello Kansas City Tracker Users.

I'm collect the names of all the available programs that being written, or suppot the kansas city tracker.

All these information wil be placed in a Database and wil be available to all of you.

On my homepage http://www.ping.be/~p4u11324/ you wil find a list of all available software.
If you know a program that not being in the list, PLEASE fill in the Question form:

If you click here, you go wright to the question form
http://www.ping.be/~p4u11324/KCT_Ques.html

Thanks to all of you !

Message-ID: <36C979A5.4BD815B8@ix.netcom.com>
Source record: 13688

Derf,
"Converting to RGB" in Photoshop merely allows you to seperate the RGB palletes of your picture, which is greyscale (they'll all still be grey). You have to change one of the palletes to add "color" information. In this case we're using the IR portion of the NOAA image to represent the Blue portion of the RGB pallete. Paste the IR image into the blue layer and the recombine the layers. You'll have a color picture. If you like, I can send you a pix I've colorized.

Regards,
Rolf

As pointed out already K6SEX is a callsign that does not belong to a man named Ben Dover. But don't take my word for it, check one of the several call sign databases.

So Mr. Ben Dover, who are you and what is your real agenda? How do you stand to profit taking part in these debates?

It makes me wonder how many of the nasty messages posted regarding ARRL / code / nocode / etc issues are really done by people who are not amateurs and have some hidden agenda of their own.

Tom

478. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-02-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7actid$r81@news.Hawaii.Edu>
Source record: 13692
Cross-posted to: rec.radio.amateur.space,rec.answers,news.answers

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, WH6U, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your

article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

From: afranco@rc.mayfield.hp.com
Message-ID: <7ag9svhlb1@nnrp1.dejanews.com>
Source record: 13599
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.space

Hi,

I am attempting(Big Attempt) on homebrewing a crossed yagi for 2m to use for Sat's. I have two,Five element, yagi's on one boom, 90 degrees from each other. Also, one set is mounted 1/4 wavelength ahead of the other.

Referencing an older ARRL Antenna book, it mentions some tips on phasing crossed yagi's. For my set up it states that you would feed both yagi's with equal length feedlines.

To do this would I need a "splitter" or just a T-connector on the coax?

Would there be problems on the impedance match assuming both yagi's are 50ohm?? Also, what polariztion would result?? RHCP or LHCP?

Any help would be greatly appreciated..

Afranco

>crossed yagi's. For my set up it states that you would feed both yagi's with
>equal length feedlines.

Yes, you have physically provided the proper phasing by mounting one
antenna's elements a quarterwave ahead of the other.

>To do this would I need a "splitter" or just a T-connector on the coax?
>
>Would there be problems on the impedance match assuming both yagi's are
>50ohm?? Also, what polariztion would result?? RHCP or LHCP?

Ok, you have to impedance match the combination. There are at least two
ways to do that. One way is to just combine the two antenna feeders (using
any equal lengths) at a Tee and then transform the resulting 25 ohms up to
50 ohms using a quarterwave section of 37.5 ohm line. You can buy this in
the form of a two port combiner which is a Tee and a quarterwave rigid
37.5 ohm line all in one.

The other way is to use two quarterwave lengths of 75 ohm line (ordinary
CATV coax will do), one from each antenna feedpoint to the Tee. The third leg
of the Tee will then be matched to 50 ohms. (What's happening here is that
the quarterwave 75 ohm line section transforms the antenna impedance to
100 ohms and the Tee then parallels the two 100 ohm impedances, yielding
50 ohms for the run to the radio.)

You can select LHCP or RHCP depending on which side of each driven element
is fed by the coax inner and which is fed by the coax outer. A double pole
double throw relay can be configured to swap this for you to give you selectable
polarization (only one antenna's driven element needs to be swappable).

Source record: 13602

: Has anyone used a Winradio as part of an Amateur Radio Telescope? If so, do
: you think Winradio is suitable for the purpose?

I purchased one which I use for meteor counting and for that it is superb.
I plan on trying Io Storms on Jupiter in the future when I get a new antenna.
Unfortunately the WR doesn't go low enough to do solar work. It also picks up
satellites very easily (although that isnt RA). I've had alot of fun with it
and can't wait for the meteor season to start up again. So far I think it is
a good way for someone to get started in RA but after a few years you may
want a dedicated receiver and antenna system. Get the 1500 also since it has
better coverage.
I also recommend getting the external version. The Internal is an ISA card
which eats up CPU cycles and physically it is simply HUGE. The biggest
expansion card I"ve ever seen. It's doubtful some mass manufactured computers
would even have room for it. Also, the advantage for an external is that if
you ever get a laptop then you can take it out with you in the field. So
during a meteor shower, for instance, you can watch the meteors and hear
their echos at the same time.
The WR does a pretty good job of filtering computer interference. I usually
only detect it in the HF region and most of that can be eliminated by turning
off your monitor.

Your right, there is ALWAYS someone connected. Within a second or less of a disconnect someone else gets in. My advise would be not to over do it with the UI's, be reasonable. There's really no need to go nuts with it, a quick,short hello is all that you need to send to someone. What *I* get upset about is when people connect to me through Mir. This REALLY slows things down for all. Also, some folks seem to be on at EVERY pass, there is really no need for this either. Give up a pass or 2 and let others have a shot!

Just my 2 sense...

73!

Source record: 13611

MOSCOW (CNN) -- A Russian, a Slovak and a Frenchman are scheduled to blast off Saturday from Baikonur Cosmodrome in Kazakhstan for a six-month mission that may mark the swan song for Russia's aging Mir space station.

Cosmonaut Viktor Afanasyev, 50, who will lead the crew, said last week he still hopes he won't be the one to bid farewell to the beloved Mir, the pride of Russia's space program.

"We hope that we will have a replacement," Afanasyev, a Mir veteran with 357 days logged in two stints on the station, said at a news conference.

After they leave, if no money is found to finance a replacement crew, Mission Control will fire the engines on Mir's cargo ship to send the station plummeting into the ocean.

Afanasyev and his crewmates -- Frenchman Jean-Pierre Heignere and Slovak Ivan Bella -- are scheduled to blast off at 7:02 a.m. Moscow time aboard a Soyuz TM spacecraft. Not-so-coincidentally, the launch date marks Mir's 13th anniversary on orbit.

They will reach Mir in two days. After an eight-day stay on the space station, Bella will return to Earth with the Mir's current commander, Gennady Padalka. Padalka's crewmate, Sergei Avdeyev, will stay aboard with Afanasyev and Heignere through August 23.

NASA has long urged Russia to forgo the Mir and commit its meager resources to the International Space Station, a 16-nation project that is a year behind schedule because of Russia's failure to build a key segment on time.

The government had planned to discard Mir in June, but the station was given three more years of life when a private sponsor was reportedly found to pay for its operation, rather than the cash-strapped government.

That hope faded last week when Russia's space chief, Yuri Koptev, admitted that the mysterious investor so far had failed to come up with money.

The station has been running relatively trouble-free since a string of breakdowns and accidents in 1997 that culminated in a near-fatal collision with a cargo ship.

Earlier this month, the program suffered another embarrassing setback when the Mir crew was unable carry out an ambitious experiment involving a giant "space mirror."

The mylar reflector was supposed to unfold like an umbrella, then reflect the sun's light to dark corners of the Earth

But the mirror got snagged on a Progress supply ship antenna and failed to unfurl. The cosmonauts were forced to abandon the experiment and send the mirror hurtling back toward Earth, where it incinerated in the atmosphere

Thnx Gary,

I'll give it a shot with the CATV coax idea..

Any thought's on a home brew T-match? I'm thinking of using the one suggested in the 1998 ARRL Handbook for their 144mhz yagi..

another way.... use a gamma match on each dipole, tune each leg for 100R
and mininmum reactance (not sure on reactance statement). parallel the
two gamma matches and feed with 50R coax. at the gamma's junction.

Do I detect a "reserved for aliens only" slant on this position? This is the sort of thing AEA and IEEE have been fighting for years. What is your company's name that we may check up on how many requests it had for H1 visa's last year? How many U.S. citizen engineers have you interviewed for the position?

Hi...

I'm cleaning house. I'd like to sell out some of my satellite books.
I have the following books for sale. (Sorry, I don't want to separate
them....buy them all, one price.)

ARRL The Satellite Experimenter's Handbook
by Martin Davidoff K2UBC
Retail: $20

The ARRL Satellite Anthology (2nd Edition)
The Best of Recent QST articles on amateur satellite operation and hardware
Retail: $8

ARRL Weather Satellite Handbook (Fourth Edition)
by Dr. Ralph E. Taggart, WB8DQT
Retail: $20

The Amateur Radio Astronomer's Handbook
(Build your own radio telescope!)
Retail: $19.95

I'm asking $25 for the whole package (plus $5 shipping).

If interested, please send email to the address listed in
the signature below, and we can swap address particulars,
or I can answer any other questions you might have.

Thanks...

Ken, N1NEG

--
My real email address is almost "ken@wino!!!!!grad.com".
Just delete the exclamation points, and it's for real.
Sorry about this complication, just trying to avoid spam mail.

505. Re: Tabular tracker??

Newsgroup: rec.radio.amateur.space

506. SSTV from MIR

Newsgroup: rec.radio.amateur.space
Date: 1999-02-21 00:00:00 UTC
From: Scott Nimmo <scottvet@usa.net>
Message-ID: <919599575.831.0.nnrp-02.9e98ae7e@news.demon.co.uk>
Source record: 13621

Some basic advice please.

I have recently become interested in MIR, I can hear the SSTV output well.
What is the simplest way to view the SSTV images. I have in the past worked
SSTV on 2 M using JV- FAX and a simple Hamcomm interface.

Thanks

Scott Nimmo [G6OJB]

Do you mean you can receive images but can't view them?
I use win98sstv, it uses your soundcard. Plug a mic in and put the mic in
front of you rigs's speaker. The photo slowly appears on screen as the image
is being sent.

73,
Tom

Tom & Scott,

You will get much better pictures if instead of inputing thru the
mic/speaker just run a mini plug from the radios external speaker jack
directly into the sound card line input. The software I use is ChromaPix
from
Silicon Pixels. Both Win95 sstv and ChromaPix are available at this
address as well as hook up info. http://www.siliconpixels.com/index.htm

Good Luck

Hi Ciemon and the group.
You might want to download Simple Tracking program (STE.EXE) from the
AMSAT ftp site. This program is rather difficult to set up but is a text
only program that will refresh itself. It is capabile of thirty or more
satellites but usually one screenful of ten or so is more than enough!
Cliff K7RR

Hi Ian!
I have no idea and kind of doubt it. SSTV was running today, got one decent
shot.

73,
Tom

Ian,

I wouldn't get my hopes up of the SSTV being on for the docking.
I believe the docking checklist calls for all nonessential transmissions
to be off so that the is no interference with the radar and telemetry
during the docking approach.

We can hope though.

Source record: 13630

I'm kinda new to all this and am wondering about how to best set up to work AO-27 without having to throw a lot of money at new equipment.

I've managed to work the satellite - barely - using my HT and a telescoping antenna that's a bit better than what came with the radio (ADI AT-600). I also have a Kenwood mobile(TM-V7A) that I use as a base. For that radio I use a Diamond X-200A (5/8 wave, 6.0/8.0 db) dual-band vertical base antenna mounted on my roof. I haven't been successful at all with this rig and know that at least a good part of the problem is that the antenna is omnidirectional. But what I'm wondering is whether I can get any improvement by hooking up a pre-amp to the antenna that would make this setup feasible.....?

Don't know anything about pre-amps and would need to know a little about brands, types, costs, tuning, etc.

Any advice would be appreciated - incluidng being told, "don't bother."

Thanks and 73,
Jim

SpaceNews
=========

MONDAY FEBRUARY 22, 1999

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* SUNSAT LAUNCHED! *
====================
Although this issue of SpaceNews is going out late this week, the delay
made it possible to announce the sucessful launch of Amateur Radio's newest
satellite. K7RR reported via W7RAQ that the Delta II rocket carrying
the South African "Sunsat" satellite was successfully launched on the
morning of Tuesday 1999-Feb-23 at 02:20 Pacific Standard Time. This
launch came after 11 unsuccessful attempts to launch the Delta II from
Vandenberg Air Force Base in California. Sunsat successfully separated
from the Delta rocket at T+1 hour, 40 minutes.

* FO-29 NEWS *
==============
A new operating schedule for the FUJI-OSCAR-29 satellite has been
announced due to a problem in placing the satellite in "Digitalker"
mode. The latest schedule is as follows:

Mon 1999-Feb-22 -to- Mon 1999-Mar-08 Mode JA
Mon 1999-Mar-08 -to- Thu 1999-Mar-18 Mode JD 1200 baud (BPSK)
Fri 1999-Mar-19 -to- Tue 1999-Mar-23 Digitalker
Tue 1999-Mar-23 -to- Tue 1999-Mar-30 Mode JA

[Info via Kazu Sakamoto, JJ1WTK]

* OSCAR-11 NEWS *
=================
Mode-S enthusiasts may be interested in an Spectrogram plot of OSCAR-11's
Mode S beacon kindly submitted by Mike WL7BQM. Refer to mode-s reports
below, for details.

During the period 1999-Jan-17 to 1999-Feb-16, good signals have been
received from OSCAR-11's 145.826 MHz beacon. The battery voltage has
dropped slightly, averaging 13.7 volts. This is during afternoon
```

passes when the satellite has been illuminated for some time. During a couple of early morning passes when the satellite had been in darkness for some time, battery voltages of 13.1 and 13.2 were recorded by observers.

The magnetorquer spin correction counters have again showed very few spin counter increments, although the spin period remains around its nominal value of -300 seconds. However, the Z axis counter increments normally.

The internal temperatures have fallen by about two degrees C. They are now 5.4C and 3.8C for battery and telemetry electronics respectively.

A single WOD survey dated 1999-Jan-06 of solar array currents and array voltages (ie: channels 10, 20, 30, 40 (+Y, -X, +X, V)), has been transmitted by the satellite. The sound of this WOD contains a characteristic musical tone that occurs when the constant data captured during solar eclipses is transmitted.

Reports of the Mode-S beacon thave been received from Mike, WL7BQM in Stirling, Alaska and Al, KD4VA in Sumpter, South Carolina. Mike uses a six foot dish, Drake converter and preamplifier. The main receiver is a FT-736 modified with a MuTec front-end. Mike's good signals can be seen from the AF9Y FFTDSP42 spectrogram plot, which he kindly sent Clive Wallis. Clive has since added this graph to his OSCAR-11 web site. It's located in the 'GRAPHS' section, and it shows the Doppler effect on frequency, and variation of signal strength.

Mike has observed a reduction in signal strength when the satellite goes into eclipse, although this may be due to path obstructions, rather than power supply reduction.

Al uses a Meyers dish for Mode S reception along with a DEM pre-amp and a Drake downconverter. He receives the beacon just above the noise level.

The operating schedule is unchanged:

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

The ASCII bulletin is currently a static message, detailing modes and frequencies of all the amateur radio satellites.

There are additional status blocks after each bulletin is transmitted, and between ASCII TLM and WOD.

The Mode-S beacon is ON, transmitting an unmodulated carrier, but telemetry indicates that it has partially failed, and delivering half

power. This beacon is a useful test source for those testing mode-S converters, prior to the launch of P3-D. It is considerably weaker than DOVE, which should be used for initial testing. Any reports of reception of OSCAR-11 on 2401 MHz would be most welcome, and should be directed to Clive Wallis at: g3cwv@amsat.org.

OSCAR-11's 435.025 MHz beacon is normally OFF. However, it can sometimes be heard when the satellite is being commanded by ground control, ie. within range of Guildford, UK. When the 435 MHz beacon is transmitting, the 145 MHz beacon is normally OFF. The data transmitted is mainly binary.

Listeners to OSCAR-11 may be interested in visiting Clive's OSCAR-11 web site. The web site contains details of hardware required and some software for capturing data, and decoding ASCII telemetry and WOD. There is an archive of raw data (mainly WOD) for analysis, which is continually being expanded as new data is captured. Also included are some audio files, that include example of each type of data transmitted by OSCAR-11. Each one plays for about ten seconds. There are also examples of Mode-S reception. All the audio files are zipped, so that they can be played off-line. These should help listeners identify the various types of data transmitted by OSCAR-11, and give an indication of the signal quality required for successful decoding.

Lambda ARC ~ Faggots with a purpose.

ARRL BOD bent over and got screwed by Lambda, and now the ARRL BOD tells the membership to bend over so we can get screwed too. The ARRL has gotten too damn liberal. With their restructuring proposal they want to make all radio enthusiasts one big happy family.

Well I won't associate with Faggots, CBer's, or sick-lame & lazy Morse Code haters. ARRL needs to get back to the core values that Hiram Percy Maxim, W1AW, stood for and quit catering to idiots and candy-ass cry babies.

- .-. -.-

Radio Defender, you can't win against the arrl, they don't care about honor,
and integrity anymore.

As for Lambda, some people will join anything for a free blow-job.

Horrible, isn't it? I think the only recourse is for you to get out of
ham radio altogether. Yes, that's it... just give up on that disgusting
thing called ham radio and move on to an activity where you can
associate with right-thinking people. Maybe something that involves
wearing bedsheets.

Ham radio won't be any the worse for your absence.

Consider this,

Could the A.R.R.L board of directors and staff be Lambda members to? That sure would explain alot of things.

Finally someone figured it out. The Board also voted NOT to publish
even one word of the information on the FBI admitting to jamming the
Amateur Radio Service, available at the website below.

The goal at ARRL is membership dues at all cost, if they have
to become criminal co-conspirators, and become guilty of
misprision of felony (18 USC 4), or invite Sodomites into
the League they will. The root of all evil is the love of
money.

Hi ya Dave!

The cause of your 'junk' images is explained in an email sent to the SAREX list. A copy follows.

As to the duplicate images - that's the normal sequence, an image, pause for a bit (30 seconds I think) and then the same image is resent.

Here's a couple links that may help you in your MIR endeavors as well.

http://www.amsat.org (general Hamsat info)
http://www.siliconpixels.com (great SSTV software!)
http://www.celestrak.com (great source for keplerian element sets and tracking software)
http://www.riglib.demon.co.uk/index.htm (FOOTPRINT - Windows tracking software)
http://liftoff.msfc.nasa.gov/temp/Mir_Loc.html (online MIR tracking)
http://liftoff.msfc.nasa.gov/RealTime/jtrack/Amateur.html (J-track online sat track)
http://www.geocities.com/~ik1sld/mirex.htm (MIREX home page)
http://www.geocities.com/~ik1sld/mirex_news.htm (Latest news from MIREX)

Good luck and happy SSTVing!

::header stuff snipped::

Feb 23, 1200 utc

Hello everyone:

The MAREX-NA SSTV system on Mir is currently Stuck. It is sending the same corrupt image over and over again. This is not a serious problem. A simple power-cycle should reset the buffer and the SSTV system will start again.

We had this same problem once before in December 98. Today I am planning our we weekly telecon with MAREX-Russian and we will discuss the minor problem.
We think the problem is caused by solar radiation, upsetting the CPU on the analog codec. The codec is shielded inside an aluminum box, and on the bottom of the box where the CPU is located, there are two sheets of aluminum. If
it is a Radiation problem, we will need to take what we have learned and try to build a better system for ISS. We have reviewed other vendors SSTV Codecs and some of them are housed in all plastic boxes. These plastic SSTV Codecs may be more susceptible to Radiation problems than ones housed in sold aluminum boxes. More investigation is required.

(anyone know what last nighths solar forcast was?)

73 Miles WF1F MAREX-NA

I understand that it CAN'T be turned on. Apparently, something in it
failed shortly after launch. It was supposed to be a Mode A satellite.
Bummer

Regardless of my feelings about Lambda, which is less than enthusiastic
some facts remain:

1) The ARRL is required by law to accept their advertising.
2) The ritual code hazing is required by law as well....for now.
3) These kind of posting do nothing but weaken Amateur Radio by dividing
the operators.
3a) Seem to always be posted by individuals with aliases.

The ARRL was forced by court order to accept advertisment by the Lamda
group. This does not mean they liked it.

I agree the ARRL needs to get their head out of their collective rears and
wake up and smell the roses. But this is nothing new. Instead of sitting
around and bitching, might I suggest we ALL join it, then throw the bum's
out that you don't like.

They (ARRL) long ago lost sight of the original idea's of HPM. And BTW
what does " T R K " mean?

First and foremost, thank you ever so much for not wanting to associate
with us. Saves us the hassle of having to think of a tactful way to get
rid of you...

Then, please keep 1AW out of this. The world loves and remembers him for
uniting hams, not for dividing them. He certainly wouldn't have been
pleased about your posting.

Well and, last but not least, welcome to the killfile.

542. SSTV help on MIR

Newsgroup: rec.radio.amateur.space
Date: 1999-02-24 00:00:00 UTC
From: ypwhich@hotmail.com
Message-ID: <7avujv$o2o$1@nnrp1.dejanews.com>
Source record: 13644

Greetings SSTV'ers. I'm using the demo version of WinPix32 with an older Kenwood HT handheld with the audio fed into a sound card. I left it on for a few days, and did get some images that automatically were captured at the appropriate times when the MIR went over. My problem is this - the images are junk. I'm using Robot 36, which I got off a couple of webpages. The antenna I'm using is a GP-15 vertical mounted really high. It has about a 6db gain and I have extremely low loss feed line running only 20 feet. I am not accounting for Doppler (I'm guessing that a one minute portion in the middle of the pass will be good enough to grab the image while ignoring Doppler.) I have the images up on my website in case some of you can use them to identify why I'm getting garbage. http://www.eecs.wsu.edu/~ritz/sstv

I find it very interseting that the images received within 2 minutes of each other are identical, but still junk.

Do I need a preamp? An eggbeater antenna? Must I account for Doppler? Robot 36?

Thanks for your help

It doesn't sound like packet, it sounds like.....a high pitch warbling sound
really. 14.230 USB is where most of the action is during the daytime. The SSTV
net is very active there. There may be some SSTV talk between pictures but it
lasts all day, every day. Mir (when in SSTV mode) sends a picture every 1-2
minutes with an R0MIR CW ID before the photos are sent. Mode is Robot 36.

There is no sked, they were supposed to do SSTV on weekends but I guess they
get busy doing other things (they are up there to work after all!). Just keep
monitoring for now.

73,
Tom

My suggestion would be to visit the Amsat-NA web site for starters. The url is http://www.amsat.org This newsgroup is predominantly for amateur radio operators who like to work the amateur satellites and the Mir space station and hopefully in the near future the International Space Station. To learn more about the amateur radio hobby, I suggest that you visit the ARRL web site. The url is http://www.arrl.org

550. Historic Roton SpaceShip Rollout to be WebCast Live

Newsgroup: rec.radio.amateur.space
Date: 1999-02-25 00:00:00 UTC
From: David Anderman <davida@cwo.com>
Message-ID: <36D4EB93.6142CD44@cwo.com>
Source record: 13516

FOR IMMEDIATE RELEASE: Los Angeles, CA, {February 25, 1999} -- The historic rollout of the prototype for America's first privately financed spaceship will be carried live on the WorldWide Web. The Space Frontier Foundation, an international space policy and media organization announced plans to broadcast the March 1 ceremonies as they happen at the Mojave Spaceport, north of Lancaster, California, near Edwards Air Force base. Said Foundation President Rick N. Tumlinson, "The rollout of the Roton represents the beginning of a new era in space, and if it is successful will lead to access to space not just for astronauts, but for ticket purchasing passengers - and within a couple of years, not decades."

The rollout event, available for viewing at http://ROLLOUT.ORG, will feature noted author Tom Clancy, Space Frontier Foundation President Rick Tumlinson, Rotary Rocket Company President Gary C. Hudson, and NASA and FAA officials.

The Rotary Rocket Company, the Redwood Shores, California company building the Roton, plans for its pilots to fly the initial prototype within the atmosphere as a first step towards a later vehicle intended to reach orbit. Possible cargo for this orbital vehicle will range from telecommunications satellites to passengers.

The Space Frontier Foundation is a national space policy organization dedicated to opening space to human settlement as soon as possible. The Foundation, which coined the term "Cheap Access to Space," has led a campaign to bring the cost of space transportation down for almost a decade.

The March 1 webcast will be recorded for playback after the Mojave event ends.

-30-

The Space Frontier Foundation is an organization of people dedicated to opening
the Space Frontier to human settlement as rapidly as possible. Our goals
include protecting the Earth's fragile biosphere and creating a freer and more
prosperous life for each generation by using the unlimited energy and material
resources of space. Our purpose is to unleash the power of free enterprise and
lead a united humanity permanently into the Solar System."

For information on the Foundation call 1-800-78-SPACE

553. do I need duplexer with arrow satellite antenna

Newsgroup: rec.radio.amateur.space
Date: 1999-02-25 00:00:00 UTC
From: Paul Lantz <plantz@onlink.net>
Message-ID: <7b3graeag1@onlink3.onlink.net>
Source record: 13519

Do I need to get the version of the arrow satellite antenna that has a built in duplexer?

If I use the antenna with a radio that cannot receive and transmit at the same time, e.g. FT-50, of what use is the duplexer?

I guess what really confuses me is the point of duplexer when radio has only a single antenna connector.

I might use the antenna with a radio that can rx/tx at same time, e.g. FT-8500 or Kenwood TH-D7.

Thanks for your comments

The Arrow has 2 wires, one for 2M the other for 70cm. Without the duplexer,
how would you run both wires into the single antenna poet of the FT50
<grin>. You really should get the duplexer for use with the FT50.

Maybe the mail boat was sunk when it crossed the Channel ;-)?
OK, bad joke ...

According to their WWW page, the "final design of the
QSL" had been released shortly before 1999/02/01, but
the update of the QSL page is overdue, too. Let's wait
a few days more, maybe the printing has been delayed.

Nothing wrong with that attitude. But, hopefully, you do not advocate using threat of force from the feds to stop the practice. What is wrong with live and let live? (Same argument for Morse code testing).

Hi Jim,

The only successful QSO's I've heard on AO-27 with HT's have been by using ARROW Antennas(That's the brand name). Any sort of directivity and antenna gain helps thou..

I'm still in the "listen_only" mode at this time. Havent finished my 2m yagi yet. The 2meter Egg-Beater antenna doesnt work to well :-(.

I'm a multimedia design studnet...I've had an idea...
If you want me to slap together a reasonable web site for you, get in touch.
I find reading the group so fascinating that just the content of the site
would make it too entertaining for words....I'll build (and even host, I've
got 50MB of space anyway) for nothing...just let me know whats going on.

Visit my (unfinished, ironically) site....

Depends on what you mean by "try to listen in on them". Hams have monitored the Mars Global Surveyor, an interplanetary Mars orbiter two years ago enroute to Mars, which had a beacon on the 435 MHz band. It was done as a test of how well hams could measure extremely weak signals with minimal equipment.

Hams often monitor planetary noise, such as that generated by Jupiter. It's fairly easy to do around 20 MHz.

If you mean "do hams listen for extraterrestrials", the answer is yes, but.... There are many hams assisting the SETI group. They monitor a wide range of frequencies, mostly outside of the amateur bands.

Hope that answers your question.

Rick T.

None are so blind as those who will not see.
You can read the confession by FBI's John Kaul at:
http://www.atlcom.net/~geozim/docs/fbi_ging.htm
beginning at third paragraph, starting with "It
is essential..." FCC admits to holding classified
documents on the amateur station at Mount Carmel
Center and the two Extra Class operators there.
In addition FBI jammed licensed AM and FM radio
stations and TV stations in the Waco, Texas area.
Ambassador Holmes of DOD, additionally states that
US Air Force aided in jamming TV stations.

You can launch your own effort to find out if
any Elvis was present. FBI has my FOIA request on
a 5 year backlog; FCC has patently violated the
exemption requirements of FOIA, claiming that
further responses would allow me to home in on
the nature and content of the classified documents
pertaining to jamming operations. FCC illegally
supplied the jamming equipment to the FBI, according
to the Dallas Morning News.

YOU DECIDE!!! WOULD FBI ADMIT TO A CRIME THAT DIDN'T
HAPPEN???

Ham radio used to be a good family hobby, even for kids.

Now we have foul mouth no-code CB'er type hams that have brought their bad CB habits with them to our repeaters and their language is often indecent, obscene, or profane.

And then there are the lambda queers, who molest little boys in the name of radio. Give's new meaning to the phrase "elmering your kid." You don't want your kids to think think it's OK to be GAY even if it is a mental handicap.

It's no wonder the U.S. ham community isn't growing, who wants to join a hobby that's full of filth?

Tess

well there looks like hope on the way ... the FCC is starting to stop
such action on repeaters ... even to the point of shutting down a
repeater in the San Franciso, CA area.

582. FS PacComm sat modem set

Any gutless person can be a libertarian. Sure, live and let live just as long as the other guy doesn't effect me. Pretty selfish too. A libertarian is just a liberal with no guts to admit it.

Kevin, WB5RUE

A liberal measures compassion by the number of people he is helping.
A conservative measures compassion by the number of people who no longer need his help.

Yep Tess, that's what happens when you lower the standards and cater to every imaginary "right" that liberals can think up. Amateur Radio Operations is a PRIVILEGE that must be EARNED.

588. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-03-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7bdc2h$kvb@news.Hawaii.Edu>
Source record: 13554
Cross-posted to: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

590. VHF apt weather satellites

Newsgroup: rec.radio.amateur.space
Date: 1999-03-01 00:00:00 UTC
From: lawrence@itchycoo-park.freeserve.co.uk
Message-ID: <36e1b575.42348406@news.freeserve.net>
Source record: 13556

SUMMARY for March

Current transmissions include:

NOAA-12 137.50MHz a.p.t. (images) and a beacon on 136.77MHz.
NOAA-15 137.50MHz a.p.t. (images)
NOAA-14 137.62MHz a.p.t. (images) and beacon on 137.77MHz
METEOR 3-5 a.p.t in sunlight only
RESURS-O 1#4 137.85MHz a.p.t. (images) in sunlight.

OKEAN-4 (a.k.a. 1#7) occasional imagery on 137.40MHz
SICH-1 occasional imagery on 137.40MHz

The transmissions are strong enough to hear using a simple dipole and
rx. To decode the images you would require a proper antenna and
proper receiver.

> than DOVE, which should be used for initial testing.

I've been trying to listen to packet from the Dove with no luck. My understanding (From "working the easy sat's") was that the Dove could be heard without any fancy equipment. I've been at my control point for 2 passes, and have automated many passes of the Dove and have yet to hear one single packet burst or anything resembling a signal.

I can copy packet and SSTV from the Mir with no trouble.... to give you an idea of my antenna/sensitivity....

My elements are only a few days old..... also, i let it run for many days, thinking i could at least look through my capture log from my computer, and see what packet bursts came through....nothing....

I acquired a Kam Data engine very cheap (50.00) and it has a 1200 and 9600 G3RUH compatible modem installed. Can anyone help me with how to wire up the KAM to the FT-847 packet port so I can work the digital satellites ????? I am brand new at this so I have a lot of learning to do. Since I have never hooked up to a digital satellite is it different than say terresterial packet or Mir ?? I tried to find a site on the WWW to help me out with first time hook up etc. and find very little.

Hi, i just bought a vx-5r and i d like to know what do i need to use it to communicate by modem with someone? (cheap hardware...could i use a sound modem in linux? if so how does it key the PTT on and off? a special cable?)

also how do i communicate with satellite at 5Watts? is there a special antenna for that?

Any suggestion for having more fun with this radio is appreciated thanks :)

alex

> I use a BayPac modem and HP200LX Paltop PC running BayCom software.

ok and how much does this cost? (not the WinCE but the modem ;) i still
need to make my home made cable work for the vx-5 to PC interface...so i
think i wont be able to build this... :)

> Well... for Mir a simple ground plane antenna is all the is needed. It's
> quite easy to work with a ground plane, I do it mobile from a patrol car
> with a mag mount antenna and at home with a homebrew J-pole.

ok my english vocabulary surrounding ham radio isnt very good...what is a
ground plane antenna? how does it look like?

> You can work AO-27 with the rig with just a simple whip antenna. I use my
> FT50 and a MFJ-1715S to work the bird almost daily. The Arrow antenna will
> work much better, but it costs a bit more than the whip. The price of the
> Arrow is not very expensive and you'll have an excellent antenna!

same here (:) what is an arrow antenna? the whip antenna is a metal antena
like on most car? :) (ill have to learn my ham-vocabulary soon =)

i wont do packet on the road but i ll probably try to do sats
though...(while walking i dont have a car :)

this is pretty new stuff to me, at what altitude are those sats? can you
be multiple people on 1 sat using ctcss tones?(or dcs) and are there
packet sats? how does it work? hehe :) (i m too much curious :)

also, if i try to build an atenna myself how do i calculate its impedance?
(is that the right word in english ?:/)

thanks a lot!

Ian a ï¿½crit:
Meteosat and or Goes off a 1.2m OFFSET sat
> dish or is centre fed dish the only way to go ?.

Your offset should be usable with Meteosat just like with any other
geostationary sat.
The problem with an offset dish is that it is not quite straightforward
to determine where it is pointed to, because unlike a center fed, it is
not symmetrical.

> Also will this work with a stock "tin can" type wxsat lnb ?.

I doubt so. The tin can feed works best with small focal/diameter
dishes. Offsets usually have a large f/d.

Try the following page:
http://www.qsl.net/n1bwt/

WOW....

I paid $200 for mine, same set up. I am pretty confused as well with the different audio levels coming from the rig. And why two outputs from the rig? One would think the 1200 baud modem would not suffer from a 9600 baud type of hook up.

I am all ears!

Well... for Mir a simple ground plane antenna is all the is needed. It's
quite easy to work with a ground plane, I do it mobile from a patrol car
with a mag mount antenna and at home with a homebrew J-pole.

> Any suggestion for having more fun with this radio is appreciated thanks :)

You can work AO-27 with the rig with just a simple whip antenna. I use my
FT50 and a MFJ-1715S to work the bird almost daily. The Arrow antenna will
work much better, but it costs a bit more than the whip. The price of the
Arrow is not very expensive and you'll have an excellent antenna!

I don't have a Kam Data Engine or FT-847, so cannot help with the hookup, but ...

The downlink for the 1200 baud satellites is SSB, not FM. The 9600 baud receive is tapped off of the FM descriminator, so is no good for receiving SSB.

However, the uplink for both types of satellite is FM, so the same hookup will work for both 1200 and 9600 baud satellites.

Thanks for the reply John,

If I am reading you correctly, I will not be able to work any PSK birds at all since the Kantronics Data Engine & Modems are only FSK X.25

That pretty much limits it down to:

Sunsat
KO-25
UO-22
TO-31 TMSAT
MIR
SEDSAT (Down only)

Is this correct?

Thanks again.

Source record: 13575

Hi

Yes it is quite easy to receive Meteosat or Inmarsat with an offset dish of greater than 0.8 metres.

The beamwidth is wide enough to allow you to optimise the feed correctly.

Point the dish to the usual position for Astra (This is a close enough starting point for Meteosat). Construct a small dipole and reflector feed for 1.6GHz (I made mine out of 2.5mm wire) attach above normal lnb mounting position. Mount the reflector just above the cap of the LNB. Dipole feed nearest to the dish.

Listen for weak signals using SSB mode, allow for receiver tuning accuracy, find a good reference signal.

Move dish initially and then feed to optimise signals.

Let me know how you get on.

Regards

Martin

610. MIR SSTV Still going?

thanks for that most useful response Martin, all i need to know now is how to construct this dipole like you did...i am a bit behind on that front -(, APT is not as problem but actually receiving meteosat is a new thing to me (other than reading about it)

Any info on making this feed would be most appreciated as i hope to get the dish out and up soon-ish..

thanks again

SSTV is sporadic from Mir at present. The weekends were supposed to be for
SSTV but they seem to be on a random sked now. Just keep monitoring and ready.

625. best SAT program for windows????

Newsgroup: rec.radio.amateur.space
Date: 1999-03-06 00:00:00 UTC
From: Dave Edwards <ham@cybercomm.net>
Message-ID: <7bripd$9i1$1@ostrich.cybercomm.net>
Source record: 13591

Hi folks!
Well, I have not been on the 'birds' since AO13 was strong and
reliable.
Can someone update me?
I still have my Icom IC275H/475H with the satellite slave tracking
hookup that connects between the two.
The whole setup has been in boxes for quite a few years now.
I used to use Tracksat or Sattrack or something like that for DOS.
My question is this...
What is the best (shareware) program to use nowadays?
Are there any 2/432 SSB, CW satellites up now that Oscar 13
is dead?
Is the Kansas City Tracker gadjet still around?
Is that still the standard item to control rotors with the PC?
Is the Yaesu Az/El still the only show in town (If you don't want
to bother with Rube Goldberg setups)????
Thanks for any help. I sure could use a few tips to get me back
in the satellite business.
Send email to ham@cybercomm.net
.....Dave

One must remember that this station is 13 years old, most of us don't have cars that old.
When it comes to age and failing components, power useage becomes a top priority up there.
Ham radio will be the first thing turned off, it is NOT essential for them and is only being
carried up there out of respect for our hobby. They don't have to run it at all if they choose not too. I am sure the batteries on Mir are not
operating at 100 percent and since the loss of the Spectre modual, they lost many solar cells used to recharge them. When the batteries begin to run low on voltage, they will have to
shut off non-essential equipment until they recharge to the normal capacity.
You can bet this will happen on ISS too, if power becomes an issue ham radio will be the
first thing to go. It is sad that Mir will come down soon, but soon we will have a great replacement.

thinking along those lines i wonder if MIR would last long enough during
burn-up on re-entry to get 1 picture of the interior out on sstv ?.

that would be a coup eh !

probably happen way to fast for that i would imagine :-(

eerrhem, i have :-) 200,000 miles and still going strong !! (well except
for that collision last year...solar panel ...oops i mean insurance salesman
at a roundabout :-)

>When it comes to age and failing components, power useage becomes a top
>priority up there.

tell me about it...25 mpg , anything above 70 and she starts to break up.
:-(..... (and no it is not a trabansk)

> Ham radio will be the first thing turned off, it is NOT essential for them
and

634. RS12/13 Status

Newsgroup: rec.radio.amateur.space
Date: 1999-03-08 00:00:00 UTC
From: treynolds@my-dejanews.com
Message-ID: <7c0u6d$9lm$1@nnrp1.dejanews.com>
Source record: 13450

I see that RS-12/13 passes are now in the late evening around midnight PST. In a few weeks the passes will be in the mid evening. Can anyone tell me the current status. Last I heard RS13 was in mode A and RS12 in mode K. Is that still the status?

(Yes, I know I can check AMSAT but they are not always up to date. And yes, I know I can listen to the beacon but I don't want to stay up until midnight).

Thanks and 73,
Tom

* AMSAT-NA ANNUAL MEETING CALL FOR PAPERS *
===
The 17th AMSAT-NA Annual Meeting and Space Symposium will be held October
8-11, 1999 at the Hanalei Hotel in San Diego, California, USA. This is the
first call to authors who wish to present papers at the Symposium and that
will be printed in the proceedings. The Subject matter of the papers should
be topics of interest to the amateur radio satellite service. Key dates in
calling for and submitting papers are:

One page abstracts are due no later than May 1, 1999.

Authors will be advised by e-mail or postal mail shortly after June 1, 1999
regarding whether their paper has been accepted.

Camera ready copy of accepted papers is due no later than August 1, 1999.
Papers will only be superficially edited and will be printed generally as
submitted. Authors are requested to provide an electronic copy of their
presentations preferably in any version of Word or WordPerfect in the event
corrections are required at the last minute.

Please send abstracts to Duane Naugle, KO6BT via email at: ko6bt@amsat.org
or via postal service at:

Duane Naugle, KO6BT
4111 Nemaha Dr.
San Diego, CA, USA 92117-4522

Receipt of submissions will be confirmed.

Proceedings of the Symposium will be printed by the ARRL and made available at and after the meeting. Also, if you do not wish to present a paper, but have a topic of interest, please submit the topic and perhaps arrangements can be made for a presentation.

Information regarding San Diego area attractions and details on arrangements for the 17th Space Symposium and AMSAT-NA Annual Meeting may soon be found on the web at:

http://www.amsat.org/

For additional information on this press release contact: Duane Naugle, KO6BT via email at ko6bt@amsat.org

[Info via Duane Naugle, KO6BT]

* NEW SATELLITE PROPOSAL *
==========
The Colorado Space Grant Consortium is proposing the launch and operation of a small satellite called Citizen Explorer for use in educational activities. They are informing the community of the plans for the satellite and soliciting comments. They have begun the frequency coordination process through AMSAT and are posting this for wider community response.

The Consortium's proposed frequencies are...

Uplink : 145.860 MHz
Downlink : 436.750 MHz

The Consortium's web site is:

http://citizen-explorer.colorado.edu/

[Info via Stephen Horan, Ph.D, AC5RI]

* SUNSAT NEWS *
==========
The SUNSAT satellite continues to perform well in space. Engineering tests are currently taking place on the satellite. SUNSAT is not expected to be available for general use until at least the end of March when these tests are complete.

Daily updates on SUNSAT are available at the following URL:

http://sunsat.ee.sun.ac.za/

* NO NEWS LAST WEEK *

Need a reasonably exact location at a specific address? Try giving that address to:

http://www.etakguide.com/#FindLocation

Then set the "Long/Lat" button and click on where the 'balloon' points. That should be almost as good as a GPS reading, and is certainly close enough for amateur purposes! 73's and good luck,

Source record: 13457

I would like to build or buy surplus, a satellite transponder to
backpack up an 11,000 ft. mountain!
How do they maintain gain in the front end of their uplink, if the
bandwidth is so wide to accomodate all those signals?
Are they sacrificing gain for bandwidth?
Is there technical info on the subject?
I receive no funds for my club (antenna restricted hams) so it will be a
while before I take this on, and will have to set up scheds, including
registering the beacon with fcc.
Has anyone ever heard of anyone doing this?
I've heard of many baloon launches carrying satellite transonders,
including cameras,.... where can I find surplus equipment?
It must weigh under 10 pounds, including the battery, and should put out
at least 10 or 20 watts, ...ghz up mhz down, best?

Please do NOT post to rec.radio.space about policy matters...
Secondly....there are people who have brain disorders who cannot learn
code...this is a disability that they cannot help. Also, there are people who
could care less about HF and would rather tinker with microwave, high speed
digital, moonbounce, and satellites.

Anyway..my two cents..
73,

Hey Mr Save CW, can you please post the thermal conductivity dynamics for the valence layer in a copper electron like I had to learn when attending college for Electrical Engineering. If you cant, then maybe your license should be forced to expire.

Learning CW has more to do with desire than it does with laziness.

649. Yaesu G5400B

Newsgroup: rec.radio.amateur.space
Date: 1999-03-10 00:00:00 UTC
From: Thierry Guichon <tguichon@ix.netcom.com>
Message-ID: <7c78o0$in4@dfw-ixnews6.ix.netcom.com>
Source record: 13465

What exactly is needed to control a G5400B from a computer. Do I need to buy the interface from Yaesu? Is there a cheaper way ?

Thanks

Thierry AA6UF

I see peoples point on this issue, However in Canada you can work 6M and up
with a basic licence, for what I do with HAM, I have NO NEED for code. I
have no interest in it, and have no plans to learn it any time soon.

Why learn something I will NEVER use anyways? No point. I've worked the
Shuttle and Mir, without knowing a single letter or Morse.

Does that make me any less of a HAM??? Don't think so.

Just my opinion.

Paul Heaney

Well, I am a staunch CW-ist. I don't even own a microphone. But there are hams who just don't want to make the effort to learn CW. It is not stupididty... they just don't care about working CW. Let them be. If they are satisfied with the action above 30 MC, I got no problem with any ham who never learns CW, though I might feel a bit sorry for him, missing out on so much REAL radio.

We have had the no-code license for a while now. Sorry to say it, but there is no turning back. Everything is getting easier, and will never be permitted to get harder. That is the nature of the beast.

You can't buck this "progress". The dumbing down of radio has solid momentum behind it, and there is not a thing you can do about it, except to welcome the new guys, set a good example, and maybe... just MAYBE you will find at least one new ham up to the challenge of CW. An attitude won't help. Even a CW-curious ham won't come to you for help if he thinks you are an asshole, so try to be a little more tolerant of the Morse-o-phobes. You never know who is watching or listening.

I may as well be the one to break it to you, in case you have not seen the writing on the walls. Within 10 years, 20 years tops, the HF bands will be wide open to no-coders. If the no-code tech license gives your ulcer fits, I hate to think how you're gonna react the first time you hear a brand new ham with a brand new fone-only rig complete with voice keyer with a roger beep calling CQ on 14010. CW-ists seem to be the minority now, so it is only a matter of time. Like the man says, "You may as well lay back and enjoy it."

I learned the code and have my general now for 2 years if i dont
upgrade then am I stupid or lazy ?
I dont even use the code It is Crazy to suggest the nocode license
expire non renewable. Some people are happy with there no code license
and I am glad they are, I dont upgrade because I am happy where I am.
If it was not for the ARRL ? back to cb that is all we would have.
Do the no code people bother you that much?
I bet You dont even own a mic, All that cw has madde you a little
buggy.
How about have all license expire after two years non renewable then
it would not bother people as much.
-.-. .-- ... ..- -.-. -.- ...
Next time give your call so we will know who to avoid.
If people dont want to use a 9600 bps modem does that mean thery are
lazy or stupid People need to keep up with tecknology
Sorry for mis spelled words I am stupid and lazy.

Source record: 13474

I found a used AEA ST-1, nice little unit! I noticed that it did no contain an EPROM so this means that you should be able easily build one. The 5400B outputs a voltage relative to the rotors position, one for each rotor. A control box would have to accept this voltage, level convert and perform an Analog to Digital conversion. Now, if you get the schematics of an ST-1 you could build one to suit your needs:) By needs I mean the ST-1 also connects your computer for radio control and allows you to connect another type of rotor to it. You do not need all of this functionality if you have the 5400B. Nova still supports this rotor control. Also I think that it is compatable with the KC tracker software. All software uses a calibration routine to match the controller to the software. So all you have to do is build a unit that outputs the digital signal directly proportional to the analog one.

I have thought about using my sound card to perform the A/D conversion. Then all I would need is a simple device to convert a voltage to a a frequcncy I could hear. This is a simple VCO! Software to analyse the sound spectrum is all over the WEB so all I would have to do is create an application to do only what I need. I went for the hardware because I had the money and no time to experiment with the sound card or build the hardware.

I think I have my schematic, I have to look.

Very good point Paul. I 100% agree with you. No interest in code at all, and why still keep the demand for code on HF?, the commerical ship and air have cloced it down now, so the point of HAM be abel to take a code SOS call is dead.

I suppose one way it is different is that Dick isn't demanding that he
be made an engineer without meeting the existing qualifications or that
the qualifications for becoming an engineer be lowered to accomodate
him. Most guys bitching about morse testing for HF all want to operate
on HF.

Come to think of it, that is a huge difference.

I see, Dave, that you have not comprehended the difference between
"qualifications" and "requirements" yet. Better get back to
meditating on those differences. You will never be a mature human
being until you comprehend the difference between Mother Nature
and Bill Clinton.

I'm selling my Ten Tec 2510 Mode B Satellite Station.

Its in good/fine condx. I have original box, & manual.

This is the transverter you use with a 10M RCVR for downlink. Its got 10w uplink on 70cm.

Ideal for low budget Mode B Oscar station - And the upcomeing Phase 3D satellite.

It should be worth at least $300. Please make offer - tnx 73 de Jim

You seem to be missing a fine point there, Oscar.

How many medical students are lobbying the AMA to make the testing
to be a doctor easier ? None ? Is there a web page for No-Internship
International ?

How many concert musicians are lobbying to make the testing to be
a concert musician easier ? None ?

How many Harvard students are marching in front of Harvard to make
testing for MBA's easier ? None ?

How many no code techs and no ticket wannabe's are whinning,
hoping and praying the testing requirements become easier ? None ?

See the difference ?

And finally, how many of you bozos over there in POLICY realize you
are crossposting this bullshit to the SPACE newsgroup ? Give your
fellow amateurs a break, if we want to read the same old sorry
arguments that were being made five years ago, we'll come over there
and read them. You don't need to crosspost them over here for our
reading enjoyment.

If you can't figure out how to work newsreader software, God help
you if you ever take the top off a 1500 watt amplifier......

This is typical of the many support morse people. They are very very similar to the group that wants all hams to be able to build and operate a spark coil transmitter.

Morse code is dead . Period . Fact.

Just as the the natives who waited on the shores of American as the Europeans developed the farms , the land and the economy.The save code people are hoping some one will get rid of all those wagon trains that keep coming.

I know thousands of very intelligent engineers, computer hobbyists, sailors, and others , ". Who hate morse code " and would be a life saving force to the dying hobby of ham radio.
These people work on for example , on sail boats and spend lots of money.
One fellow is in charge of building and designing a HDTV system for the tv station he works for. He owns a boat and has no time for code but loves ham radio.
Wake up before history rolls over you

P.S.
I can send and receive codeat 15 wpm (coded groups) if you think I am lazy.

I've now successfully worked mir via packet... Have my trusty message number and will be sending off the QSL card & info soon.

I'm planning on trying to recv some slow scan this weekend.

But I'd really like to also see if I could work them via voice sometime before mirex doesn't exist any longer.

I realize that there is not set answer to the question of "When do the astronauts/cosmonauts aboard mir work voice?". And that it depends on their schedule and what they feel like doing in their spare time.

So maybe the real question I should be asking is:

When are you most likely to hear them working voice?

I would appreciate any info people could send my way in this regard. Please don't bother converting to UTC if you know in EST CST, MST, or PST, as I'll just have to convert it back so I can figure it out.

Thanks.

How many horses do you meet up with on the road? I do dislike inappropriate comparisons.

The question is not one of making it licensing easier, but relevant. I am for more stringent technology side testing, actually show a working understanding of what you are operating. That in itself would probably spurn more CW use than the hazing requirements.

The one thing I have noticed about learning to copy Morse Code is that you try to make it a reflex action, i.e. turn your brain off.

Christopher Cox

CW should be just one section of the testing not a full requirment. That is if you got most of the rest of the exam correct you could pass if you failed on the code section. Every thing else is this way. Why should CW cause you to fail? I think station operation is more important than CW.

I think this debate rests clearly on ones desire to pursue and advance through the license classes to eventually utilize the bands that a particular license class allows. If an individual (like myself) has no desire to enter into the H.F. arena, then why should that individual be looked at as a "lesser" individual.

I applaud those who painstakingly worked their way up the license ladder to acquire skills that benefit them in pursuit of their hobby. However, what Ive found after re-entering this hobby after a long hiatus is that there is a level of animosity prevalent today, with regards to individuals who possess lower class licenses, that wasn't as present just 10 years ago. This opinion could be solely mine, however, it seems that 10 or so years ago more upper class license holders embraced lower class license holders in order to create the motivation for the "apprentice" amateur to pursue a higher class license.

What Im now reading on this NG is that some individuals feel that they should either belittle, embarrass or bully lower class licensees into acquiring more skills (e.g. CW). I truly believe the *motivational approach* (show them the benefits of what they can have and how they can use it) rather than the *hostile approach* (belittle them into either getting out of the hobby or going out and 'learn code like the rest of us"), is clearly the path to longevity of the hobby.

Ah, you're not there yet. When you get to where you begin
to hear short words, you turn your brain back on, open up
the mental bandpass and start listening for complete
words....you might be surprised how soon you're hearing
conversations without writing down a single character, at
speeds you'd never have expected.

While you are busy "pounding at the key", I'm out helping people put up antennas, up towers to install antennas, assist in times of disaster, donating to area repeaters, operating in packet mode (which kills cw by far), attending club meetings, attending theory classes, and of course, talking on the rig. So, why am I lazy, just because I don't see the need for cw or want to learn it?. I'm in the hobby for advancing my technical expertise and public service. The whole CW argument is crazy. Let's see if we can get the FCC to make learning how to operate in packet mode a requirement for getting a license. Since most hams use computers and computers are running everything anyways, make it a new requirement. For those of you whole love CW, my respect goes to you. I have a good friend who I have had the privilege to see operate in CW, and I was mystified and I will probably learn it so that I can upgrade. I'm not trying to slam CW, just don't enjoy being called lazy.

Morse code is no more dead than bicycle riding is dead. Just because bicycles are no longer used for serious transportation doesn't mean bicycles are dead. Bicycles and bicycle shops are alive and well because bicycles are fun for some people.

CW is alive and well because CW is fun for some people. CW may become even more popular after the Morse code requirement is lifted. The code-testing agenda will become the code-promotion agenda and those hams will realize, as some already have, that honey works better than vinegar.

>When are you most likely to hear them working voice?

That's an easy question to answer - when the footprint of the satellite has my house in it. But since I'm not sure if you live down the street from me, I don't know if you'll be able to hear them at the same time I do.

>I would appreciate any info people could send my way in this regard.
>Please don't bother converting to UTC if you know in EST CST, MST, or PST,
>as I'll just have to convert it back so I can figure it out.

Since we don't know where you are, it's difficult, at best, to figure out when you can hear MIR irregardless of what time zone you are in.

Since MIR is moving, in orbit, and the earth is rotating, it is only visible at certain times of the day/night at your house so it won't do you any good to listen when the satellite is not visible. Each satellite makes what we call a 'footprint' which is basically a circle on the earth that includes the places on the earth that are 'visible' to the satellite. You have to be inside MIR's footprint if you want to talk to MIR.

There is a bunch of computer software available with which you can plug in the KEPS for MIR and then print or display a list of passes and times that the satellite is visible in your area. If you are interested in hearing satellites, tracking software is one of the first things you need to get.

Try this web page for a few you can download:

http://www.amsat.org/amsat/ftpsoft.html

And for some other information you may be interest in, try

http://www.amsat.org/

There have been Amateur Radio Operators since before there ever was an FCC. Hams pioneered the technology of radio broadcasting. The purpose has never been hobby oriented, though many seem to thing that's the only thing it's intended for. I agree that the ARRL's proposals to lower or eliminate CW requirements is bringing in a lower class of people to our ranks. This, however, seems to be the only way to build the necessary lobbying power to save our frequency allocations which are aggressively being sought after by other interests.

I also had trouble learning the code but once mastered, it became my preferred mode. I persevered and succeeded in the end and I don't begrudge the code requirement. The demand is steep but the reward is greater.

Look guys, you/we are all responding to a set of guys who use nothing but aliases and crosspost to every newsgroup with the words amateur.radio in it. All is does is stir the pot and further divide our already dwindling number. This would be interesting reading (ammo) for someone interested in acquiring/lobbing for Amateur Radio Frequency Allotments.

Rules of thumb.

If the poster uses an alias......don't respond....
If the post is crosslinked to a bunch of groups......don't respond....

Shoot an arrow in the air, where it falls I don't care. Explain that one to the judge...

You are responsible for where your posts go.. Not me, not your ISP but you.
When one replies to a post (or posts) if they are using any kind of decent software
(Netscape, Agent, trn) you will have TOTAL control over where you post. Just like I have control over the messages I filter out. Type. Click. No more messages.

You would'nt tell the FCC that the reason you splattered over 30kc of the band and had harmonics up to 150 mc was because you didn't know how to set up your rig would you?

Ignorance is no excuse...Learning is a responsibility...

At first it seemed that r.r.a.s was a group of hams who could help new comers to the hobby with solutions. However, I now see that this news group has become off topic. This, to the point of ignoring requests for help. By todays count, so far, the posts on policy out number posts on ham radio 14:1.

Keep squabbling guys, with your unwillingness to help new blood trying to come in to this hobby, it will not be long before you hear guys in Bass boats talking about rods, lures, and where the fish are biting on HF. As I heard on 5000 khz last weekend.

10-4 Good Buddies I'm gone.

There should be no such thing as nocode ham ticket as well as no CB we
wouldn't have the problems with all the pirates trashing 10 meters if it
wasn't for CB. I do beleive that the code sould stay where it is and all
the no code guys be give 90 days to get there code speed up to 5 wpm and
1 year to get it up past 12 wpm. Thats just my opinion I could be wrong.

Funny thing is I've filtered all the flame wars, and it seems pretty quiet here. I think people stop reading when the cross-posted junk comes on. I also read the mailing list via the ftp site, and that sounds a better. (Btw, all the Mime messages look weird when your read them from an ftp site -- even though I am using, pause for dramatic effect, Windows.)

Why do you consistently blame "dummies" for the no-code test? WE did not
come up with it!! You need to direct your hostilities toward the F.C.C. and
the A.R.R.L. We were simply told that "code was no longer required." So we
took the test and passed. Now we are one of you! The bands are there for
public use. If they remain unused, they will eventually be "sold" to some
cellular or S.M.R. company. So wake-up and smell the coffee! There is
definatly a "place" for C.W. in the hobby. But don't chastise people for
taking advantage of the "relaxed" rules. Maybe us "dummies" simply don't
want to learn code!! And you can ALWAYS turn your repeaters off! 'Nuff
said. 73's

I think you are being deluded into believing that what happens here on
this USENET is what also happens in the real amateur radio world. I see
none of what you mention in the real world, only here on the newsgroups.
If you believe all you read on here, they will have you believe either
the sky is falling , or will be turning a weird shade of pink next week.
Or that Y2K is a new strain of flu. Or that repeated use of morse causes
certain brain damage. MK

Odd. I've never heard of a Morse code certificate. Morse
code is one of the required skill sets required of those
obtaining most ham radio operators licenses. That's what I
was referring to. People who are motivated to become
licensed amateur radio operators and who wish to operate
widely on HF learn Morse code and whatever else is required
to obtain the license. Motivation-spurred by desire, *IS*
the keyword to success. If you "don't want to" - well, you
just "don't want to".

Today? Actually, that's true. No desire at all. No need for
one these days. And should I decide to, I'd have to go about
a hundred miles to find a school.
You might say I'm not motivated. "I just don't want to".

I use Free Agent and when I go to post a reply comment it
shows ALL the newsgroups that the reply will go to. When
I am just reading any one newsgroup I don't see the other
newsgroups that may have been in the distribution. IF
I notice other newsgroup I usually try to delete them
as inappropriate.

What is interesting, Rob, is that Len Winkler, host of the "Ham Radio and More" radio show, suggested on his show and on this newsgroup years ago that a slow-code general license be created such that if a tech+ could pass the general, advanced, and extra written exams, he would be awarded a 5wpm general class license. I supported it but the PCTA rejected it. Now under the proposed ARRL plan, generals will not be tested to anywhere near the technical level that was rejected by the PCTA previously. Poetic Justice?

721. what receiver for APT and SSTV reception?

Newsgroup: rec.radio.amateur.space
Date: 1999-03-13 00:00:00 UTC
From: jshaffer@mail.csrlink.net
Message-ID: <36ebf053.263139904@news.csrlink.net>
Source record: 13353

I've been decoding WEFAX on HF with my computer for a few years. I've been thinking of buying a new VHF/UHF scanner lately, and I wanted to look into the possibility of receiving APT from polar-orbiting weather satellites and SSTV from Mir. I found that APT reception required a wider band than most FM scanners provide, and most people use custom-built satellite receivers. Are there any reasonably-priced wideband-FM scanners? I've seen specs for desktop models that have very wide reception, but I'd like something a little smaller if possible (plus the bandwidth is usually a lot wider than necessary). Also, I cannot find the necessary bandwidth for SSTV on VHF listed anywhere. What receivers are people using for it?

I use an Icom PCR1000 for both. Perfect bandwidth. I also have a dedicated
WXSAT receiver, the Hamtronics R139, but I don't use it nearly as much as
the PCR1000 which is totally PC controlled and the size of a paperback.
Don't confuse it with the newer cheaper PCR100, I am not sure about it's
bandwidth selections or quality.
You can see examples of my images from the ICOM on my weather page

Nonsense, Gene. The only bands in danger can already be accessed
with a no-code license. One could go so far as to say that the
no-code V/UHF license has failed it's intended purpose.

Lowering or eliminating code for HF privileges won't save UHF and above.

Please abide by the followup line so as to remove this thread from .space.

Hi Lawrence,

check out http://www.amsat.org/

It has a wealth of information in regards to amateur satellites.

The all-mode xcr that's all the rage right now is the FT-847 by Yaesu.
Doesnt do up to 23cm but I'm pretty sure that can be covered with a
transverter of some sort. Regarding trackers, antennas, and additional
hardware, you dont need much just to get your "foot-in-the-door". But, If
your willing to spend the Big-Bucks there is plenty of gear out there for
the amateur satellite buff.

ICOM and Yaesu both offer VHF/UHF xcr's for satellite work.
KLM, Cushcraft, M2, etc offer numerous antennas.
I'm not too familiar with tracking software(but Kansas City Tracker comes to
mind).
Numerous companies offer preamps for antennas.. Hamtronics, SSB, Mirage..
Yaesu has a az/el rotor combo just for this type of use..

I'm pretty sure there are others in the group that could add ALOT more!!

Really? It would be interesting to re-read the (pre-rrap) comments filed
with the no-code Technician NPRM. I'll bet you would find belittlement,
falling skies, and certain brain damage. I was even told that code is a
filter to keep out the "riff-raff." 73, Brian/N0iMD

Hello Mark,

I dont know where you are located, but if you listen to 1.25, 2, 10, and 12 meters up here in New England, what you'll find are the same exact sentiments as those posted on this NG. I personally know a Tech who just recently threw his newly acquired license in a woodstove because he, originally coming from the CB hobby, made the mistake one night of asking an advanced class license holder what his "20" was. Several individuals (friends of the advanced amateur including the advanced amateur) then decided to pounce on him belittle him on the radio. These events took place during a "Net" of which one doesn't have to guess how embarrassing this was. After spending a few weeks looking for another frequency to modulate on, and not being able to fine any locals, he gave up.....

I truly hope this exact sentiment is not prevalent where you are located.

Yeah, well I had a QSO with a Extra who hooked a HTX202 to 120 feet of wire via 80 feet of RJ58. He had a "1 to 1 match" and was located in Cleveland (250 miles away) so his antenna just had to be working. Never mind he was on the wide area repeater (good thing the HTX figured out the offsets for him) which had a receive site no more than a mile away from his QTH. That RG58 can make a great dummy load.

Yeah, that extra 15 WPM really taught him well.

It works both ways. Has nothing to do with the code.

Lets drop this ridiculous thread.

Christopher Cox
KC8FRJ

BTW, yes he burned up his batteries because he had to be in high power to hit the link.

You must have your extra class license, otherwise why would you be so condescending. CW is not the hobby! I feel the more hams the better! I like the fact that CW is a barrier that separates privileges but it does not have to be the only way we separate privileges. We need to get more people into the hobby. How do we do that, by taking privileges away? I think we need to let more people enter so that we get more utilization of the bands. ARRL is not screwing the hobby, I believe they are saving it. When was the last time you lobbied congress so that you could keep the existing frequency allocations? The FCC would like nothing more than to auction off another block of spectrum. We need to be strong, unified and consistent in our approach, the ARRL is our voice(your voice to). I would rather have 100 new hams enter the hobby than keep one CW operator who can send and receive CW at 20wpm with a straight key. So let them in, you could teach them CW and they could teach you how to spell.

There's a pretty good chance that I and many other "CW
heads" were doing digital communications when you and most
of your buddies were in diapers, or even before. You might
attempt to show some sign of intelligence before you head
off to prove you don't have any.

744. License restructuring

Newsgroup: rec.radio.amateur.space
Date: 1999-03-14 00:00:00 UTC
From: glueck@saturn.caps.maine.edu
Message-ID: <7cgnm6$12ci$3@sol.caps.maine.edu>
Source record: 13360

When will the new license restructuring take place? Despite the "hardliners" bellyaches, this move is the only thing that will bring new blood into amateur radio, and save our hobby from the disease of "chat rooms" on the Internet.

Without disparaging the code, like it or not, technology has caught up with Ham radio, and we need to be gracious enough to recognize it, and get on with our lives. Restructuring code requirements is long overdue.

best gueses are saying saying the FCC is likely out out
something in the July to Sept time frame with the effective data being
from either jan 2000 to jan 2001, but the FCC alone may know this (and
even they may not knnow exactly when they will decide)

Alexander,

Try this site:

http://ecco.bsee.swin.edu.au/chronos/metsat/spacetrk.html

The maths gets very heavy but there are Fortran listings for each part of the calculations. I doubt Fortran is the language you use but at least it's easy to read. In their words "Spacetrack Report Number 3 from NORAD is a vital exposition of the mathematics behind satellite orbital prediction and the application of Keplerian elements. For example, most amateur satellite tracking programs use one or more of the models described in this report or simplified variants of these."

I'm not the best expert on this but as I understand the Mars Global Surveyor experiment was a one time thing, while the spacecraft was still reasonably close to earth. Monitoring the Global Surveyor now that it is in orbit around Mars is beyond the capabilities of most amateurs.

I think the same is true for the other deep space mission, Cassini, Galileo, etc.I do know that hams regularly monitor the Lunar Prospector, it being much closer to earth.

Try this web site for some expert information: www.nitehawk.com/rasmit/.

Horizon elevation is the angle above horizontal you have to use
to get a look at clear sky, IE above ground clutter out to the
horizon. If you're blessed with a nice hilltop location, it could
be zero (or even slightly negative), but for some of us it might
run 10 degrees in at least one direction. (For a few, it might be
worse than that.)

Source record: 13378

John - why not use STSPlus? Ok, it's not exactly what you've asked for - but it's in the right direction - sort of.

An edit of the STSPLUS file STSPLUS.FRQ will let you plug in any freq you want for any satellite you have keps for. All you need is the NORAD number and a text editor.

MIR is 16609 - looking at the file STSPLUS.FRQ, find the listings for 16609 and add the freq wanted or change one that's there already - I added in 145.9850 up and down. I'm not too sure what the 1 or -1 mean - but so far it's worked for me!

Here's my section for MIR:

16609,435.7500,437.9500,1
16609,145.2000,145.8000,1
16609,143.6250,143.6250,1
16609,145.9850,145.9850,1

Now - start STSPLUS - as you're selecting your satellite, you'll have the chance to select which freq you're interested in thats associated with that satellite. Then use 'O' for the orthographic view and if the UPLINK/DOWNLINK area isn't showing in the lower right, use F8 to bring it up. There's your doppler.

Kinda 'round about - and it's not using the data from TRAKSTAR, but at least it'll give you a current doppler shift.

Good luck and enjoy!

Peter,
If you are not using AO-10 I would say to delete that satellite
I have not worked AO-10 in over three years so I am kinda basing my info on
very old news.
reasons:
Even tho AO-10 can be worked it is brain dead so there is NO ground control
over that satellite.
my last understanding was the beacon might be on or it might be off
depending on the mood of the satellite :-)
so why look for something that you might never hear :-(
AO-10 was a great bird and still might be.. if you have the ability then I
say go for using and hearing it. but goto www.amsat.org and readup on the
low power condition and FM'img and when to stop using the bird when those
condition start to happen

too bad ao-13 did not live longer :-(

on last idea is to go to the following
and use their online traking software
good luck

10:49 AM ET 03/16/99Financial Squeeze Cuts Mir Program

Financial Squeeze Cuts Mir Program

MOSCOW (AP) _ The crew aboard Russia's orbiting Mir space station will have to cancel at least two spacewalks because of the country's financial problems, an official said Tuesday.
Mir's Russian commander, Viktor Afanasyev, and French astronaut Jean-Pierre Heignere still plan to complete two other spacewalks to install and retrieve scientific equipment, deputy mission commander Viktor Blagov told the ITAR-Tass news agency.
The canceled spacewalks are the latest blow to Russia's cash-strapped space agency, which might have to abandon the station as early as August because there isn't enough money to keep running it. If so, the present crew, which also includes cosmonaut Sergei Avdeyev, may be the last to man the 13-year-old station.
More than 100 people have visited the Mir in 27 missions.
Russian Prime Minister Yevgeny Primakov said last month that Mir could stay in orbit for three more years if private investors are found to pay its $250 million operating expenses. But no one has yet offered the money.
The U.S. space agency wants the Russians to abandon the Mir so Moscow can spend its limited resources on building the new International Space Station, a huge project involving 16 countries, led by the United States and Russia.
If no money is found for the Mir, Mission Control in Moscow is expected to send it crashing into the ocean several days after the crew leaves.

Saw an artical on converting a BC145 Uniden to a wide band. Simple, all you do is bypass the 455KC IF filter with a .01 mf capacitor. This widens it out to about 50kc or so if I remember correctly. Just about what you need to match the bandwidth and allow for the doppler shift sot the sats around 136 Mhz.

Ya know.... I'm a super nice guy, what I said was said 'tongue in cheek' and was not meant to offend you. Now, since I have obviously offended you, I may as well speak my mind. It seems, as if, you are constantly griping about Mir not doing this or Mir not doing that. The other day, you griped about the CW controversy that so many amateur radio operators are involved. I have asked you several times if you are a ham and, if so, what is your callsign, but have never received an answer, so I guess you aren't, as those of us with a call are proud to display them. I doubt you belong to any organiztion which supports amateur space activities and that is your your option, but I just don't see why you have to gripe about something that you don't actively support other than downloading SSTV images from Mir. there are many of us that also enjoy the packet activities, along with the SSTV from Mir. Get licensed and use the PMS, don't whine when there's no SSTV. You have a nice web page with some nice pics and this could be considered a service to amateurs, but you should seek a license and expand your capabilities to further aid the cause, rather than just griping about it all the time. I found it funny to see that you got in on the CW debate in a limited fashion. I will not air my thoughts on the subject in this forum, but how can you complain about CW and HF priveleges, when you aren't even actively involved in the hobby. It's like people who gripe about politicians, but never went to the polls to vote. So, Ian, just chill out, you'll get your card. The French AMSAT folks are not an unreputable group of people, it jut takes time because it's a volunteer effort. The same as the SSTV on Mir, the Space Station is not up there to provide us with either mode, but it is a extreme privelege which we 'mere' earthlings are afforded by both hams here on earth such as the MIREX and SAREX groups and by the cosmonauts and astronauts aboard the Station which take time out of their busy schedules so those of us on earth can expand our horizons and in some small manner help promote the amateur radio service with others, such as the thousands of childen at school who have been introduced to ham radio and space by being able to talk to a astronaut/cosmonaut while they are in orbit.

Source record: 13393

Heard what certainly sounded like SSTV on FO-20 at approx 21.57 UTC on 17/3/99

It sounded a faster mode than the Robot36 which I used the other night to send a picture to the US and it wouldn't resolve in that mode. I only heard it the once so didn't get a chance to try other modes.

Did anyone else manage to capture a picture or know which mode is being used?

Provisionally:- Tony, AB2CJ, will be sending Robot36 via FO-20 on a suitable trans-Atlantic pass on Sunday night (night here in the UK anyway). Probable downlink 435.880 MHz USB +/- QRM and doppler shift. Tony has been experimenting with this in America and along with Mike, N1JEZ, received my picture on 16/3/99.

Jeff, It is a long post but i wanted to put this thread right the following are just my thoughts read them fully before hitting me :-)

----------Jeff said----------
>Ya know.... I'm a super nice guy, what I said was said 'tongue in cheek' and
>was not meant to offend you.

I hope so, then please use those annoying little smileys or something similar as I DID, then there is no confusion. (this is why I prefer radio/life to internet :-)

--------jeff said----------
>I might as well speak my mind. It seems, as if, you are constantly griping about Mir not doing this or Mir not doing that.

probably about half a dozen in the last several months not excessive i think ?.
I only complain in so much as I think there should have been perhaps a bit more of a working out of schedule before the unit was sent up there (sstv). but if I recall there was a mistake made or a problem with something to do with antenna ports or similar ?. It is a shame that both systems cannot be used at the same time but none the less a schedule even in the most basic form would help a hell of a lot for ALL concerened surely ?.and lets be honest if nobody ever complained about anything how would anything ever get put right or improved ?.

It is very frustrating as I have often invited people around to sit up until horrible hours in the morning to show them this great hobby only to get disgruntled as they are not tx'ing again when they were expected to be, and these are ordinary folk who I am trying to get into the hobby and I am sitting there telling them how wonderful it all is only to get the ear when for the fourth time nothing has happened, it does not make for good promotion of the hobby. And before you say it, yes i do explain to them why it does not always work time/techinical/avaliablility etc. but it is still very dissapointing none the less.

I do respect and I am grateful for the fact that the hobby is allowed up there , and the effort that goes into it by all. The small handful of gripes over the last several months were made by me at some unearthly time of the morning after sitting up yet again expecting sstv or packet (whatever was supposed to be "scheduled") and not hearing anything or the opposite of what was expected. As you say, it was said "tounge in cheek". albeit with a hint of arggghhh !.

------------jeff said---------------
The other day, you griped about the CW
>controversy that so many amateur radio operators are involved.

Which does not belong in here (amatuer space) really does it, that is what i was griping about I was asking them to take it elswhere. Funny though my letter about this subject (partly) got the letter of the month recently in a HAM magazine, which reminds me I must send of for the Guide to packet radio book with my book token i got for it (he,he)

-----------------jeff said-----------------------
>have never received an answer, so I guess you aren't, as those of us with a
>call are proud to display them. I doubt you belong to any organiztion which
>supports amateur space activities and that is your your option, but I just
>don't see why you have to gripe about something that you don't actively

>licensed and use the PMS, don't whine when there's no SSTV.

No I am not yet a licensed Ham for two reasons, one I have been happy monitoring for years and did not feel the need to talk to people who seem to talk about nothing else other than what their signal strength is to talk about(God when you think of what else in life their is to talk about what a waste of a wonderful medium is radio ?(yes that was tounge in cheek jeff) and yes I know that not ALL hams are that boring it just seems that way :-) .

Two, I am in a rural location and there is sod all here for this. A few of us (some that I have got into the hobby) are setting up along with a licensed Ham from 60 miles away the ability to do this shortly in a college 20 miles from here, I have however been into radio of some form or another for 21 years (in various ways, mostly monitoring). I do not have much funds whatsoever after a spine injury left me with no income but none the less a good 40 to 60% of what little i have goes into the hobby and showing others about it (especially MIR and space activities). I also have two very young children that I would dearly love to get into it !.

I have got my application forms from Amsat a little while back but unfortunately I cannot budget much for them, although this is soon to change and I will look forward to sending them off along with generous donation (that I can afford). Amsat has been around a long time and as far as I can see they have done a lot for my main area of interest , space/ham hence why I will be happy to be a "paying" member. I just wish I could have been doing it earlier.
(It's amazing what them guys can do with a few hundred dollars of "stuff" that commercial people can't get right for a few million :-) !!.)

-------------Jeff said ----------------------------
>web page with some nice pics and this could be considered a service to
>amateurs, but you should seek a license and expand your capabilities to
>further aid the cause, rather than just griping about it all the time.

I used to have a some what more comprehensive site but the phone bills got to big (we dont all get free local rate calls you know) read below for answer to the rest.

>found it funny to see that you got in on the CW debate in a limited fashion.
>I will not air my thoughts on the subject in this forum, but how can you >complain about CW and HF priveleges, when you aren't even actively involved>in the hobby.

I am VERY involved in the hobby, how many new people has the average license holder got into the hobby or got them involved in space-ham in some way, in the last month, I have got another 6 people to join my rural list of license wanters and active MIR monitors and this is increasing. This may not seem a lot to some but I AM very rural and a toaster around here is considered high tech, recently I have got a man who has difficulty in reading and writing into doing his OWN computer based , radio, wxsat'ing etc and belive me trying to convince some rural people of benefits in doing ham/computing etc is not always that easy especially when they have only been into electric tin openers for a matter of months (and that is not a slur on rural people , it's just that they hav never heard of this sort of thing before).

I'm all alone here aaarrrgggghhhhhhh !

It's like people who gripe about politicians, but never went>to the polls to vote.

You do not want to go there !, I vote always and there are not many police or local Gov officials that do not know my name (and i dont mean bacuase of criminal activities either) . Not to mention many other interests of mine that I often get into trouble over because I do not like bent politicians useless policeman or overpaid and incompetent civil servants Ham/space is not my only hobby but thats another story and a long one :-).

So quite contrary to your view of me I am most certainely not somebody who just sits there moaning and does nothing, I am usually the one accusing others of that !

----------jeff said----------
So, Ian, just chill out, you'll get your card. The
>French AMSAT folks are not an unreputable group of people, it just takes time>because it's a volunteer effort.

As I said earlier i appreciate that , I know I will get the card I am just over-anxious as it will be my first space related one !.and yes I too will proudly display it in my room as you will Jeff. In fact I previously sent an E-mail to those involved in rs-18 (sp41) telling them how i got an article into our newspaper about it and said what a great acheivement it was considering the output power/size etc the signals were EXCELLENT !. better than MIR on occasion (weird stuff radio eh ?). I am looking forward to their other projects with anticipation !.

The same as the SSTV on Mir, the Space
>Station is not up there to provide us with either mode, but it is a extreme
>privelege which we 'mere' earthlings are afforded by both hams here on
earth.....

As for "extreme" privelage I wonder if this is justified, I tend to think
that this way of thought went out with the "right stuff" etc. In my opinion
this way of thinking is what keeps the average person thinking that space is
still a thing for geeks or science boffs and a bunch of elite and also
leaves them feeling that space and their place within it is as far away as
it ever has been?.

This is a Tax payer funded machine not a private one therefore giving the
ordinary person more "right" to expect something that they can be involved
in to be on it, secondly the space "industry" needs the support of people
like the Ham community (even if in a small way) to help promote space and
to help the "interactive" aspect of it with the average person, have you
seen the hammering that the ISS budget as been getting over the years and
still is more than ever or the negative press about MIR ?. So therefore I
see the space/ham thing as a mutual reward as opposed to something to which
is a sort of elite "we must beg" thing (I am speaking about
shuttle/mir/iss and not refering to private launches of rockets that Amsat
etc get a lift on.)

Lets face it, we as hobbyists get a part of our hobby in space and
interactivity with space matters, and the space industry gets promotion and
good coverage with school kids (which is vital if space is ever to work in
the future) and also a means for the average joe in the street to get
involved with it all then surely they is a mutual thing ?. I dunno perhaps i
just see things differently ?.

But even with that said how long will it be before the internet kills that
off too, just log on and talk to an astroaught or digitally download
constant 24hr pics from the space station?, lets face it we are all
responsible for the "quick fix" generation that is now growing around us ,
why get a license, why spend all that money and time on ham equip and
learning ?, mobile phones, internet high speed data links, digital this that
and the other you can get in the high street..... who needs Ham other than
us lot? . no more space/ham in the future ...god I hope not what a shallow
world it would become, life just won't be fun without having to "work" for
at least some of it ?.

Anyway Jeff you seem like a reasonable guy and I don't want to fall out with
you over a trivial posting as we do have our hobby in common at least. I do
so hate the Net in so much that it is too easy to mis-interperate each other
as the majority of us are not master dimplomats or proffessors in the
English language (least of all me), and a lot of us become people we are
really not on it.

so if you would like to debate a few points that I have made here maybe we
should conference instead in the near future (i have netmeeting, cuseeme and
vidcall32). Voice or "human" contact is ALWAYS better than text like this,
Hmmmmmm perhaps thats why i prefer SSTV and voice to packet ?.

Anyway I hope that I have put myself right on the above and I look forward to talking with you again.

Ian Koenig.

Okay.... I feel better having vented as I'm sure you do :) <---smiley. Ian, I encourage you to do whatever it takes to get your license. We do talk about more than just trivial things. You'll meet some of the greatest people in the world, many of which will go out of their way to aid you in your quest. I love working Mir and I hate to think that it's going to probably go away soon. It seems like an old friend. I work Mir on a regular basis, although I have not been able to do so as much as I like to recently due to job demands. Check out http://www.tigertronics.com/sheriff.htm for a article that Tigertronics had about me on their main web page for a few months. It's since been moved to their customer reviews section, but it's got a couple of pictures of me and my minature packet station that I use for working Mir when mobile from my police car.

Anyways.... I extend my hand for a 'cyberhandshake', but still encourage you to get that license, it will double or even triple your enjoyment of the hobby. I work AO-27 daily and each time it thrills me to work a bird going almost 17,000 miles per hour that's about 400 miles up with just a 5 watt dualband HT. Seriously, if it's a money thing.... I'll gladly donate $10USD towards your cause. I'm not close enough to you to help in the elmering process, but would be happy to make a donation or to send you any literature or books which you may need.

hi guys there was a posting on here about a speradsheet for
calculating doppler shift in excel. The SETI League has one for
download at this URL
http://seti1.setileague.org/software/spreadsh.htm

or if you can't reach that URL I have it on my FTP Site at
ftp://ftp.mallard.net/doppler/spreadsh.zip
This zip file has all the SETI excel spreadsheets in it file size
about 72K

Hope this helps

The local radio mag had an article in it a few months ago about the
new APT frequencies AND modes that these birds are supposed to be changing
to, hence new decoding software and interfaces will be needed. If you want
more info on this i can TRY and find it for you.
As far as i know, the standard FM scanner will suffice for FM SSTV.

If you have an HF rig then you can decode SSTV off that on:
3.699 MHz at night and 14.230 MHz every arvo. (Australian times).

I have used a "stock"(no antenna preamp) Tandy Pro2004 with "useable"
results by using the WFM. Yes it is way to wide, but it was a start.
Then I added a JFET 137.5MHz preamp and the results were inpressive.
Then I rebuilt and wireless microphone receiver first for use as an
outboard [kind of a Q5er] if/detector strip. Right BW and all. Then
I redid the RF front end and for both NOAA birds. Worked good.
Then I borrowed a friends iCOM PCR1000.
It is much better than any of the equipment that I used before.
Not only does it have a 50KHz filter and a discriminator out, it
covers the HF SW frequencies so I can pull in NAM etc. On the same
radio (different antenna though). And the same software. [WXSat by
Christian Bock great software!]
Got my PCR1000 last night, added the DSP module [which does not help
APT reception but is wonderfull for "voice" stuff].
Now if the buggy iCOM software only allowed you to toggle a bit on the
printer port to switch antennas, it would be (nearly) perfect.
There is very good after market free/share/buy-ware software for the
1000.

Yes, if you can find it I'd like to read it.

But surely you don't mean that the EXISTING satellites are going to be changed?
Or did they plan ahead for it?

Your post intreged me so I found these comments @:

http://www.fas.org/irp/mystery/pde.htm

<snip>
"Observations of distinctive exhaust contrails that have been
associated in some reports with pulsed detonation engines date back to
1989:<11>

"Described as "cotton balls strung on heavy yarn" by D.C. Card, a
mechanical engineer who saw it forming at high altitude over Denver in
1989, this
distinctive contrail matches exhaust patterns that could be
expected from a pulse detonation engine. At its high altitude, the
unknown dark-grey aircraft
was barely visible in late- afternoon sunlight."

By the middle of 1992, it was reported that:<12>

"Donuts-on-a-rope contrails produced by an unknown high-speed,
high-altitude aircraft have been reported throughout the U.S. and
Europe,
suggesting that the classified "pulser" is no longer confined to
a test range... In late January, a similar contrail -- described as a
"coiled spring" -- was
seen over Scotland behind a very fast aircraft flying east to
west. The distinctive contrails have been spotted during daylight
hours over Portland, Ore.;
Washington Dulles International Airport, Va.; Denver, Colo.; and
Edwards AFB, Calif."

In addition, "observers" have claimed that they have heard various
distinctive noises emanating from the California sky.<13>

"Observers...tell of a swift, high-altitude light that
accompanies the pulsing noise....the light moved from horizon to
horizon -- well over 100 miles -- in

under a minute."

One observer described the noise as a:<14>

"... very, very low rumble, like air rushing through a big
tube.""

I would like to be able to remotely control in azimuth and elevation a 48 "
parabolic dish. Any suggestion on how such a mount could be built ?

Thank you

Thierry

Take a look at Amsat's web site. There is source code for different programs that you can download from http://www.amsat.org/amsat/ftpsoft.html#src. Plan 13 by James Miller is a good one for learning how a tracking program works.

Also visit Ken Ernandes' web site at http://www.mindspring.com/~n2wwd/ and TS Kelso at http://celestrak.com/index.html. There are introductory articles at http://celestrak.com/columns/index.html. And be sure to read "Spacetrack Report Number 3: Models for Propagation of NORAD Element Sets" available at:http://celestrak.com/NORAD/documentation/spacetrk.pdf

Hope that helps

Hello,

I'm a radio talk show host in Montreal. I recently did a live radio interview with Alan Bean, the fourth man to set foot on the moon. He is also the co-author and artist of a great huge coffee table type book called "Apollo."

You can hear the entire interview in a RealAudio version of it on my web site. Feel free to check it out. The URL is:

www.pubnix.net/~peterh

All you have to do is just click on the audio clip heading at the top and it will take you to the page with all the interviews.

Feel free to check out the interview and any others that interest you. Also feel free to tell others.

I watched a Documentary on something that sounds very close to this, a few months ago. Supposedly it was some top secret, new aircraft they were working on in Nevada, in the Area 51 test facility, the project was nicknamed "Aurora" and it's contrails showed to be similar, rumours had it, that it was something new being developed by Lockheed's "Skunk Works"

Paul.

APT requires a bandwidth of approximately 50 Khz. Any more and the signal to noise ratio will degrade. Any less and you will clip off signal information and the image will loose resolution. There really is no substitute for a real VHF wxsat receiver.

Go to

http://members.aol.com/jkktl/ham.htm

for all the wxsat info you need.

>
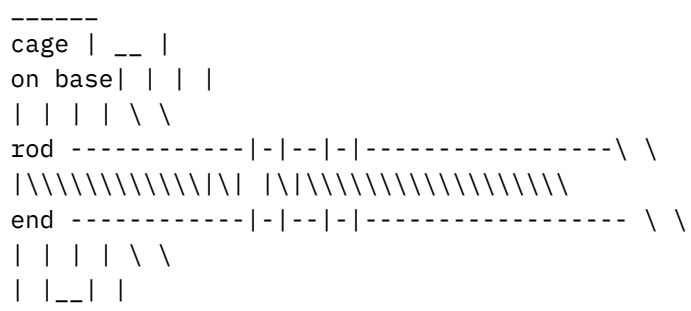
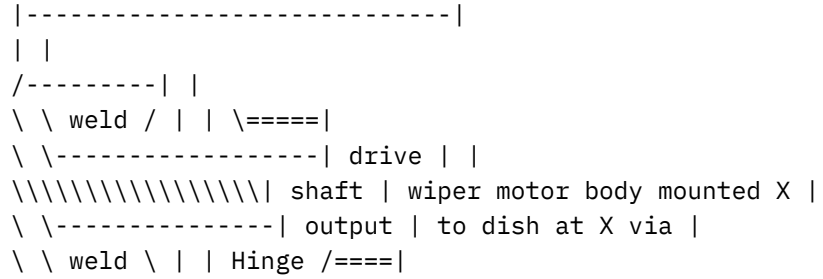
>Thierry
>
>
While there are commercial products to do this, it is fairly easy to
fabricate one for yourself.
Here is the method I used...

2M dish intended for use on a flat roof, with fixed tripod base.
as the dish had limited El available using a long threadded rod and nuts
and bolt adjustment I replaced the threadded rod with a longer rod and
captivated a nut in a cage connected to the base, at the dish end I had
a wiper moter to turn the rod, this was hinged at the connection with
the dish.



the nut is welded to the cage to prevent it turning...



the Az bearing was a lorry Wheel Hub, mounted in the ground, the wheel nuts held a platform made from a flywheel, suitably drilled for the wheel nuts, and the tripod mount was bolted to the flywheel too. this was turned using the gear on the flywheel engaged with a modified starter motor. El angle was measured with a pot and pendulum mounted on the dish, the Az was measured using 2 opto couplers in x4 mode interupted by the flywheel teeth, into an up/down counter driving an R2R d/a to the meter.
I'll leave you to think about the braking on the Az platform. ;-).. think solonoid and jam bar, the hub brake was'nt good enough in high winds and unfortunate angles of dish. ;-(

total cost ... excluding time, about 20 pounds UK. and all parts from your local car breakers..and your junk box..

I hope this helps you.. good luck.. Mike W G8NXD

I use a modified Radio Shack Pro-43 scanner (455 kHz filter replaced
with a .01 uF capacitor). With a home-made quadrifilar helix antenna
and a home-made BF961 preamp it works fine. In true glutton for
punishment fashion I even wrote my own decoding software. See:

http://www.qsl.net/va3ldh/wxsat.html

for a couple of sample pictures.

QSL manager MIR
22, rue Bansac
63000 CLERMONT FERRAND
France

[Info via Bernard, F6BVP, President AMSAT-France]

* SEDSAT NEWS *
===============
Dennis Wingo has been working with the SEDSAT numbers that Mr. John Simon
has been providing the SEDSAT team, and some interesting facts have come
to light. The satellite is power positive right now with a max solar
array power, averaged over all faces of 24.7 watts. This is over the
theoretical maximum. How is this so? Well, in looking at the power
numbers since launch it seems that when the satellite is in its
most favorable day/night geometry like now, there is a significant
contribution (2-5 watts) from the Earth's albedo. This was not
predicted and is a welcome help to the power budget.

The satellite has been active for over four months now! The stated
minimum design life of SEDSAT that we wanted was six months. It is just
too bad the problems with the receivers or we would have such a beautiful
bird. However, the engineering telemetry from the satellite is verifying
our design choices way back in the beginning of the design. The temperature

deltas are all less than five degrees C per orbit and only about 10C per min/max sun cycle. This is a wonderful thing in that wide temperature variations are one of the primary reasons for on orbit failures of satellite systems.

Also, Dennis thinks that he has finally figured out that the -X and -Y facets are reversed in the telemetry transmissions. The currents, when averaged over long periods, confirm closely to the measured flash data that Ted Edge did for the SEDSAT team at the NASA MSFC SunSpot chamber.

Dennis feels that we can claim now at least partial victory for the SEDSAT satellite. Most of the engineering goals have been met. It is just a total shame that the imaging system has not been able to fulfill its mission due to the probable loss of both receivers. However, Chris Bond and company have set up the UAH ground station finally and maybe with the reset box controllers can figure out if either one of them are functional at all.

* PICOSATELLITE PROJECT *
========================
Hank Heidt, N4AFL, reports that a one pound (4 inch x 3 inch x 1 inch) Amateur Radio Picosatellite is under construction by a team in the Washington DC area for Stanford University's OPAL launch in September 1999. Designers need to deliver the flight ready picosat by April 1 so they are under a very tight schedule, but hope to get everything integrated and tested in time.

The picosatellite will be called "Stensat", and is intended for use by amateur radio operators world wide and will operate as a single channel Mode "J" FM voice repeater. The earth-to-space uplink frequency will be 145.840 MHz and the space-to-earth downlink will be 436.625 MHz.

Stensat will periodically transmit 1200 baud AX.25 for broadcasting the following telemetry: temperature, bus current, bus voltage, receiver RSSI and 3 digital "0/1" sun sensors. Additionally, amateur radio operators will be able to "PING" the satellite causing the satellite to broadcast a telemetry packet by transmitting a six digit DTMF command to the receiver uplink.

Web pages describing the project may be found at the following URLs:

http://www.erols.com/hheidt

http://ssdl.stanford.edu/opal/index.html

Hank asks that if anyone has any spare space rated black and/or white paint to please contact him at: hheidt@erols.com.

[Info via Hank Heidt, N4AFL]

* FUJI-OSCAR-29 NEWS *
======================
The JARL FO-29 command station has announced the current status and new operation sked of FO-29.

On March 17th, the two bits errors had detected in the satellite's OBC (on board computer). As a result, software reloading will be required. Digitalker operation that was originally scheduled for March 19th will be re-scheduled after March 20th.

The new operating schedule for FO-29 is as follows:

1999-Mar-23 (Tue) 0400 UTC -to- 1999-Apr-05 : Mode JA

[Info via Kazu Sakamoto, JJ1WTK]

* MIR PMS NEWS *
==========
Recent problems with the TNC onboard Mir were repaired last week by MIREX President Dr. Dave Larsen, N6CO. Dave thanks Scott, WA6LIE of MIREX for helping out with this work. Dave reminds those using the Mir PMS to please restrain from accessing the PMS if it is in use by another groundstation, do not digipeat through the TNC when a groundstation is connected to the PMS, and to lastly, have fun. :-)

* AMSAT-FRANCE NEWS *
==========
Press Release 99-03

AMSAT-Russia, with the help of SCSC (Space Flight Control Centre) in Moscow has contacted AMSAT-France in December 98 for the design and manufacture of RF module and electronic PCBs similar to the ones used on board the RS-17 and RS-18 satellites. AMSAT-Russia was in charge of building the satellite frame, integrating the VHF and electronic modules into the frame and choosing and implementing the messages to be sent by the satellite.

AMSAT-France has delivered the electronic modules on time (February 99) with a preliminary version of software. All the AMSAT-France work has been completed in less than 7 weeks. The final version of the software has been sent via an express delivery company, but it has been frozen by the Russian customs. Because of the planning, AMSAT-Russia did not use the final version of software delivered by AMSAT-France.

The character of this project did not allow AMSAT-France to implement its educational project. AMSAT-France has been deeply involved in the RS-17 and RS-18 projects, including technical support and flight model manufacture. With the help of French schools and universities, AMSAT-France is now developing the MAELLE amateur satellite project.

[Info via Bernard, F6BVP]

* OSCAR-11 REPORT *
==========
OSCAR-11 celebrated its 15th Birthday on 01-March. The satellite was designed, built, tested, and successfully launched by a Delta rocket within a time scale of six months, and with a budget of only 450,000 ukp. To minimize cost, selected commercial grade components were used instead of the more expensive space qualified types.

On the evening of March 1st 1984, G3RWL ran a launch net on eighty meters, which reported the successful deployment of the satellite. Shortly after launch, strong signals were heard on 145.825 MHz as it passed over the UK. Unfortunately next day all contact with the satellite was lost, and it was a further ten weeks before contact was restored, and commissioning could start. Since that time, the satellite has given good service enabling many scientific experiments to be done, and has provided a news bulletin service for Radio Amateurs. A few failures have occurred during the last fifteen years, but then that's a very long time, and the environment of space is very hostile! Congratulations to the UoSAT team on a fine achievement.

During the period 17 February to 16 March 1999 good signals have been received from the 145.826 MHz beacon. The battery voltage has remained fairly fairly constant, averaging 13.8 volts, during afternoon passes, when the satellite has been illuminated for some time.

The internal temperatures have remained fairly constant at are now 5.4C and 3.8C for battery and telemetry electronics respectively.

A single WOD survey dated 06-January-99 of solar array currents and array voltage ie.channels 10, 20, 30, 40 (+Y, -X, +X, V), has been transmitted. The sound of this WOD contains a characteristic musical tone which occurs when the constant data captured during solar eclipses is transmitted.

The Mode-S beacon has been heard by Viktor OE1VKW who reports:

"Heard on Friday March 5 (orbit 80327) and Monday March 8 (orbit # 80371) at elevations greater than 30 degrees (range less than about 1500 km). Maximum signal S 2 to S 3 (range around 700 km).

Equipment: 40 element Yagi, horizontal polarization, SSB UEK 2000 SAT Converter, IC-275." Many thanks for that report, Viktor.

The operating schedule is unchanged.

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

The ASCII bulletin is currently a static message, detailing modes and frequencies of all the amateur radio satellites.

There are additional status blocks after each bulletin is transmitted, and between ASCII TLM and WOD.

The Mode-S beacon is ON, transmitting an unmodulated carrier, but telemetry indicates that it has partially failed, and delivering half power. This beacon is a useful test source for those testing Mode-S converters, prior to the launch of P3-D. It is considerably weaker than DOVE, which should be used for initial testing. Any reports of

reception on 2401 MHz would be most welcome. Please e-mail them to
Clive Wallis, at: g3cwv@amsat.org.

The 435.025 MHz beacon is normally OFF. However, it can sometimes be
heard when the satellite is being commanded by ground control, ie.
within range of Guildford, UK. When the 435 MHz beacon is transmitting,
the 145 MHz beacon is normally OFF. The data transmitted is mainly
binary.

Listeners to OSCAR-11 may be interested in visiting a web site maintained
by Clive Wallis, G3CWV. The site contains details of hardware required
and some software for capturing data, and decoding ASCII telemetry and
WOD. There is an archive of raw data (mainly WOD) for analysis, which
is continually being expanded as new data is captured. Also included
are some audio files, examples of each type of data transmitted by OSCAR-11.
Each one plays for about ten seconds. There are also examples of Mode-S
reception. All the audio files are zipped, so that they can be played
off-line. These should help listeners identify the various types of
data, and give an indication of the signal quality required for
successful decoding.

Message-ID: <922152677.1886081268@news.desupernet.net>
Source record: 13342

Hello,

I am interested in knowing if an eggbeater antenna such as those that M2 makes would be acceptable for downlinks on fo-20 or fo-29? Or even ao-27?
I am considering the 440 version of M2's eggbeater with the extra radial kit for better gain. Would this antenna alone, or with a preamp give acceptable downlinks on these birds? I currently have no az/el rotators or beams. I am somewhat confined to using omnis for now. I am planning to use a simple 1/4 wave ground plane for the uplink for now. any insight would be greatly appreciated.

Thanks

Jerry

6 Month Contract?? No thanks.
"Temp" or "contract" jobs are for suckers.
I've been there and I'd rather swamp toilets then play the
"Oh, just a few more weeks and Human Resources will get to you!
Honest we're going to hire you in just a few more days!" game.

I can't say about your specific company-- maybe you're the
rare exception that is being straight with prospective employees--
but I've seen companies "dangle the carrot" in front people
while treating them like dirt over and over again.
It's counter-productive and it's immoral. And you have
no rights when you're a "contractor." Employers can do
whatever they please to you, no matter how despicable,
and you can do exactly -nothing- about it.

No RF tech worth his soldering iron is going to put up with it
for very long. How long would YOU work with no medical
insurance for you kids, hmmmm??

Good RF techs who know their stuff and will COME TO WORK and
WORK when they get there are getting *really* tough to find.
Yes, companies can get people who know how to change parts
and just "meat-grinder" them-- sure costs alot
to do that and not much gets fixed, but they can do it.

I'm a darn fine RF tech and I've been a manager working
the very best techs walking the planet, IMHO ;-).
I wouldn't take a "contract" position on a bet,
and I don't think any of my people would have either.
Either pony up the money for wages and benies
or go get yourself a 22-year-old tech school grad who comes
to work about 3 days a week, 2 of which he spends on the phone.

Oh come on now...

David Stinson wrote
>
>6 Month Contract?? No thanks.
>"Temp" or "contract" jobs are for suckers.

For a person who has a steady income from an earlier retirement
(I retired at 40), and only wants to work part time in various fields,
it is a good way to stay busy and interested.

>I've been there and I'd rather swamp toilets then play the
>"Oh, just a few more weeks and Human Resources will get to you!
>Honest we're going to hire you in just a few more days!" game.

Just send the resume and the cover letter, and forget about it.
If they call, and you're busy, tell them tough luck. Why worry,
be happy...

>It's counter-productive and it's immoral. And you have
>no rights when you're a "contractor." Employers can do
>whatever they please to you, no matter how despicable,
>and you can do exactly -nothing- about it.

On the other hand, you don't have to put up with all the
company crap. You come in, do the work, go home. No
additional duties.

>No RF tech worth his soldering iron is going to put up with it
>for very long. How long would YOU work with no medical
>insurance for you kids, hmmmm??

What a crock. How do you think people who build homes
all their life get by? They'd love to get a 6 month contract.
One contract leads to another. If not, you go to work at 7-11
until the next one comes up.

>I wouldn't take a "contract" position on a bet,
>and I don't think any of my people would have either.

Who cares.

>Either pony up the money for wages and benies
>or go get yourself a 22-year-old tech school grad who comes

Now wait a minute, Dean. Before you go off the deep end you have to realize a few things here. Paul probably has never heard any UT0 stations on his local VHF repeater, so you have to excuse his ignorance.

With the 400,000 Indonesian, Filipino, Chinese, and South American CB'ers we have on ten meters now, one more 5 watt signal will do permanent damage to the E layer and ten meters will never work again.

And you have to realize that Paul probably was a CB'er before he got his ham license, so it's his job as a duly licensed amateur radio operator to condem anyone associated with 11 meters in order to squelch any thoughts that maybe he used to operate there....

Finally, Dean, you have to realize that Paul doesn't realize that the CB'ers all over the ten meter band are using Kenwood, Icom, and Yaesu radios and 'export models' of good buddy stuff, so few of them are converting anything to become a pain in the neck.

Or maybe Paul is just like he is because somebody backed up over him with a truck.

And to our friend, UT0IY, yes, you can convert old 11 meter radios to ten meters, but how to do it is very dependent on the type of radio. The old one I converted required crystals be changed, some of the new ones don't. Post the model of the radio you have and maybe we can help you find out how to do it....

If you're not in a high RF area and have either short or good quality feedline to your 2M ground plane, do me a favor and try listening for AO-27 on a daylight pass at least 30 degrees in elevation. Yes, that's right, listen with a 2M groundplane for a 70cm signal. The vertical pattern is mediocre for terrestrial use but you might be surprised what you get from space. And if you have a dual-bander, you can transmit, too, (make sure you can at least copy partial callsigns first though) and not need a diplexer. All bets are off in a urbanized, in high RF area, or if there's an ATV transmitter nearby between 431 and 437 MHz.

My employer, Lucent Technologies, is looking for a Senior RF Technican
with the following abilites and experience:

Senior RF Technician Job Description

1. Ability to read schematics.
2. Ability to solder, including small surface mount devices,
and build up RF, analog, and digital circuits in both prototype
and "small lot production" environments.
3. Able to operate various equipment including oscilloscopes,
voltmeters, spectrum analyzers, and RF generators.
4. Familiar with RF design principles and RF test methods for
return loss, transmission loss, output power, matching and RF grounding.
5. Ability to troubleshoot RF circuitry down to the component level.
6. Perform testing of products based upon a starting point provided
by RF engineer.
7. PC competency using word processing and spreadsheets, good
communication and documentation skills required.
8. Responsible for management of engineering lab, including
ordering/stocking of components and lab accessories.
9. Two years minimum previous experience as RF Technician

Location: Allentown, PA

This will *probably* be a 6 month contract position initially, with
renewal or conversion to permanent, direct employment likely
for the right individual.

If you're interested in working with modern digital radio equipment
in a design and development environment, please e-mail me your
resume ASAP. (MS Word or .pdf format preferred, though plain
ASCII, MS Works, or WordPerfect formats cana be handled as well.)

Paul, such a rude response!

But the apology speaks well of your character--most would not have had the courage to type it. Let's see if we can help this guy (or his radio sport club) out in simple English:

Okay Vostok-Radio, the conversion involves changing the reference crystal in the phase-lock-loop (PLL) circuit to the part you are interested in moving to in 10M. In North America, most AM activity is 29.000 to 29.100 MHz, sideband is from 28.300 on up to 28.700 or so. You can also frequency shift the carrier and operate in the FM portion of 10M from 29.400 to 29.700, but this is a slightly harder modification unless you have one of those FM CB radios that are built for overseas markets. A company named Melco used to offer a kit to make an FM conversion of an AM CB radio that was pretty easy to do. After the PLL's xtal is changed the reference voltage must be adjusted. Harder to figure out is the band-pass filter that comes after these oscillators. The new frequency will be attenuated if this is not changed. Usually it involves just changing a simple capacitor or inductor or two.

The hard part to all of this is understanding the theory behind PLL's and in finding a circuit diagram (schematic) since they are not usually published by the manufacturers and there are so many different models that have been sold. There is a CB web page that sells service manuals for CB repairmen that may help. Try

http://www.cbcintl.com

or just keep asking on these newsgroups if you have more specifics of the circuit you are working on. In the 1970's an American magazine called '73' published many articles on CB conversions. I'm afraid that I am not going to be much help. It has been 15 years since I did my last conversion and I cannot even find my notes.

If you are going to operate illegally, be sure to work from 27.5 to 28.3 MHz, always overmodulate, add echo effects if you can, and try to speak a very fast Spanish or Portuguese so that you blend in with the other operators I usually hear there. Just kidding!

Good luck,

-- John (N0BUP)

I have not heard any SSTV for quite a while now, I am listening often to see if they change this. I huess the best time to tell will be this coming weekend when it is normally scheduled to send SSTV...lets hope so it would be nice !

Good grief Paul,
One must assume that there is some history of conflict between the two of
you, for you to start ranting away like this.
What an interesting way you have of conveying the spirit of Amateur Radio.
(sarcasm was never my strong point)

I'm curious to as which CB's would make the best subjects for
conversion. I know that it would be better to get one w/SSB (who does
work w/AM?), but I'm more curious about what models work best. After,
why pay $100-200 for a real 10m radio when, if I spend $20 bucks for an
old cb and do $10 worth of mods, I can have something that does the
trick?

Not to be too simplistic - but - you accept a job in RF engineering. :)

RF engineering is a good field because most students are lured by the
computer world. (Not as many RF people.) Having an amateur license will
help, IF you also know and have been playing around with the circuits. The
hard part is getting started without previous experience. Ham radio can
give you that edge if you've been building your own stuff etc.

Hey, wait a minute! I have held a amateur license for 18+ years and I don't know how to convert a CB to 10M. Actually I have just started using 10M mobile and think it is great fun. I want to put an inexpensive radio in my Jeep and I would appreciate learning the answer to this question.

BTW: He did sign his message with his call, UT0IY.

Yeah, I haven't started looking seriously yet, (I graduate in December)
but most of the ads that I see for engineers either ask for a) 2-5 years
experience or b) 3.5 or better gpa. Now, this may or may not be the
real story, but that's just what I've seen in the quick looks that I've
given the subject.

My senior project is to build an 80m cw transciever; so far, I've been
working on a crystal filter and a dds (w/a pic controller). In the near
future, I'd like to expand my microwaves course a bit and actually try
to communicate across my campus somehow in the 1.2GHz ham band w/some of
the other amateurs on campus. I might even take the spring semester
after I graduate to do some odd jobs on campus so I can bum around and
use the really nice test equipment we have here to experiment some and
further my knowledge of RF. I'm hoping these are good steps in the
right direction.

Hello OM,
I've successfully converted two synthesized CBs to 28 MHz for CW operation. The first radio was converted by removing the 10.240 MHz PLL reference crystal and replacing it with 10.635 MHz crystal I chose that frequency for no other reason than it was the first one to fall out of the junkbox! It was a good choice, for now Channel 1 is at 28.005 MHz.

The second CB was converted only after I had studied how PLL circuits work so as to learn how to re-wire the 8-bit binary-coded decimal (BCD) programming scheme.

I highly recommend the first method!

Keep in mind that if you change the crystal to get the radio up to 29 MHz, the crystal oscillator will need to be aligned, as will the RF stages.

Hope this helps!

Paul,

UT0IY may well be a valid call sign. Looking at the QRZ New DX page at http://www.qrz.com/wrad/directory.cgi?new_dx I find a couple other UT prefixes listed. I also find in the 5th edition of the ARRL Operating Manual (ch. 17, pg. 90) that the prefix UT indicates someplace in the Ukraine, specifically Kiev.

I'm not up on searching for non-US call signs online. I've no way of confirming that UT0IY is valid or not - but it sure looks like it may be, but of what class/type - I don't know.

Now if this poster had indicated he was some yak-jawed 'good buddy' I'd have to totally agree with your suggestion. In this case though, methinks you've keyed up before listening.

Probably too much! I've been learning some stuff though, and I have to ability to check in a few minutes--I have a unix box here in my office, which I can leave logged in, with Netscape running, with the ng's going, so whenever I pop in for a minute, a quick click and I have all the new posts. I can quickly scan (I simply erase all the ones I don't want to read) and then read the ones I want, and then go back to whatever.

I'm starting to catch up, but only after organizing my time a bit and working more. It's always an uphill battle.

Is that why they're being offered "6 month contracts" with no benefits
and the "potential" of being hired full-time at some abstract point in the
future?

When I was in college, it was always a choice between studying and
having sex. Actually, with Texas A&M being an all-male military
college in the 50s, there was no choice. :-)

Didn't sound like an engineering position to me. Sounded like a technician position. Didn't see any requirement for an engineering degree. 'Course, as always, I could be wrong.

But also note that if you change the reference crystal, the spacing will
be different. Also, the CB sets I've seen use the 10.240MHz crystal to
convert the 10.7MHz first IF to the 455KHz second IF. If you move the
reference frequency, depending on the rig you may move the signal out of
the first IF passband.

The CB sets that I've seen block diagrams of use a mixer between the VCO
and the programmable divider. It's there to simplify the calculations
and/or to get the VCo down to a frequency that the programmable
divider can handle.

They use a harmonic of the reference frequency as the second signal to the
mixer. The real change of the CB set's frequency comes from that harmonic,
not the actual reference frequency. The reference frequency is divided
down to 5KHz or so, and to make much difference at that point would
require a very large jump to another frequency for the crystal. However,

the change at the crystal frequency, especially when multiplied something like three times means the VCO has to move up in frequency by that much in order for the signal at the output of the mixer (ie the input to the programmable divider) to be the same as when the reference crystal was unchanged.

In other words, if you move the reference frequency up almost 400KHz, the injection to the mixer is over 1MHz higher so the VCO moves up that much.

The trick in the old magazine articles was to uncover where the reference frequency is multiplied and fed into the mixer between the VCO and the programmable divider, and cut the signal path. Feed a new oscillator into that point.

This moves the VCO (and the rest of the CB set) higher without messing with the channel spacing. It also will not mess with the second conversion osciilator.

Lucent isn't "trolling" ... I thought I might help a
fellow ham find an interesting, exciting job opportunity.

Sheesh ... like Hans said ... you'd complain if you were
hung with a new rope, wouldn't you?

Lucent's HR department IS working the opening. Like I
said, I just thought I'd try to help a fellow ham.

As for your stock portfolio, If you want to sell Lucent
stock, how many shares do you have to sell? I buy the
maximum allowable under the employee stock purchase plan
every month and all of my 401k goes into the stock fund.
(not to mention my options)

Mike ... the "ad" was for a tech, not an engineer ... and
because *good* techs are so hard to find, many companies
hire them through a contract agency for 3-6 months to see
how they work out before converting them to permanent
employees.

It gives BOTH sides a chance to see how things are going
to work out.

Carl,

What's the average starting wage for an RF tech at Lucent? Good techs may be hard to find, but it also seems that the average wage is rather low for a "high tech" position.

I realize that this is partially due to the fact that many techs are non-degreed, having gained their experience at a vo-tech school or through the military.

MultiMode does SSTV (as well as CW, RTTY, FAX, ACARS, and more) on the Mac.
The URL to download a copy is:

. . . . . yo Squiggy-Poo . . .

While I'm unalterably opposed to your position(s) on the ham radio code tests and your techo-weirdo-geek elitist bullshit wrt to what ham radio would be like if you were Emperor I gotta go to bat for you on this one.

Your post was an honest and forthright annoucement of an available slot for some kindred RF-oriented ham to fill at Lucent. Where I come from that was a good deed.

Now lookit all the freaking flame and nit-picking bullshit.

I wouldn't actually wouldn't wish it on anybody, but what these ungrateful dweebs really need is their first pass thru a major economic downturn wherein they have no clue how they are gonna make the next payments on their new SUVs and their outlandish mortgages and forthwith complete their "educations".

It will be interesting to see how they react to posts like yours when that crap goes down . . it's gonna happen, we can put that in the bank right now.

. . from one very senior engineer who has been there to another . . .

Rick ... I'm honestly not sure ... I know that Lucent pays
well, but I did not ask my boss what the range was when I
suggested he allow me to "advertise" the opening to hams here.

If you're interested (assuming the rate is good), please send
me a resume via e-mail and I'll make a point of getting back
to you ASAP.

I have my full Nova for windows and I am now looking for an interface and az/el rotor, the problem is that I think the Yasue rotors are VERY expensive for what is at the end of the day an item that moves an ariel ?. Is there an alternate to this costly item ?. and if so what sort of interface will it work with (kst, sasi etc)

thanks

ian l.

This will keep CBers and other stupid people out of the ham bands and require more studying for a license. If we had had the 90% passing rule a long time ago then we wouldn't have any stupid people on the ARRL board of directors today.

The two year non-renewable no-code license sounds like a great idea too!

Save CW, Tell the ARRL to KISS OFF!

887. The EASIEST sat - FO29 digitalker

Newsgroup: rec.radio.amateur.space
Date: 1999-03-26 00:00:00 UTC
From: "KF4FDJ (Mike in Ft. Myers, FL)" <seven77@gate.net>
Message-ID: <36FBD37E.78EED81D@gate.net>
Source record: 13203

Since the previous posts on working the FO29 digitalker, I have been asked several questions on how to hear the FO-29 digitalker. What follows is sort of an evolving FAQ. Feel free to distribute this document. KF4FDJ - March 26, 1999

Fuji Oscar 29 is a small LEO (Low Earth Orbit), Japanese owned satellite containing a digitalker, mode JA transponder, and 1200 baud packet capabilities. The mode JA transponder requires a SSB uplink signal on 2 meters, and transmits a downlink SSB signal on 70 centimeters. Mode JA is a full duplex mode. You WILL hear your own downlink, in order to compensate for doppler. The satellite is also capable of mode JD, (digital) at 1200 baud.

Q Is Fuji Oscar 29 always in digitalker mode, and what is it?
A The digitalker on FO-29 is a digital loop announcement, which makes the same announcement over and over. You will hear a ylleeeoop (bird sounding signal), followed by "This is JAS two." The Japanese Space Agency, JAS, plans to cycle digitalker, mode JA, and mode JD. Check announcements on the BB for a schedule.

Q Do I need a multimode rig to hear the digitalker?
A Since FO-29 transmits in FM mode while in digitalker, any receiver capable of tuning the 70 cm ham band should be able to detect the signal.

Q Do I have to use a high gain antenna to hear the signal?
A Since the digitalker concentrates the power budget of the satellite to the FM transmitter, instead of spreading it across a mode JA transponder, it is a very strong signal! It is possible to hear the satellite with a handheld scanner or transceiver, and a stock "rubber ducky" antenna. Most 70 cm base stations, or scanner listening posts, with fixed antennas, should also be able to tune the signal.

Q I've heard that a circularly polarized antenna is necessary to hear FO-29. Is this true?
A While a circularly polarized antenna will help on mode JA, it is not necessary with the digitalker. It REALLY is possible to copy the signal with a handheld device and a "rubber duck" antenna. We have been successful with a Yaesu FT50R and a stock antenna. You will need to rotate the rig (and antenna) for the best orientation. Experience shows that horizontal polarization, with the axis of the antenna perpendicular to the satellite gives the best reception. Experiment!

Q Where do I tune to hear the signal?
A The transmit frequency is 435.910. Of course, you will have to compensate for doppler shift. Just remember you will tune a little

higher in frequency as the satellite approaches your position, and a little lower in frequency as it recedes. You will always be tuning higher in frequency when the satellite comes over the horizon. Make sure you have your radio set to tune small increments, as increases and decreases in doppler are gradual, and linear.

Q How long will I be able to hear the satellite on each pass?
A Since FO-29 is a low earth orbit satellite, most passes will be between 6 and 18 minutes in duration. Timing is critical in working any amateur satellite.

Q What is the purpose of the digitalker?
A The digitalker presents an easy opportunity for hams and non hams to have their first taste of real time reception of signals from space. Use this opportunity to show a kid, or a terrestrial ham how easy it can be to tune a satellite. This opportunity is excellent for scout meetings, monthly ham meetings, schools, or any place where inquisitive persons congregate.

Q How will I know when the satellite is over my location?
A You will need to have a program to give you predictions of when the satellite is "visible" to you. An excellent place to find downloadable software for real time tracking of satellites, and other information on the amateur satellite program in general, is: http://amsat.org Be sure to download the latest keplarian coordinates for your tracking program. Each prediction program needs these coordinates to determine where the satellites are, and to help you determine when FO-29 will be over your horizon.

If you have any comments, additions, or modifications to this document, please contact me directly. We will attempt to post the latest version whenever the satellite is toggled to digitalker mode.

73, Mike KF4FDJ

I can understand all responces made to the request unknowingly Paul did not reconize the sorce of the ?,
we do have a problem with the cb's getting used wrong and there is no easy fix. Howevever the mods are easily done by a ham or anybody else that gets the info in the future why not deliver the info to a lic. ham via email and not public display it may only keep one radio from being modified for the wrong reason but it is a start.

So, just because you don't like the cber's in the world, you think we do not have the right to obtain a ham license..... Well, just to piss you off, I want you to know that I am a cber and have been for over 15 years.... I love the CB and it's challange to DX and be heard..... AND I'm currently working on my code to get my ham ticket.... Once I get it, I won't be getting off of the CB just because I have a ham license.... I will probably use it just as often as I do now.... I can almost guarantee you also use the CB.... Otherwise, how would you know that we are stupid? Hmmmm..... Must make you stupid too asshole...

Have a nice day jerkoff...

The arrl needs to dumb down amateur radio because when the good hams cancel their memberships, the league will need Cbers and Lambda queers to beef up membership again. And they can get more money from ham dealers and equipment makers, because slo-codes and cbers are appliance operators.

How much money is the arrl getting from Lambda anyway? I'll vote for the 90% passing score even if it does mean most people at the arrl HQ wouldn't have been able to pass.

We need to do something about the bootlegger cber's slo-codes on 10 meters too.

Hmmm... so even though I have upgraded by learning code (although at the moment it IS slow) I shouldn't be allowed to use 10 meters? Maybe I can be an exception, since I just built a rig and can't be considered a "appliance operator". I believe everyone has the right to their own thoughts and feelings but blanket statements about 'slow coders', such as myself are somewhat demeaning, especially considering the fact I am diligently getting my speed a bit quicker.

73 Jeff W4JEF

Yes.... I know I replied to this in r.r.a.s., I'm sorry..... now can we PLEASE talk some space stuff <grin>?

I dissagree even though I feel ,you are on the right track.Even if the
current tests required 100% to pass they are sooo easy we would still
have a bunch of people who hadn't really invested anything into getting
a license and therefore might not treat their hobby with respect.
I'm for harder tests including the CW tests,any idiot can get to 20WPM
in a few months. AB7RS

Well
I'm a Advanced clas operator and I passed my test with a 97% score. So
There I would stil be ham even if the requirments were rased. How ever I
beleive that such a action would be wrong. Millions of people enjoy
radio, Some like the technical part of it some just like to talk and
some just want to know if they can get a loaf of bread without paying
high phone bills or stopping by a pay phone. All of these types of
communications a perfectly leagal on the ham bands as well as CB. So
what is the differance? I'll tell you the differance the differance is
passing a test. I do beleive that there should be CW in some cases. I
also beleive that the problems of CB radio are of the FCC's own making.
I feel that there should be some kind of agrement to work this out. I
will say this the FCC listen to the ARRL but the ARRL only reperstant
20%ham radio. I also think that the Amateur community should welcome the
CBer with open arms. Allot of us including myself started in the ranks
of CB. I beleive that we should make CB part of the amateur communty.
Make it a nocode beginers type ticket and do away with the 150 mile
range and change the rules with regaurd to amplifiers and bandwidth. "I
Hate CBers" I geuss we can put that statement in a class of biggots, now
isn't that like I hate all niggers? (Sorry I used this for a example)
Thats saying I hate a group of people just becuase of the group. I have
been a ham for over 20 years and a CBer for over 30 years. I will tell
you at least in my area most of the 11-meter guys are much more behaived
then the guys on 75 or 20-meters, as far as consideration. 75% of then
run power though. So I hope you continue to hate CBers as a group and I
will continue being a member of that group then you can hate me too.
With that in mind your will then hate most of your ham radio buddies
because they got their startt in CB. Thats why I say lets anex 11-meters
and the 11-meter operator and make a license to acummadate the CBer. I
have this broken down in a plan see

http://www.dirtball.com/band.html

As far as making the test harder or making the passing requirement tougher I think that this would hurt the Service as a whole. In the USA I have found Safty in numbers. If we were to anex the 11-meter band as well as the operators it would bring new unheard of numbers to the ranks of Ham radio. Also it will assure us that what bands we keep we will keep.
I beleive CB radio is a good thing.

hmmm Are you implying that cb'rs lack intelligence? I beg to differ.. there are many people on this NG that are smart with the rf equipment. I have met quite a few hams that are great guys and are well liked in the ham radio community.. But can also be compared with rocks.. so open your mouth a little wider so your entire foot can fit in..

Why do CBer's insist on breaking regulations, by modifying radio's and using amps? You can't do CW on ten meters anymore without stepping on a CBer. I don't Know why the ARRL wants to give our hf bands away to CBers and no-codes, you're already using them!

Thats true, but it will still take an idiot with ambition and most are lazy
as well as stupid. Still 90% to pass is a good start.

Don't bother, Joe. You're a self-admitted law breaker (see the federal
regs concerning the CB radio service [Part 95] and their prohibition
against working DX). If you can't obey the Part 95 regs, you stand little
chance of a magical conversion in obedience to the Part 97 Amateur regs.
We don't need nor want any more law breakers in the ARS; we've already
got too many as it is. Hopefully the newly revitalized FCC enforcement
branch will shut 'em all down, then begin going after the unlawful CBers.

Excuse me! Since the CB ranks are made up from the general population, where are you gonna get more hams if you exclude people who have owned/operated CB radios?

If you hate CB, don't go there. That's why there are knobs on radios, 10-4?

911. Re: eggbeater for fo-20/fo-29?

Newsgroup: rec.radio.amateur.space

Source record: 13227

Dear Jerry:

I have been using M Squared Eggbeaters for both the uplink and downlinks for quite some time now. I started without the radials, and added them on later with some improvement in performance. Although the performance is not necessary optimum, I get decent performance on FO-20 and FO-29, and feel that this is probably as good as it gets on the LEO's with an omni-directional antenna. I use a Mirage preamp on the downlink (I think this is essential) and a brick amp on the uplink, but don't always need the latter. I am using a Yaesu FT-736R for a transceiver.
As for AO-27, the Eggbeater really doesn't cut the mustard on AO-27. It appears to come down to the issue of polarization. AO-27's downlink is vertically polarized when it just appears over the horizon (the Eggbeaters are horizontally polarized on the horizon), so there is a bad mismatch. Even when it gets high up, I have seldom been able to hear AO-27 very well with my setup. I just got a dual-band HT and an Arrow handheld antenna and do much better with that setup. If you have access to the AMSAT Journal, you may want to read KI0AG's very helpful articles on AO-27 operation with a handheld.
Hope this helps.

It depends on the satellite, more particularly on the ratio of its
mass to its frontal cross-section. In general, 100 km is considered
to be the altitude where reentry occurs. But even at 150 km, most
satellites won't last for very many orbits unless they're reboosted.

I can clearly see by this post that you somehow do not fully comprehend that the end of the 20 th century is at hand. While CW is a nice mode of transmission, it is not the only one. Comparatively it is slower than most other forms. Even hig speed digital is faster than CW. From many of the reports that I have read and heard of say that the avewrage age of ham operators is getting older and the influx of younger operators have dropped mainly due to the internet. Now if you wish to stay with your nearly one century old philosphy then in about 20 years there will be almost no amatuer radio service at all. A band of 200 to 300 thousand operators are not going to have much clout with the FCC or the federal government. Swell the ranks to over 3 to 4 million and we may just get more atentionand maybe even more HF frequency allocations. There is at least three to five MHz of the HF spectrum that can easily be rediverted to amatuer radio service if the numbers were high enough. But I forget, most like you would love to keep the amatuer radio service a good ole boys club of elite and arogant snobs. I realy pity you in your prejudice and narrow minded thinking. You see only that which is front of you. The blinders that you have on for some reason will not let you see the big picture.

One final question. Did you make 90% on all your written exams? I bet I know the answer that you will reply with! Then would you be telling the truth?

Regards
James

MONDAY MARCH 29, 1999

* NEW MINI-SPUTNIK READY FOR LAUNCH *
====================================
Miles Mann, WF1F, reports that a new mini-Sputnik satellite called RS-19 is on its way to Mir with the next Progress launch currently scheduled for April 2, 1999. No word as to the date the satellite will be hand launched from Mir is known at this time.

The latest mini-Sputnik will transmit stored voice messages in many different languages on a frequency of 145.815 MHz (+/- Doppler) with 200 milliwatts of power. Up to ten messages will be transmitted by the tiny, battery powered satellite. Each message will be 7 seconds long and include a 7 second pause. There is the ability to change the message every 24 hours.

More information on this project is available on AMSAT-France's Web page at:

http://www.ccr.jussieu.fr/physio/f6bvp/

[Info via Miles Mann, WF1F]

* FUJI-OSCAR-29 NEWS *
======================
FUJI-OSCAR-29's Digitalker has become quite popular with satellite enthuiasts, especially those with modest receiving equipment. During periods of Digitalker operation, FO-29 can be easily heard with a handheld UHF-FM receiver tuned to 435.910 MHz (+/- Doppler) and whip antenna. Due to the popularity of this recent operation, the JARL has decided to extend the period of FO-29 Digitalker operation through Monday March 29th.

The latest FO-29 operating schedule is as follows:

Mar 29 (Mon) - Apr 5 (Mon) Mode JA
Apr 5 (Mon) - Apr 12 (Tue) Mode JD (1200 baud mode)
Apr 12 (Tue) - Apr 27 (Tue) Mode JA

Apr 27 (Tue) - May 6 (Thu) Digitalker

[Info via Kazu Sakamoto, JJ1WTK]

* CONNECTICUT OPERATION PLANNED *
==========
Bob, WE1U, will be in Connecticut for business on April the 6th. He will be stopping off at ARRL Headquarters in Newington in the morning and will be trying to make satellite contacts.

Here is his tentative schedule:

15:25 to 15:37 UTC : RS-13
16:25 to 16:38 UTC : AO-27
16:38 to 16:48 UTC : FO-29 (possibly, not sure yet)

QSL info is to W1AW, 225 Main St. Newington, CT 06111-1494. Please enclose an SASE if you want a card in return.

Bob will concentrate on AO-27 primarily, with RS-13 and FO-29 on a secondary basis. He will be attempting to give as many stations as possible a QSO with W1AW so his exchange will be your call and a signal report (59 CT)i. Bob asks that bigger stations wait until he has worked as many QRP stations as possible (these would be the folks with an HT and an Arrow antenna). Bob also requests that stations do not ask for his grid location as this will only slow things down. He also apologizes in advance if he considered a "satellite hog" for this scheduled event, ans asks that people who wish to contact him e-mail him in advance so he has an idea of how many stations will be trying to contact him during his stay in Connecticut.

Bob may be reached at: we1u1@banet.net

[Info via Bob WE1U, AMSAT Area Coordinator, ARRL Vermont Section Manager]

* LINUX KCT DRIVER AVAILABLE *
==========
Jean-Paul Roubelat, F6FBB, announced that he recently uploaded the last version of the KCT/T driver for Linux 2.0.36. The KCT/T is a PC-bus, 8 bit ISA board used to drive two antenna rotors for satellite tracking purposes as well as two transceivers for Doppler tracking. The driver is available at:

ftp://ftp.f6fbb.org/pub/f6fbb/distrib/kct

This version now includes a static or shared library to interface the driver.

[Info via John Melton, N6LYT/G0ORX]

* MIR ORBITAL MILESTONE *
==========
Ken, N1WED reports that pending course correction maneuvers, MIR in its current orbit plane, will pass a milestone of seventy-five thousand

(75,000) orbits on or about 1731 UTC April 05, 1999. MIR's Core was launched February 19, 1986 at 2128:23 UTC. The present total weight of the seven modules that make up MIR at the present time is 248,600 pounds or 124.8 Tons (US).

Due the probable deorbit, it will not make the one hundred thousandth (100,000) orbit which would occur around August 12, 2003.

As a comparison, Vanguard 1, that was launched March 17, 1958, as of a few weeks ago has completed just over 36,200 orbits. It is the oldest (unclassified) space object in Earth orbit.

[Info via Ken, N1WED]

* OSCAR-22 CRASH *
==========
Last week the OBC186 flight software on UoSAT-5 (OSCAR-22) crashed. A reload commenced shortly after the crash. The satellite should now be back in operation. Users are cautioned to refrain from transmitting to UO-22 while flight software uploads by command stations are taking place.

KITSAT-OSCAR-23 remains out of service due to what appears to be a failure in on the the spaceraft's storage batteries. The satellite has recently been heard transmitting data at 1200 baud using BPSK modulation as opposed to its regular 9600 baud FSK format.

I take ofdfense to your comments that any idiot can get to 20WPM in a few months! As an amatuer operator for 23 years I am appalled at this attitude. Personally I glad that I have stayed primarily off the HF bands to stay away from high and mighty idiots like you. I renewed my license only because the ARRRL finally had some guts to stand up to those like you that wnat to keep the amatuer radio service a good ole boys club. You do seem to have some knowledge. You can use a computer and gain acess to the internet. Oh by the way, if amatuer radio does not change, the nternet is more likely the death nell of the amatuer radio service. I can hold a comversation on the internet with a person is Japan far more reliable and easier thatn on 20 M. Have you ever thought of that? I guess not. And by the way, I don't have to know 20 WPM morse code. Have you realized that ships over 300 tons no longer are required to have a CW operator on board? Do you realize the FCC does not even five the radiotelegraphers test anymore? SO sometime in the next century, I hope that you find someone to pond the key with at 30 and 35 WPM.

Here are a few more questions that I have yet to heard a convincing argument for having CW as a restriction! Most answers fall into the category of "well I had to and so should you". I really don't thinkl that that is a very convincing argument. I guess your father had to walk 20 miles to take the garbage out and 50 miles to go to the school bus stop in the snow. So you feel obligated to

follow in your fathers step and ignore the advancements of technology. Then again I think you may be afraid of technology advancements?

Why should there be restrictions on frequency and power usage because someone is more or less proficinet in the usages of morse code?

Does CW make a better Ham?

Does high speed CW make one understand Electromagnetics better?

Regards
James

922. EASY SAT! FO29 digitalker (update)

Newsgroup: rec.radio.amateur.space
Date: 1999-03-27 00:00:00 UTC
From: "KF4FDJ (Mike in Ft. Myers, FL)" <seven77@gate.net>
Message-ID: <36FD6FA1.1B3B88A8@gate.net>
Source record: 13238

Since the previous posts on working the FO29 digitalker, I have been asked several questions on how to hear the FO-29 digitalker. What follows is sort of an evolving FAQ. Feel free to distribute this document. KF4FDJ - March 27, 1999

The Japanese satellite, Fuji Oscar 29 (JAS-2), was launched on August 17, 1996, by H-II rocket No.4, along with the earth observation platform satellite ADEOS, from Tanegashima Space Center of NASDA (National Space Development Agency of Japan). FO-29 is a small LEO (Low Earth Orbit), Japanese owned satellite containing a digitalker, mode JA transponder, and 1200/9600 baud packet capabilities. The mode JA transponder requires a SSB, or CW uplink signal on 2 meters, and transmits a downlink SSB/CW signal on 70 centimeters. Mode JA is a full duplex mode. You WILL hear your own downlink, which is crucial, in order to compensate for doppler. The satellite is also capable of mode JD, (digital) at 1200/9600 baud.

Q Is Fuji Oscar 29 always in digitalker mode, and what is it?
A The digitalker on FO-29 is a digital loop announcement, which makes the same announcement over and over. You will hear, "Ho- ho'kke'kyo, this is JAS two." The first part is the song of a bush warbler. JARL (Japanese Amateur Radio League), plans to cycle digitalker, mode JA, and mode JD. The digitalker message content will likely change at the end of April, 1999. Check announcements on the BB for a mode schedule and other details.

Q Do I need a multimode rig to hear the digitalker?
A Since FO-29 transmits in FM mode while in digitalker, any FM or multimode receiver capable of tuning the 70 cm ham band should be able to detect the signal.

Q Do I have to use a high gain antenna to hear the signal?
A Digitalker operation dedicates most of the power budget of the satellite to the FM transmitter, instead of spreading it across a mode JA transponder. It is a very strong signal! It is possible to hear the satellite with a handheld scanner or transceiver, and a stock "rubber ducky" antenna. Most 70 cm base stations, or scanner listening posts, with fixed antennas, should also be able to tune the signal.

Q I've heard that a circularly polarized antenna is necessary to hear FO-29. Is this true?
A While a circularly polarized antenna will help on mode JA, it is not necessary with the digitalker. It REALLY is possible to copy the signal with a handheld device and a "rubber duck" antenna. We have been successful with a Yaesu FT-50R and a stock antenna. You will need to rotate the rig (and antenna) for the best orientation. Experience shows

that horizontal polarization, with the axis of the antenna perpendicular to the satellite gives the best reception. Experiment!

Q Where do I tune to hear the signal?
A The transmit frequency is 435.910. Of course, you will have to compensate for doppler shift. Just remember you will tune a little higher in frequency as the satellite approaches your position, and a little lower in frequency as it recedes. You will always be tuning higher in frequency when the satellite comes over the horizon. Make sure you have your radio set to tune small increments, as increases and decreases in doppler are gradual, and linear.

Q How long will I be able to hear the satellite during each pass?
A Since FO-29 is a low earth orbit satellite, most passes will be between 6 and 18 minutes in duration. Timing is critical in working any amateur satellite.

Q What is the purpose of the digitalker?
A The digitalker presents an easy opportunity for hams and non hams to have their first taste of real time reception of signals from space. Use this opportunity to show a kid, or a terrestrial ham how easy it can be to tune a satellite. This opportunity is excellent for scout meetings, monthly ham meetings, schools, or any place where nquisitive persons congregate.

Q How will I know when the satellite is over my location?
A You will need a program to generate predictions of when the satellite is "visible" to you. An excellent place to find downloadable software for real time tracking of satellites, and other information on the amateur satellite program in general, is:

http://www.amsat.org

Be sure to download the latest keplerian coordinates if you download a tracking program. Each prediction program needs these coordinates to determine where the satellites are, and to help you determine when FO-29 will be over your horizon. Another casual approach, is to use an online prediction site, such as:

http://acsprod1.acs.ncsu.edu/scripts/HamRadio/sattrack

This site will generate pass predictions for a selected satellite.

If you have any comments, additions, or modifications to this document, please contact me directly. We will attempt to post the latest version whenever the satellite is toggled to digitalker mode.

73, Mike KF4FDJ

I think if you check your paperwork, James, you will see that for the last 23 years you have been contractually obligated to stay off the HF bands.....

Those of us who do operate on HF would like to thank you for staying off the HF bands and for following the terms of your agreement with the F.C.C.

Keep up the good work.

924. Join us for the RS-13 pass on Saturday evening at 9:45 PM CST

Newsgroup: rec.radio.amateur.space
Date: 1999-03-27 00:00:00 UTC
From: "Randall R. Wing" <rwing@southwind.net>
Message-ID: <36FD78B4.79664B9A@southwind.net>
Source record: 13240

RS-13 has a pass tonight. If you can broadcast up on 2 meters and listen on 10 meters, then try it tonight. This is the pass information for Wichita, KS. Your time will vary slightly on your US location. The satellite will track over the east coast - so west coast folks will have a much shorter (if any) opening.

29.480 is the middle of the downlink. 29.505 is the beacon. Broadcast on 145.980 simplex USB and listen 5 khz around 29.480 for your own voice. I'll be listening waiting for contacts!

Maybe some no-code people just don't want to use the extra stuff you can
do with a code licenses. Why should they upgrade? If all you are interested
in is fox hunting or VHF/UHF, why upgrade? It's only a hobby, you shouldn't
have to upgrade your license if you don't need to.

While the softwear is not the greatest, it will work , look at the
Amsat.org page under downloads and check out the FODTRAK program.
Think there is also a program that allows this interface to be used
with other programs. The interface can be built for probably under
$ 20.

If you want to do some work, the alliance rotators can be put to use
if you put a couple of pots on the antenna masks. Thease antenna
rotators are almost free for the asking from people that have put in
the cable tv stuff.

I used to be a CB'er. Some of the people I met on CB were very good people. The rest were pure A******S. Most of the good people on CB were amateur radio operators and helped me along in getting my license. Not all CB'ers are bad. Amateur Radio has its share of rotten jerks as well. Take some generals and up for example whose mission in life, apparantely, is to bash no-coders. I am a no-coder, but I am studying my code and theory and I will upgrade to Extra.

I don't talk on CB anymore. Everyone I used to talk to on there has gotten sick and tired of trying to have a decent conversation with the good people who DO EXIST on 11 meters and have left that band all together.

My point is that not all CB'ers are bad, but not hams are good either.

SURE it will. Sounds to me like the same flimsy argument that's used for keeping the code requirement in place; i.e. Morse code is used as a "filter" to keep the "undesirables" out of amateur radio. All one needs to do is listen to 20, 40 or 80 meters to hear what a POOR job the code requirement has done of keeping "stupid people" out of the ham bands.

934. RS-13

Can someone inform me of the RS-13 Mode K (21 MHz) uplink frequencies? I haven't kept up with this and suspect they are different from the RS-12 uplink band.

The RS-13 passes during the recent WPX SSB contest filled the downlink band with SSB stations working the contest!

>-- Any chance of connecting?

To the PMS, yes, but you must wait until you see the disconnect message
before attempting. R0MIR-1 is the PMS callsign.

>-- On all the time or just randomly?

All the time mostly, weekends are supposed to be for SSTV but it's sporadic
lately.

>-- Etiquette?

See above. Wait for a disconnect before attempting a connect. You may leave
the crew a mail message but no one else, have a message pre-made to send.
You may also use unproto mode to make contacts but it is advised not to do it
while someone is connected to the PMS. Which is all the time basically. My
advise is to send short hellos or CQs and do not connect to others via Mir.

945. Mir 440 repeater & 2m simplex

Newsgroup: rec.radio.amateur.space
Date: 1999-03-30 00:00:00 UTC
From: Chad Robertson <robertso@csc.mc.edu>
Message-ID: <7dpei0$u79$1@landrew.mc.edu>
Source record: 13111

I am very new at the satellite stuff. Have only listened to AO-27 a couple of times.

I read that Mir has a 440 repeater on it. Several questions: Is this always working? Daytime only? etc. Also, is it possible to hear it only using a small handheld yagi attached to a HT? And is it possible to get into it with a mere 4w power from the HT?

Also, are there any particular times to listen for voice on the 2m simplex frequency on Mir? Can you work this using a mobile and a mag-mount groundplane?

Any websites with information about Mir or AO-27 are welcome and appreciated.

Thank you for your time and patience.

Welcome to the group!

> I read that Mir has a 440 repeater on it. Several questions: Is this

The 70cm repeater has not worked in a long time. There also hasn't been
voice comms in quite sometime, but (hooray) the latest French astronaut
aboard Mir *has* been active via voice from Mir. The currently active
frequency for Mir is 145.985MHz FM simplex. This frequency is being used for
voice, 1200bps packet and SSTV. It is imperative that you listen before
transmitting and there are also some rules which AMSAT-France is requesting
that one follow when the cosmonaut is doing voice. You can work Mir with a
HT or a simple ground plane antenna. I frequently work Mir packet while
mobile from my patrol car (see http://www.tigertronics.com/sheriff.htm).

The Mir repeater is on and off, mostly off.

Mir very rarely uses voice mode, it all depends on the crew really. Some
like to chat, some don't. The previous crew hardly ever got on. The station
uses mainly packet mode and SSTV from time to time. 145.985

>Any websites with information about Mir or AO-27 are welcome and

I agree any idiot can get 20 WPM. You are an idiot and you got 20 WPM. Why don't we raise the level to 35 WPM and that will keep all assholes like you off the ham bands. Then you can go and kiss somebodys ass to get your 2 watt xmitter on the CB bands. Your cw most likely sounds like your mouth .... shitty. CBers have just as much right to the airwaves as you, you pompous asshole. You must be a twin because no one person could be this stupid.

Looks like the next version of the 1/4 scale model of Sputnik!

I noticed a message on the amsat-bb from Bernard (F6BVP) saying that AMSAT-France built and delivered the rf and electronics modules to the Spaceflight Control Center in Moscow, and they do not want the new satellite to be called RS-19 (as it was expected to be).

Looks like it is being sponsored by Swatch! I wonder if they have a licence?

Last weekend there was a very low pass (374km) and a bunch of us calling
without any response or sign of the station at all.

> advise is to send short hellos or CQs and do not connect to others via Mir.

I guess things differ a bit depending on where you are in the world.
Down here (VK) there aren't a lot of people working MIR, so it is quite common
to digipeat to other amateurs for a brief hello.

With the study material that is available the grade does not matter, anyone that can memorize the book will pass the test. If the enforcement groups do there part the riff raff
will end up in jail and the rest will be afraid to break the rules.

Hi, Name here is John. I looking for a Packet Software Program that can emulate 1200/9600 baud PSK or FSK for working the digital birds. My KAM with ver 8.2 has a dumb modem mode that sends raw data to the RS-232 port. With the right sofeware I think it should work fine. If it does I will upgrade my KPC-9612 so I can also work the 9600 baud digital birds.
Tnx for the help...

Hello
I believe I caught some jet contrails on APT on this morning's NOAA12 pass. I identified them as jet contrails rather than the more common ship contrails because they are visible on the IR image and they lasted just a few minutes and they are very straight. Not visible on the NOAA15 pass a few minutes later. Both images are on my web site at

Security Grounds Student
Satellites

Thursday, 1 April 1999
S T A N F O R D , C A L I F . (AP)

DOCTORAL STUDENT Michael Swartwout had hoped his class project would be orbiting over the Arctic Ocean by now.

Instead, the 2-foot-wide hexagonal satellite is grounded - probably for good - in a dust-free room at Stanford University.

Like other projects built by engineering students around the country, Swartwout's has been kept Earth-bound by a new U.S. policy borne of fears over national security.

"It's a wonderfully simple problem," said Lewis Franklin, a former vice president of TRW Inc., the defense and aerospace equipment maker. "They can't get an affordable launch in the United States. They have a free launch offered in another country.

"But political problems are making it impossible to ship it out."

Now a research fellow at Stanford's Center for International Security and Cooperation, Franklin has served as a volunteer liaison between Stanford's satellite project and potential launchers.

Normally, a private satellite launch in the United States costs about $4.5 million. Students usually don't have to foot the bill - they can launch their projects at a big discount or pro bono by hitching a ride on larger private or public rockets.

The 28-year-old Swartwout and his crew, who began their project in 1994, had just such a plan, with Moscow Bauman State Technical University in Russia offering a free launch for their SAPPHIRE (Stanford Audio Phonic Photographic Infra Red Experiment).

All the students had to do was get their glittering 40-pound gadget over there and connect it to the Russian rocket.

But their plan fell apart last fall when President Clinton signed the 1999 defense bill, which reclassified commercial satellites as "munitions" and turned primary control over exporting them from the Commerce Department to the State Department.

The policy shift was a response to controversy following the 1996 crash of a Chinese rocket carrying a satellite built by Loral Space & Communications. After the crash, U.S. officials worried that sensitive technology may have been made available to the Chinese.

"The whole reason the State Department is handling all satellite export licenses is to protect the national security of the United States," an agency spokesman said. "We're making sure we have a tab on who gets what and that sensitive technology is safeguarded."

The SAPPHIRE, however, is an unlikely threat to national security. Built in an old basement chemistry lab, it has payload that includes a digital camera, a voice synthesizer and a couple of telemetry and autonomy experiments - not the stuff of master spies.

And certainly there are no trade secrets aboard - it's made mostly from material anyone could buy at a Radio Shack.

"We just want to put these nifty things in space," said Robert Twiggs, a visiting professor hired five years ago to jump-start Stanford's small satellite development project. "I'm trying to get the students through the life cycle of one of these projects."

Twiggs said the political wrench thrown in the way may have taught the students a good lesson: Make launch arrangements early. The program's next satellite, the OPAL, is slated to hitch a ride on a U.S. military rocket in September.

Swartwout isn't going to let the problem hold up his life: "At some point I got kind of resigned to this and realized that I better focus on finishing my degree instead of the launch."

Still, there are some advantages to working with a satellite that never leaves campus.

"I guess in a way it's not bad," he said. "If I have a problem I can just walk down and take a look."

Bruce,
You can listen in to retransmissions on some 2m ham radio repeaters and
via shorwave radio. Here's some info for you:

Tom

Space Shuttle Radio Frequency List
Rich Weinkauf, Farmington, MI
01/07/92

A Space Shuttle mission requires the coordination of thousands of
individuals on the planet, and some off. This coordination is directed
largely by radio communications, both voice and digital; and supplies the
communications enthusiast with several opportunities for listening. The
following list includes radio voice communication frequencies reported to be
in use during a typical Space Shuttle mission. This list has been gleaned
from many sources, including personal communications, messages on
Prodigy, Amateur Radio Bulletin Boards, Space and Astronomy Bulletin
Boards, and the NASA Spacelink BBS. All of it is subject to change without
notice, and reception is dependent on your location and the propagation
conditions.

I can be reached for additions, deletions, and corrections to this list via:

K6MF: 7165, 3840

*My own experience with STS-35 during 12/90 here in Southeastern Lower Michigan netted the NASA rebroadcast on 20198 KHz USB for about half the mission. Most other contacts were with WA3NAN on 14295, 7185, and 3860, although QRM on 3860 made the signals difficult to copy by 0000 UTC. W5RRR was regularly heard on 14280 only, but with a strong signal.

Other possible frequencies and locations as posted on the NASA SpaceLink BBS (205/895-0028) follow, with the message author's comments if pertinent:

987. uosat-data (oscar) - RadioRaft 3

Newsgroup: rec.radio.amateur.space
Date: 1999-04-03 00:00:00 UTC
From: Francois Guillet <F6FLT@TheOffice.net>
Message-ID: <7e58rsfkl1@platane.wanadoo.fr>
Source record: 13153

Hi All

The new release of RadioRaft permits to decode 12 ARQ modes,
8 FEC, 3 modes by packets and many others.
It's a DOS program that runs with the Hamcomm interface or a
demodulator.
Among the innovations with regard to version 2, there is the
mode named "UOSAT data" that permits to decode 1200 bauds
ASCII from Oscar. The program handles a real FFSK
demodulation. You can enable or disable the parity check.

RadioRaft is usefull, fast and full automatic: detection of
the speed, mode and shift in less than 15 sec.
Among other innovations:
- 5 other new modes: Acars, Pocsag, Pactor-I, Dup-Arq and
Gmdss-Dsc
- shiftmeter
- FFSK and DFSK demodulation
- many improvements in the quality of the decoding

For all details and downloading:
http://www.TheOffice.net/RadioRaft/

Good decoding.

Source record: 13154

Doug,

The ISS is DEFINITELY visible if you are in the right place and at the
right time. Try out this web site to help you determine when it might
be possible:

http://acsprod1.acs.ncsu.edu/scripts/HamRadio/sattrack

Just remember, these conditions must exist before you can see the ISS:

1) The ISS must be over your horizon, and higher that 10 degrees in
elevation (+/-).
2) The sky must be relatively clear, with stars visible.
3) It should be relatively dark, and somewhat free of ambient light
(find a dark location away from city lights).
4) It must be 60 - 90 (+/-) minutes before/after sunrise/sunset for best
visibility.

The kids and I have been fortunate in that we have been able to see ISS
on a few occasions. Our most consistent sighting however is Hubble,
which is very easy to find and track with the naked eye.

>I can also work the 9600 baud digital birds.

You cant get PSK out of an AFSK TNC no matter what. This does require
hardware, not software.

Maybe you can get a software PSK modem for a PC Soundcard, I'm not sure.
I know that AFSK, 4k8 and 9k6 modems are available for soundcards.

An added complexity may be that you need to use special software for
the satellites and your soft modem has to be compatible with that software.

Jeff WH6U
---

http://wmbc.umbc.edu/rob/swatch-protest/

From Rob Carlson:
Dear editors, Loop readers, list readers, and assorted
amateur friends,

Over the past week I have received an incredible response
to my query in the Hudson Division's Hudson Loop newsletter
about a curious advertisement on the Swatch web-site. To
help advertise their new brand of "Swatch time"
watches, they appeared to be launching a satellite which
would broadcast the voice messages of web readers into space
and back to earth over radio on the frequencies from 145.800
to 146.000 MHz.

Thanks to the excellent researching skills of Stephan
Anderman, K2SMA, and Rick Lindquist, N1RL, I've discovered
that Swatch in cooperation with the Russian space authorities
have decided to use the two meter Amateur band
for direct advertising via the "Beatnik" satellite (a
mini-Sputnik and AMSAT-FR project formerly to be known as
RS-19) across the entire world.

According to AMSAT-France, during the construction of the
satellite, the Russian space center had made a separate
commercial contract with the Swatch watch company to put
its messages on the satellite. This was done in spite of
AMSAT objections and contractual agreements with them not to
put commercial advertising content in the digital messages.
AMSAT-FR couldn't back out of their own contract and had
to forward the parts on to the space center.

Riley Hollingsworth, K4ZDH, is doing his best to crack down
on unlicensed and unbecoming operations within the jurisdiction
of the FCC, but soon an egregious violation of the
non-commercial status of amateur radio will begin taking
place just a few miles above our heads when our two meter
band is filled with advertisements for the latest Swatch
watches.

[snip]

From the SWATCH website:
http://www.swatch.com
We are collecting your written and voice messages (.wav)
format to put them on our Beatnik satellite.

Once in orbit, the satellite will transmit a selection of
them to a worldwide audience (and beyond...) Voice messages
have to be maximum 7" long or 0.08 of a Swatch.
(sorry guys, there's not a lot of room in space...) while
text messages can be up to 130 characters long. You can talk
about anything you want; your mum, your boy/girlfriend, your
latest project, how much you would like to go into space to
discover new, sexy, friendly life forms, as long as the message
contains the word "BEAT" it could be selected. Don't forget,
we don't really know who is going to be listening out there,
so help us give a good impression of the people living on
our blue planet...
Before sending us your messages, take time to check out our
rules and regulations, to make sure that you are on the right
side of interstellar laws.

In the month of April, on a date to be defined that we will
communicate on these pages, a fearless crew of Cosmonauts
will be launching the Swatch .Beatnik loaded with a selection
of your intergalactic messages into orbit from the MIR space
station. The Beatnik will orbit earth and you will be able
to track it around thanks to the pioneering technology of our
website.

Check out this space (no pun intended) for further information
and more space-connected goodies.

The Beatnik will transmit the selected messages in the
following bands:

145.800 to 146.000 MHz

Thus allowing radio-rads worldwide to listen to your voice.
You will be able to catch both voice and text messages (in
the form of HTML pages) ; but hey, if you are not a radio-freak,
you do not have to worry. You will be able to follow the Beatnik
and its messages live right here on the tracking section of
the website.

Yes, it is. Thanks to all who responded to my posting. I have made a
few QSO's through RS-13 Mode K recently!

See you there.

As a mugwump on the subject I say - You can save CW for TRADITION or kiss it
off but you should make more comprehensive theory exams for TECHNOLOGY. I am
an ARRL member. I do not blindly follow all of the ARRL leaders
concepts...but I do know that Hams need the ARRL just as the ARRL needs hams.

I must say that I agree that the above concept of 100% pass would be a step
in the right direction and as such it is not IMHO a bad idea. HOWEVER I do
not believe that it is enough to make future Hams much better qualified than
at present. If we continue to use fixed Q & A exams we will still have
applicants who can score 100% and not have the slightest idea of the meanings
of any of the questions or their answers. We will still have many who
believe that an answer is the correct choice only because it was the correct
answer in the Q & A pool book. Another important point IMHO is that we need
more classes.... that is Ham license classes... so that sequential exams can
be given with time between them for serious progressive study. Communication
technology can not be learned with only four exams or less...I suggest at
least eight. A final point that I must make here is that the content of the
exams and the level of the technology must be brought up to modern standards.
We can not just test for the current ham modes and technologies but should
test for the knowledge that you can expect of a Ham who is prepared to be a
modern day experimenter especially for the highest class Ham tickets. This
means that many of the people who now get involved in generating the Ham
exams may not be qualified themselves and we need to get more up dated people
involved. We need people who are at the level of understand Shannon and
information theory, for example, to write the questions or at least to decide
what types of questions are now important in the real world of electronic
communication. PLEASE keep thinking, I never met a Ham I didn't like, Hams
need more license classes, Bob Wex w2ilp (Idiots Logically Pass?) -- .-

Source record: 13161

Woah, wait a minute! I've looked at the web site. I've thought about the prospects. At best, I can see how you might find it distasteful, from a satellite op/ham operator point of view. However, I see nothing illegal, or for that matter wrong with Swatch sponsoring a satellite.

Think about how much GOOD could come from such an alliance. As long as the rules are followed, I see nothing wrong with commercial money helping to sponsor amateur satellite projects. If Boeing hoists an amateur satellite into orbit, will you boycott them?

Think through this now. How bad could the messages really be? "Launch a satellite, and the entire world will beat a swatch to your door." From what I've read, the only qualifier they have for their messages is it has to have the word "beat" in the message. So? If I'm talking on FO-20, and I use the word Motorola, am I guilty of breaking the rules? I don't think so. I don't think the word "beat" is even a Swatch trademark.

If this process helps introduce young people to the ranks of amateur radio, and amateur satellites, how can you NOT be in favor? Think of the potential. Here is a large multinational company putting out the word, telling the world to seek out radio operators to listen to a message from space! Use the opportunity to take your HT to the mall and gather a small crowd of young people to listen to a signal from space. They'll probably already know about it, and will be thrilled by the opportunity!

The last time FO-29 was in digitalker mode, I introduced several people to the thrill of receiving a signal from space on their own radio. Two are now users of AO-27. After posting a FAQ on this server explaining how to work the digitalker, I received dozens of emails from all over the world. Many were grateful to be handed the tools to have their own space experience. "Easy" experiences like these have a positive impact on our hobby.

Sometimes we ham operators get up in arms over the silliest things. If you send more hate mail to Swatch for the world to see, I guarantee you it will be we satellite operators wearing the black eye. Send letters of encouragement, and reassert our ranks as the innovators we are. Peaceful, kind, supportive words will win more of our sophisticated youth over to our ranks.

My mother used to tell me you catch more flies with honey than you do with vinegar. Please temper your responses and not make fools of the amateur satellite community.

Cliff,

I might well be. What I would hope the amateur community WILL do is temper their responses in a responsible manner, and not create an air of contempt. Our goal should be that through peaceful, intelligent, positive actions, we enlist others to join in our hobby.

I HAVE been looking at the long term; the prospects both thrill and scare me. I see an aging constellation of useful amateur satellites, while the sky fills with commercial hardware. Amateur/commercial alliances, in good taste, COULD begin a renaissance in amateur satellite technology.

As always, humans have selective morality. A few months ago, while SSTV signals were being sent from MIR, and voice contacts were being made on amateur frequencies, which cosmonaut held the Russian amateur ticket? Was the amateur community up in arms? Were rules broken? And here we're squawking about the word "beat" being transmitted on a digitalker.

Cliff, you're not crazy, but try to think through this and see the benefit to the amateur satellite program.

Rob,

As a matter of fact, I have been a large fan of both public radio and public television. You will notice that this partnership has increased the caliber of both entities over the years. What were once basement and local productions have evolved into some of the best, if not the best programming available on the airwaves. What is the tradeoff? At the top of the hour, the underwriting entity (read commercial concern) is allowed a few seconds to "advertise."

Now we have a fairly benevolent corporation, willing to underwrite an amateur satellite. The caveat? The word "beat" will be included in some cosmic chatter from some real kids, real citizens. Harmless, and controlled.

The unit is based on the same bus as the previous mini-sputniks. The voice controller contains static chips. The messages will NOT be dynamically altered every 24 hours as your web site seemed to report. Once the messages are burned into the chips, although capable of being "cycled," are static. New "commercials" will NOT be uploaded to the bird.

Scanning my prediction sheet for the next pass of a usable bird, I have some time to pen this missive. I see a constellation of aging birds, with some literally ready to fall from the sky. I for one would welcome a symbiotic relationship with commercial concerns if it meant putting MORE amateur technology into space. It would have to be done tastefully, carefully, and with approval of the ITU.

Bullying tactics will only serve to alienate any commercial concerns who have ever toyed with the idea of partnering with the amateur community. Let's take a tempered approach in dealing with this issue, and welcome dialogue from the private sector. Metered, sensible dialogue may well pave the way for an entire constellation of amateur satellites, underwritten by corporations, whose PRIMARY mission is an amateur payload.

Knee jerk responses will only sully our reputations further. Open minds will usher the amateur space program into the 21st century.

No, it would probably fall under the heading of 'technically stupid' since this particular satellite doesn't have a receiver on board..... It sure couldn't be considered 'jamming' because none of the potential listeners would hear your signal with your antenna pointed up in the air. If you really wanna jam the Swatch Watch satellite, you'll need to launch your own satellite (don't forget to put the 1500 watt amp on board) in a similar orbit and send your jamming signal down, not up. But hurry, you only have 30 days....

Probably the best path to take would be that of the least resistance - wait 30 days until the Energizer Bunny's batteries go dead and then write it off as another tiny piece of Russian space junk.

Swatch probably won't alienate near as many hams as Amsat did by taking our money for Phase 3D and never launching it.

Swatch can get it up, how about you Amsat ????

Ah the quick buck again, eh?

Ham radio did fine without Swatch for decades Mike!

Sponsorships and "partnering" (i.e. being in bed with) commercial
concerns will NOT benefit amateur radio long-term.

Remember it is AMATEUR radio - not PAID COMMERCIAL radio.

Anyone agree?

Sponsoring???

Next thing you know Burger King will be putting ads on every ham's 75m
SSB transmission, like a roger beep at the end of every transmission!

We have about as much use for your COMMERCIALS ON THE HAM BANDS idea,
as a FISH has use for a BICYCLE!!

Mike, we can soon kiss amateur radio goodbye if you, Swatch and the
Russian Pirates get your way!

After reading all of the information on the Swatch web page I can see no violation of amateur rules. I wish someone would point out specifically what rules they are in violation of since they make no mention of advertizing the Swatch company but rather transmitting messages from readers of thier site. As long as these messages contain no profanity they are no different than any other 3rd party traffic.

Has anyone from the Queen Mary radio club ever described the boat? Since the Queen Mary is a commercial enterprize and they make space available for the radio club they are in essence sponsoring the club, is it in violation for an operator to talk about the ship and how much fun it might be to visit? Thus providing advertizing to a world wide audience over HF.�� This senario exists with many other corporate sponsered clubs, so why is so different for the Swatch Company? Note: Their site makes no mention of Swatch Advertising being transmitted from the satellite.

DUH!!

The following rules are planned to be violated:

No one-way transmissions.

No unlicensed operation.

No commercial advertising in the amateur bands.

Need I go on?

The President of AMSAT-France says you are DEAD WRONG,
so I suggest you go argue with him.

He can give you better answers than I can.

Also, the SPECIFIC RULE NUMBERS that will be violated are posted out
there on web pages I have cited if you want to read them...

I didn't post them. I will tell you who DID: Some of the MANY
THOUSANDS of amateurs who are outraged by this plan to STEAL our
amateur band for commercial purposes!

Deal with it!!

From:

http://perens.com/Articles/Swatch.html

How SWATCH Violates The Law® -

International Radio Regulations
Article 1 - Terms and Definitions
Section 3.34 Amateur Service:
A radiocommunication service for the purpose of self-training,
intercommunication and technical investigations carried out by
amateurs, that is, by duly authorized persons interested in radio
technique solely with a personal aim and without pecuniary interest.

Article 32: Amateur Service and Amateur-Satellite Service
Section I. Amateur Service
(2) It is absolutely forbidden for amateur stations to be used for transmitting international communications on behalf of thrid parties.
(3) The preceding provisions may be modified by special arrangements between the adminstrations of the countries involved.

U.S. Amateur Regulations
(This rule also appears in most nation's individual laws concerning Amateur Radio)
Section 97.113 Prohibited transmissions
97.113 (a) No amateur station shall transmit any communication the purpose of which is to facilitate the business or commercial affairs of any party.....
...
(c) No station shall transmit communications in order to engage in any form of broadcasting...

Would you do business with a corporation that knowingly and outrageous promotes violations of international and national laws?

http://www.hamradio-online.com/1999/apr/swatch2.html
= = =

Also, Tim:

See:
http://wmbc.umbc.edu/rob/swatch-protest/

= = =

If it is such an innocent and LEGAL thing for Swatch to break the International Law, with the help of RUssian Pirates, all of which you defend, then why is the French AMSAT President so concerned about this??

Please answer that after you read this letter:

This is a letter from AMSAT-France President Bernard Pidoux, F6BVP to the other AMSAT organizations detailing the situation with the new satellite.

Letter from Bernard Pidoux regarding Beatnik

Dear AMSAT colleagues,

AMSAT-Russia, with the help of SCSC (Space Flight Control Centre) in Moscow has contacted AMSAT-France in December 1998 for the design and manufacture of an RF module and electronic PCBs similar to the ones used on board RS-17 and RS-18 satellites. By contract we agreed that AMSAT-Russia was in charge of building the satellite frame, integrating the VHF and electronic modules into the frame and choosing and implementing the messages to be sent by the satellite. The contract signed by Vladimir Solovyev (SCSC) and Gerard Auvray F6FAO (AMSAT France) specifically mentionned under paragraph 8.2 that "the

voice messages and HTML pages transmitted by the satellite should comply with the international amateur rules. No direct advertising can be made on the air".

Soon after the contract had been signed, we discovered through the technical discussions we had with SCSC that they had made a separate commercial contract with the Swatch company in Switzerland. This company wanted to call the satellite "Beatnick" and to send voice and HTML messages about Internet Beat time. We said to SCSC that these message contents were not compliant with amateur radio ITU regulations. Oleg Volkov replied that they took all the responsibilities and that we could not cancel the contract with them or they would suit us.

Thus AMSAT-France was obliged to deliver the electronic modules with the software for CPU. The EPROM program comprized test messages and the ESD circuit was filled with pre recorded test voice messages by AMSAT France. Acceptance certificate of the work was signed by SCSC and Gerard Auvray. We received a copy of the voice message recorded by SCSC and we still think that they are not acceptable. The name of the satellite itself, "beatnik", indicates the identity of the sponsor. Some voice messages refers to the BEAT, a registered trade mark by Swatch. Thus we suggest that no AMSAT organization should describe the contents of the message or encourage listening to this non amateur compliant satellite using our amateur band. Furthermore we ask that keplerian elements of this satellite should not be published in the AMSAT keps bulletins. The batteries capacity of the satellite is however limited and the expected lifetime is 30 days.

I would like to tell you that AMSAT France is very sorry for this bad situation and hopes that you will understand that we did not want to achieve this. We had good relationship with the former team under the management of Viktor Kourilov, of the Astronautical Federation of Russia who was responsible of RS-17 and 18 projects and we did not realize the risks of contracting with a new one.

The character of the present satellite lead us to cancel our educational project. Formerly AMSAT-France has been deeply involved in the RS-17 and RS-18 projects, including technical support and flight model manufacture. With the help of French schools AMSAT-France is now developing his educational amateur satellite project.

I apologize for the trouble this project could make to the amateur satellite community and hope that you will help us to limit its impacts.

Best regards,
Bernard Pidoux, f6bvp

President AMSAT France

What problems are you having with the DSP-2232??? The only mod. I'm aware of is one to slightly increase the output signal, but this is only needed if you can't get the proper FM deviation by adjusting the pots. In general the unit works great "as is."

Well there is no question about that Cedric, I guess I was really looking for someone to point out what the violation was, since non-amateurs sending a message over an Amateur Satellite would be no different than Boy Scouts greeting each other during a Jamboree, or someone passing a message over a traffic net, and the fact that Swatch has made no mention of advertisements being transmitted. I just read another thread from the Russians and it looks like the whole things off anyway...

DUH, I better get my 6m beacon off the air before I lose my license... Try again.
P.S□ the last bird that AMSAT-F put up with the Russians a voice beacon, that's a one way transmission big guy.

> No unlicensed operation.

DUH, who said it was unlicenced?

> No commercial advertising in the amateur bands.

DUH, Where has Swatch indicated that there would be advertising on the amateur bands? They have only indicated that messages would be transmitted, they even suggest greetings to friends and relatives.

> □
> Need I go on?

Well you can if you want, but so far you haven't said anything relative to the issue and unless you've been having conversations with AMSAT-R you can't possibly know if operation will be under an amateur call or not and unless your talking to the marketing department of Swatch would have no first hand knowledge of whether advertisments were planned to be transmitted. Your mistaken completly about 1 way transmissions so that leaves you with a page full of nothing.
□

If the messages transmitted from the satellite are identified with an amateur call and have no advertisments for the Swatch company then the above does not apply. Simply by Identifying the satellite as "Beatnik" or "The Swatch Beatnik Satellite" is not illegal, I've heard many corporate amature clubs identify as "This is the (insert corporate name here) amateur radio repeater" W8QQQ etc. If this were illegal it seems to me it would have been dealt with by now, but it's not, so it hasn't :)

If this is true then you'd better call your buddy at AMSAT France and tell him,
G&#65533;rard Auvray, F6FAO, AMSAT
France engineering vice president's daughter recorded a message on the last
Sputnik, I never saw her call sign mentioned anywhere so perhaps she was a third
party?

Transmitting messages from individuals saying hello to friends and relatives is
not business or a commerical affair and that IS what Swatch was/is soliciting.
Let's not forget that the Boy Scout Jamboree goes on the air every year, Boy
Scouts discuss thier rank and Boy Scout related items over the air, and the Boy
Scouts ARE a commercial enterprise and not a non-profit organization.

> .
> (c) No station shall transmit communications in order to engage in any
> form of broadcasting...

You need to go read Part 97 and learn about the provisions for beacons, which are
of course 1 way transmissions exactly the same transmitted on the last
satellite, I suppose since the message on the last bird was recorded by a cute
French girl nobody seemed to mind.

> Would you do business with a corporation that knowingly and outrageous

There are radio clubs on the campuses of corporatons all over the United States,
Since many of these identify themselves with a club name including the
corporation e.g the "Goodyear Amateur Radio Club*" does this not identify the
name of the sponsor?
Sure seems like it to me. If the Goodyear club came into some money and put up
thier own bird do you think they might call it the Goodyear Amateur Satellite?
Huh? Do ya think?
* for example only, it's a fine club.

>
> Some voice messages refers to the BEAT, a registered trade mark by
> Swatch.

So if an amateur is on the Goodyear Club repeater and mentions how good the "Goodyear All Weather 100" series tires are, he is in essence advertising for the company on a company sponsored repeater. If we apply this rule to 2m repeater operations it would certainly change what could be said over the air don't you think? No more usage of trade mark names on the air? har har

> Thus we suggest that no AMSAT organization should describe the
> contents of the message or encourage listening to this non amateur
> compliant satellite using our amateur band.

Why do we not want anyone to know the contents of the messages?
This seems to me to be the crux of the entire arugument sheesh... yea, let's keep everyone in the dark.

> Furthermore we ask that
> keplerian elements of this satellite should not be published in the
> AMSAT keps bulletins.

Brilliant, that will really stick it too em. Are they planning to sabatage the Swatch Website? It already has an online tracker.

Cedric, you don't have to be an attorney to figure this one out, AMSAT-F is pissed and I completely understand why, but I'm sorry to say if Swatch launches a satellite and uses ANY amateur call (with appropriate 2m privileges) identifies the station with that call sign and in between transmits greetings like " My heart beats for my girlfriend " or "From outer space, the beat goes on" there is nothing illegal about it. If it were, then RS-18 would have been in violation too. Since we don't know the details of how Swatch came to contact the Russian space administration we should assume that they may not know that they are intending to transmit in an amateur band.

What might we have gained by bringing to their attention that this is an amateur band and is not available for commercial use, however amateurs around the world would publicize this event, along with a Swatch logo on their web pages if the message content would directly related to amateur radio? Perhaps an amateur radio information page on the Swatch site. But noooooo not us, let's jump all over Swatch and tell em how were gonna f*** 'em by boycotting their products, send them emails full of hateful messages and threats, all this to a company who may have had no idea about amateur regulations but were led to believe it was O.K. Gee I can't understand why more companies don't sponsor amateur endeavors.

From the AMSAT-NA page:
Volunteer organizations with lofty goals are always in need of money, but right now
AMSAT-NA has an especially urgent need. The Phase 3D project to construct and launch the most ambitious amateur
spacecraft to date is quite expensive, and additional funds are urgently needed.

heh heh, call Swatch and hit em up for a donation.... they should be just about ready to cut you a check.

> Ha ha ha ha ha! ROTFL!!

Yea, ha ha ha roll on the floor and then think about how we could have convinced Swatch that the transmissions would reach a very small audience and that in lieu of on air advertising hams around the world would promote Swatch with thier logo on web pages etc and the messages on the satellite would be from amateurs and of amateur content. Do you think you would have got the attention of thier marketing department when you start showing the number of hams around the world? vs how many they might reach with a 2m beacon from space? So we promote Swatch OFF THE AIR and in return Swatch promotes ham radio by adding a ham radio web page and helping put Phase III in the air.

Nahhhhh your right, lets just send Swatch a bunch of hateful, threatening emails, that's a much better idea and much more reflective of the character of amateur radio.

>73 Jeff W4JEF

Don't forget those illegal six and ten meter beacons, that illegal beacon system on 14.100 sponsored by those guys in California, and all those repeater ID'ers that are illegally broadcasting callsigns all the time..... Oh, and don't forget all those packet stations sending beacons, those are illegal too....

What you are missing here, Jeff, it that some people are always looking for a cause. And you are missing the fact that a lot of people don't do their homework before they jump on the bandwagon.

The Russians throw a battery powered, handheld piece of space junk out of the window of MIR that will last for a whole 30 days and it's the end of the world.

Why, because it's an invasion of our Constitutional Rights to Own the ham bands.

Every day I turn on my HF radio, and I hear dozens of unlicensed Chinese, Indonesian, and Filipino stations on every HF band we have.

The digital satellites (UO-22, KO-23, and KO-25) are USELESS when they are over SE Asia because of all the QRM from unlicensed ground stations in the 2 meter band. These are real problems that aren't going to go away in 30 days, but nobody is putting web pages on about the problem, the Slims in SE Asia don't have email address we can complain to, like Swatch does, and AMSAT France can't use any of the satellites when the footprint is over SE Asia, so they don't know about it.

As Ceric says "Just because YOU can't see something, does NOT mean that it isn't there!".

These are real problems, but real problems need real solutions, and real solutions don't come from little boys with HT's and email addresses.

What I'd suggest we do, gang, is go to the Swatch web page at:

http://www.swatch.com/internettime/fs_comments.html

and READ the 'comments' from our fellow hams and then realize something. Every time we have one of these 'call to arms' regarding the ham bands, every time somebody starts posting email addresses for us to send 'comments' to, we wind up looking like a bunch of illiterate idiots, and we wind up pissing off a few more people who didn't know what ham radio was until we came along with our mindless, elementary school playground threats, none of which we can back up:

"I hope the US Military uses this satellite as a Star Wars systems test target!!"

"You are nuts. Look at the ill feeling you have already created. Read your own opinion polls! Who the hell has 146Mhz receivers anyhow? Only HAM operators, and they think you suck big TIME. BEAT it."

"Our Governments do not take kindly to this invasion of our (my) frequencies."

"I will encourage and support any possible litigation against your company to prevent this action or to seek damages as a result."

Sure you will, Lumpy, you'll be the first guy to kick in 10 grand to the VHF Legal Defense Fund.......

Wake up, children. It's 1999. We need to be thinking of ways to justify keeping what amateur frequencies we have, and the fact that we can send lots of mindless threats via email isn't a great justification.

If you want to send a note to Swatch, get somebody with a third grade education to compose it for you so you don't wind up looking like a total fool...... and when you send it, have enuff guts to sign your name to it, like my friend Carl Stevenson did......

If you read the 'history' of this 'problem', you will see that the French were 'duped' by the Russians. Did anybody every stop and think for a few milliseconds that maybe Swatch was too ?

Did anybody ever stop and think for a few milliseconds that maybe a nice explanation to Swatch that they have been duped into doing something they should not be doing might be just a TINY bit more effective than threatening to 'jam the uplink' ?

Of course not. When I passed the same test that Rebecca passed, I became the OWNER of the ham bands and I have the God given right to KEY the HT and nobody can ever take that away from me.

You guys are just too much..... probably 75% of you couldn't tell time if you had three Swatch Watches.....

73, Jim KH2D

P.S. To the pinhead in Ohio who told Swatch that they would be jamming the input to the local repeater 1) get a life and 2) get a VHF band plan......

Amazing, now I see messages on the Swatch comments site claiming that it is all an April fool hoax. From someone named Tim(!) but maybe these are phoney? ButtheFrench guy also said it is a "poisson Avril!" What is that? April Poison?

Maybe that is French for April Fool!

I also see a bulletin is out now on the web saying -

Just in! In this memo from AMSAT Russia President Eugene Labutini, RA3APR, AMSAT-R apologizes for any trouble which was brought to amateur satellite community and hope that amateurs in the entire world will understand this situation and separate AMSAT-R and SCSC. He writes that in the future AMSAT-R will "stop any attempt from SCSC to use AMSAT-R in commercial projects".

This is a letter from AMSAT Russia Eugene Labutin, RA3APR, to the other AMSAT organizations apologizing for the situation with the new satellite.

Letter from Eugene Labutin regarding Beatnik

"Dear AMSAT colleagues,

I was very disappoint to receive message from Bernard Pidoux, f6bvp, president of AMSAT France.

I want to explain the situation on this matter.

Everything what happened does not have any relation to AMSAT-R. All discussion with Swatch Company in Switzerland was made by Space Flight Control Center (SCSC), Vladimir Solovyev and Serge Samburov singed all documents. They do not inform AMSAT-R that they going to sign this contract under the name of AMSAT-R. Everything was made behind AMSAT-R and I have got this information from only f6bvp message. More than this - only three persons of AMSAT-R have right to sign this type of documents - president and two vice presidents.

RA3APR, Eugene Labutin - president of AMSAT-R
RU3AIZ, Alex Matvietz - vice president of AMSAT-R
RA3APW, Karen Tadewosyan - vice president of AMSAT-R

Nobody of these persons was even informed that this contract was signed.

AMSAT-R very sorry for this bad situation, and very sorry that some people using AMSAT-R name in their commercial project.

AMSAT-R apologizes for any trouble witch was brought to amateur satellite community and hope that amateurs in the entire world will understand this situation and separate AMSAT-R and SCSC. AMSAT-R will stop any attempt from SCSC to use AMSAT-R in commercial projects.

Best Regards
Eugene Labutin, RA3APR.
President of AMSAT-R "
= = = =

Again, one has to wonder WHY everyone is apologizng when this operation will not be breaking ANY American Amateur Radio Rules!!

Why can't we just leave Swatch alone?

Anyway, it is probably just a trick on people like Cedric, Jeff. Tom and 4-1000, who just can't let it go!!

Hi All

The new release of RadioRaft permits to decode 12 ARQ modes,
8 FEC, 3 modes by packets and many others.
It's a DOS program that runs with the Hamcomm interface or a
demodulator.
It is usefull, fast and full automatic: detection of the
speed, mode and shift in less than 15 sec.
Among the innovations with regard to version 2:
- 6 new modes: Acars, Pocsag, Pactor-I, Dup-Arq, Gmdss-Dsc
and Uosat-data of Oscar-11
- shiftmeter
- FFSK and DFSK demodulation
- many improvements in the quality of the decoding

For all details and downloading:
http://www.TheOffice.net/RadioRaft/
or
http://pro.wanadoo.fr/radioraft/

The free version for a review permits to detect all modes
but displays only Baudot, Arq-E, Fec-A, Sitor-A (Amtor-A.
"Digit", the "bit by bit" mode is also available.
It is not limited in time.

Good decoding.

Francois Guillet
F6FLT@TheOffice.net

Let's see, since we posting this stuff on rec.radio.shortwave...

My Drake SW8 was a Philco Tombstone in it's past life.

My Sony 7600G was a transistor AM back in the late 50's

My Sangean 818 was an 8-track player back in '73.

As for my Baygen, it was a detector back in 1915 !

I removed this from antennas, it really doesn't belong there so I hope you don't mind.

First let me say, you can't possibly offend me, and I'll try to respond in a more humble fashion if it
will help to show more clearly my opinion on the matter. This is getting quite large so it's edited.

> >DUH, who said it was unlicenced?
>
> Who said that it was? OK then, "little guy", what is the CALLSIGN of
> the operation ??

So we'll agree that neither of us know for sure whether it's licensed or unlicensed operation. Since it wouldn't require much effort at ALL to have an amateur tack his call onto the 10 minute ID timer, lets assume it will have a valid callsign for the purpose of our discussion. If it didn't have an amateur call their wouldn't be much left to discuss and I would concur that it would be in violation.

> > No commercial advertising in the amateur bands.
>
> >DUH, Where has Swatch indicated that there would be advertising on the amateur
> >bands? They have only indicated that messages would be transmitted, they even
> >suggest greetings to friends and relatives.
>
> By unlicensed operators with no control operator in violation of
> International law.

No control operator is necessary, since it's being operated as a beacon. The same as the last RS-18 or Dove-17 or any other satellite that is transmitting as a beacon and transmitting one way.

 97.203 Beacon station.
(a) Any amateur station licensed to a holder of a Technician, General, Advanced or
Amateur Extra Class operator
license may be a beacon. A holder of a Technician, General, Advanced or Amateur Extra
Class operator license
may be the control operator of a beacon, subject to the privileges of the class of
operator license held.
(b) A beacon must not concurrently transmit on more than 1 channel in the same amateur
service frequency band,
from the same station location.
(c) The transmitter power of a beacon must not exceed 100 W.
(d) A beacon may be automatically controlled while it is transmitting on the
28.20 28.30 MHz, 50.06 50.08 MHz,
144.275 144.300 MHz, 222.05 222.06 MHz or 432.300 432.400 MHz segments, or on the

33 cm and shorter wavelength bands.
(g) A beacon may transmit one-way communications.

Key points, automatically controlled means no control op present at the transmitting site.
A beacon may transmit one-way communications.

If I put a beacon on the air with my sons voice that says "Hello From Detroit Michigan" he is a 3rd party, is not a control op, and is unlicensed. As long as the beacon i.d's with my call sign the station is perfectly legal.

> >and unless you've been having conversations with AMSAT-R you can't possibly

> >transmissions so that leaves you with a page full of nothing.
>
> Of course, the President of Amsat France is apolgizing for a page full
> of nothing.

I don't doubt the President of AMSAT is appologizing, I only question whether Swatch's proposed operation is going
to be legal or not. There is no doubt that AMSAT-F felt as though they had been duped, but their apology doesn't effect one way or the other whether the transmissions would be legal or not.

> Your immature, combative attitude reveals just how unsure you are
> about the whole thing!

Ok so I post to the newsgroups some thoughts on what may or may not be legal about this project and all of a sudden I'm immature? Heh heh, go read the comments sent to Swatch.

>
> But of course you are ASSUMING this to be the case, even though they
> have plainly stated their intention to have their trademark named
> verbally & audibly in every message!

Yes I am assuming this, I suppose I like to give someone the benefit of the doubt instead of thrashing their web site with hateful, threatening e-mail. Even if they did pull it off, the time to protest is after the operation, do it formally with

information about what was said, callsigns used or lack there of etc. Since no one knows for sure exactly what arrangements Swatch had made I think it's ridiculous to nail them to the cross without having any details.

If at the end of each transmission I decide to say "and boy do I love Pepsi" while it might be a bit strange it is not illegal,
if my son who is unlicensed and a 3rd party decides to say "boy do I love Pepsi" at the end of each transmission it is not illegal.
If it is, please site the violation number so I can better understand.

> Non-commercil? FEH!!
>

>
> Ha! In your not-so-humble opinion maybe.
>
> But Tim, YOUR OPINION to the contrary will not invalidate
> international laws!

Well O.K. to hell with my opinion, site the law that prohibits me from calling my station anything I want, as long as the appropriate call sign is used. e.g. "From ARRL Headquarters, Newington, CT" hammy now did the FCC assign the callsign W1AW or did the assign the call "ARRL Headquarters". Now if you want to tell me that it's illegal for the Swatch Satellite to identify itself as "Beatnik" along with an amateur call then I guess we'll have to put a stop to the ARRL's illegal station I.D as well.

> Most countries do NOT allow a product name to be NAMED OVER THE AIR on
> the amateur bands, including all European countries.

I have no knowledge of this, could you name some of the countries where this law exists?

> You are defending something like your life depends on it and you don't
> have a CLUE what you are talking about!

Whoa hold on there pahhhd ner, I'm not defending anyone, I'm just interested in knowing whether Swatch was indeed going to break the law or not. As far as having a clue, you need to get one with respect to international 3rd party traffic.

> ?
> (2) It is absolutely forbidden for amateur stations to be used for
> transmitting international communications on behalf of thrid parties.
> PERIOD!

Well according to you perhaps but the FCC, and the government who issued my license tells me otherwise, I'll bet if you take a second look at the ITU reg your quoting you'll find the exceptions. By the way the ARRL has a web page which shows a list of all the countries we have third party traffic agreements with, you are full of it.
http://www.arrl.org/field/regulations/io/3rdparty.html

? 97.115 Third party communications.
(a) An amateur station may transmit messages for a third party to:

(1) Any station within the jurisdiction of the United States.
(2) Any station within the jurisdiction of any foreign government whose administration has made arrangements with the United States to allow amateur stations to be used for transmitting international communications on behalf of third parties. No station shall transmit messages for a third party to any station within the jurisdiction of any foreign government whose admin-istration has not made such an ar-rangement.

> >> U.S. Amateur Regulations

> >> of any party.....
>
> And that IS the whole point of this exercise.

Newp, sorry no business is being conducted, the ole agument was won long ago, yes Virginia you can order a pizza using the 2m autopatch, and when the Pizza shop picks up the phone and says "Pizza Magic" it is not a violation and that has been written about in QST. Now if the Pizza shop get's on the air from thier shop and says "Come on down to Pizza Magic, we have a special tonight" were talking about a different senario, simply using a trademark name on the air does not hold up. All this of course depends on the content of the messages and whether an amateur call is used on the satellite.

> >Transmitting messages from individuals saying hello to friends and relatives is

The BS of A is a business, with paid employee's. They have a financial interest in promoting their organization.

> >> (c) No station shall transmit communications in order to engage in any
> >> form of broadcasting...
>
> And there it is again! They break ALL these rules and TIm says it is
> OK! Ah well, Tim. ANything goes, and it WILL if you get your way in
> this one!

No not quite, you seem to be drifting again. Because I question the interpretation of a particular regulation you seem to feel as though I have an "anything goes" attitude and your very very wrong, for one I'm not trying to "get my way" I don't support the

commercial use of the amateur bands either, all I'm saying is that before we publicly
hang the Swatch company we should:
A) Know whether the transmission will be identified with an amateur call
B) Know the content of the messages being sent

Well how is it irrelevant? Since you claim it is illegal to transmit third party
international traffic "period" I wonder why AMSAT-F would have allowed this?

> >> Would you do business with a corporation that knowingly and outrageous

Again, since AMSAT-F doesn't seem to want to share exactly what these messages are,
and since neither of us know whether an amateur call will be used should we just
assume it's illegal without having any details? Also you make comments like
"knowingly" promotes violations of international law, really? You know for a fact that
the Swatch company is doing this knowing they could be in violation and not a simply
misunderstanding of radio regulations? You must be clairvoyant as well.

Instead of accusing me of selling out amateur radio why not respond to the proposed scenario, If a third party makes a comment on the Goodyear* Amateur Repeater and says "I love Goodyear Tires" is this in violation? Even though the club may have paid for all the equipment privatly, if it's on the campus or even off site, but Goodyear pays for the room the club is in then they in essence are sponsoring the club. Soooo now we have a Corporation, sponsoring a club repeater, with a third party traffic making a comment about the Goodyear company. Do you think this is in violation? Simple question, nothing to do with Almighty dollars or selling out ham radio.

> >* for example only, it's a fine club.
>
> Correct. In most countries that is a violation of the law, for which
> they would be prosecuted. Again, you want to force American values (or
> lack thereof) on other countries.

Really? Most countries? Please name a few for me that would prosecute a radio amateur for mentioning a brand name on the air, I'm dying to see the list. I haven't worked a DX station yet that hasn't mentioned the brand name of his station equipment, sheesh talk about absurd drivel, where are you getting this from?

>
> Well, this is done insensitively in many other spheres of life,

You know, I enjoy discussing the topic of whether the Swatch satellite project violates ITU radio regs but your comments are beginning to annoy me, where in my commentary do I bring you to the conclusion that I think I own the planet? Let's stick to the discussion if you can.

> >> Thus we suggest that no AMSAT organization should describe the
> >> contents of the message or encourage listening to this non amateur
> >> compliant satellite using our amateur band.
> >
> >Why do we not want anyone to know the contents of the messages?
>
> Do we have to wear oit out to drum the reasoning into you Tim?
> No, I suspect you are too dense to ever get it.

O.k lemme spell it out for you, AMSAT-F claims the messages they heard were unacceptable, really? OK why not share them with the rest of the amateur community, of course I'm not making any decisions on what's going to happen with the satellite but I'd rather be permitted to make up my own mind whether the messages are unaceptable or not. I suppose if AMSAT-F says it's no good that's just fine with you, but not for me.

> Ha ha ha ha ha! Yeah, TIm! S-U-R-E! Tim, yeah, THAT is the crux!
> What a dimwit comment!

Dimwit comment? Your whole argument has been that these messages are of a commercial nature, how would you know whether or not they are unless they were published or made available, tell me what about that is so dimwit please? Like many you seem to be good with the name calling but come up short when asked to site references.

> Your time will come I expect. Hollingsworth may be looking for you
> already for all we know.

My time will come for what? Because I decide to engage in a discussion about whether the Swatch satellite project is legal or not my time will come? Why would Hollingsworth be looking for me? Talk about dimwitted remarks.

> Apparently, if it's illegal, Tim is for it!

Apparently you have difficulty understanding the discussion, I never once said I was in support of Swatch at all, show me in a previous post where I did and I'll eat my words. I simply had a difference of opinion, regarding issues like whether or not it was a beacon transmitter and whether the content was in violation of amateur regulations.

> You really should go do something else. This is obviously not even
> beginning to dawn on you yet!

Look here's the bottom line , you seem to be more interested in attacking me personally that you do discussing the issue. This whole thing was handled completly wrong which is why I even got started in this discussion, someone finds a web page where Swatch is planning to transmit messages from a satellite launched from space, now instead of organizing ourselves and having AMSAT-NA or the ARRL or any other organization of your choice contact Swatch and ask what their specific intentions are, a few individuals jump the gun and post the address with instructions to tell Swatch how you feel!

Well, they sure did, go read the pages. Nothing but hatefull threatening letters. What might we have gained by approaching Swatch when AMSAT-F learned what had happened? Explaining that they could potentially be in violation of ITU regulations and that the world wide ham community would strongly oppose this. Perhaps offer a win win solution

where Swatch would provide links or a page containing ham radio informaton and we as an amateur community would help promote Swatch (off the air) in exhange for messages of amateur content on the satellite. But noooo were gonna jump right in and tell Swatch how were gonna f*** em and boycott their products, all this to a company who may simply not have known specifics of the frequency of choice. Now take a look at the AMSAT page and take note where they talk about how big of an endeavor Phase III is going to be and how they really need some money now. Har har, yea go hit up Swatch for a contribution, they should be real excited about working with the amateur community by now. Under the heading "Donations" go to:
http://www.amsat.org/amsat/amsat-na/orginfo.html
Swatch may have indeed been contacted by AMSAT, but if they were nothing was made public and the first comment's from AMSAT-F were to boycott Swatch.

I agree completly

> No one should condone hateful messages directed at Swatch.

> organization did by SELLING usage of an amateur radio satellite to a
> commercial concern!

Agreed, but since AMSAT-F won't share the content of the messages with anyone it's a bit difficult to know whether Swatch was/is truly in violation or perhaps bending the rules without breaking them.

Has anybody experimented with links over 56kb(maby 100+kb) via microwave or RF etc ?

If so could you please email/reply to this post?

I am interested in this area with the launch of the new P3D Satellite.

No, I was simply pointing out that there amateur satellites that transmit one way communications, and guess what, they aren't illegal! Hmmm.... beacons, which we hams are familiar with operate as one way transmitters.

I'm not saying I'm happy with the Swatch situation, but I don't think we'll lose the 2 meter band over the situation either.

I'm sure I'll catch a few more flames over some of these statements, so fire away <grin>. At least I live somewhere I can state my opinions.

SkyQuest Balloon Launch May 1, Boston

SkyQuest 3 will launch (weather permitting) Saturday at Milton, MA
just outside Boston at the grand opening of the newly renovated Blue
Hill Meteorological Observatory and brand new Science Museum.

http://www.bluehill.org has the story of this
more than 100 year old weather observatory
which conducted landmark research, including
early experiments in VHF radio propagation
contributing to the theory of atmospheric ducting
of radio waves.

The balloon will carry a 2 meter transmitter that can be heard
on both scanner radios and amateur radio 2 meter transceivers for
hundreds of miles (SkyQuest 2 launched from eastern Mass. was heard
in Philadelphia and southern New Jersey!)

Full details, such as frequency and exact launch time (as soon as
available), may be found at the HABLIC website (see below and the
February 1999 QST balloon article).

Please email me at h1riley@umassd.edu to subscribe to the
SkyQuest mailing list (for launch notices and tech info).

Well there is no question about that Cedric, I guess I was really
looking for
someone to point out what the violation was, since non-amateurs
sending a
message over an Amateur Satellite would be no different than Boy
Scouts
greeting each other during a Jamboree,

Get a clue! The Scouts have a CONTROL operator there!
That operator is a LICENSED amateur. Please stop using repetition and
circular logic to try to buttress your flawed position!

That is NOT exactly like when a non-amateur puts a voice beacon on the
air and EVERY MESSAGE contains the Company (unlicensed remember, Tim!)
SAYING it's company name, on OUR amateur airwaves all over the globe
in violation of national and international rules.

You REALLY should begin THINKING about this one instead of
rationalizing away these acts of piracy from your comfortable spot in
the land that let off O.J and Bill!

You wouldn't recognize the violations in this, if they walked up to
you on the street and slapped you!

BTW - Swatch will have their check in the mail to you pronto!

Tim, I happen to think that you are wrong on most of this. I hope you
won't be offended by my rebuttal, but rather that you would THINK
about what I am saying more.

Try to think beyond having another knee-jerk reaction as you read this
one!

On Mon, 05 Apr 1999 17:20:58 -0400, Tim <ka8ddz@eaglequest.com> wrote:

But of course you are ASSUMING this to be the case, even though they
have plainly stated their intention to have their trademark named
verbally & audibly in every message!

Non-commercil? FEH!!

> Simply by Identifying the satellite as "Beatnik" or "The Swatch Beatnik
>Satellite" is not illegal,

Ha! In your not-so-humble opinion maybe.

But Tim, YOUR OPINION to the contrary will not invalidate
international laws!

Most countries do NOT allow a product name to be NAMED OVER THE AIR on
the amateur bands, including all European countries.

You are defending something like your life depends on it and you don't
have a CLUE what you are talking about!

>I've heard many corporate amature clubs identify as

AMAT-E-U-R, Tim!!

An ARMATURE is part of an electric motor!!!

>"This is the (insert corporate name here) amateur radio repeater" W8QQQ etc. If
>this were illegal it seems to me it would have been dealt with by now, but it's
>not, so it hasn't :)

If you could park this pirate satellite over AMerica that would be OK<
I suppose.

But even if you COULD, that is NOT what it will say!

>> Article 32: Amateur Service and Amateur-Satellite Service
>> Section I. Amateur Service
>> (2) It is absolutely forbidden for amateur stations to be used for

>
>If this is true then you'd better call your buddy at AMSAT France and tell him,
>G�rard Auvray, F6FAO, AMSAT

Funny, but Tim, I don't see the word EXCEPT after that sentence at
all!!

(2) It is absolutely forbidden for amateur stations to be used for
transmitting international communications on behalf of thrid parties.
PERIOD!

>France engineering vice president's daughter recorded a message on the last
>Sputnik, I never saw her call sign mentioned anywhere so perhaps she was a third
>party?

Didn't your mother ever tell you this basic rule of life, Tim:

"TWO WRONGS DO NOT MAKE A RIGHT!"

>> U.S. Amateur Regulations
>> (This rule also appears in most nation's individual laws concerning
>> Amateur Radio)
>> Section 97.113 Prohibited transmissions
>> 97.113 (a) No amateur station shall transmit any communication the
>> purpose of which is to facilitate the business or commercial affairs
>> of any party.....

And that IS the whole point of this exercise.

>Transmitting messages from individuals saying hello to friends and relatives is
>not business or a commerical affair and that IS what Swatch was/is soliciting.

With their Trade Mark name included, yes.

>Let's not forget that the Boy Scout Jamboree goes on the air every year, Boy
>Scouts discuss thier rank and Boy Scout related items over the air, and the Boy
>Scouts ARE a commercial enterprise and not a non-profit organization.

Poor comparison, between a social service organization and a business.

>> (c) No station shall transmit communications in order to engage in any
>> form of broadcasting...

And there it is again! They break ALL these rules and TIm says it is
OK! Ah well, Tim. ANything goes, and it WILL if you get your way in
this one!

>You need to go read Part 97 and learn about the provisions for beacons,

It is NOT a beacon though, so again, you are TOTALLY barking up the
wrong tree.

A rule that allows tricycles, does not get used to justify the use of
motorcycles, hence, you are blowing smoke once agian just like all the
rest of your crap arguments in this matter!

How much is Swatch paying you, "little guy?"

>which are
>of course 1 way transmissions exactly the same transmitted on the last
>satellite, I suppose since the message on the last bird was recorded by a cute
>French girl nobody seemed to mind.

Funny, but irrelevant comment.

>> Would you do business with a corporation that knowingly and outrageous
>> promotes violations of international and national laws?

>Huh? Do ya think?

Obviously you only think one way, and it is a waste of time trying to
get you to think beyond the ALmighty Dollar that you love and the
selling out of Amateur Radio that you are helping to promote.

>* for example only, it's a fine club.
>
>> Some voice messages refers to the BEAT, a registered trade mark by
>> Swatch.
>
>So if an amateur is on the Goodyear Club repeater and mentions how good the
>"Goodyear All Weather 100" series tires are, he is in essence advertising for the
>company on a company sponsored repeater.

Correct. In most countries that is a violation of the law, for which
they would be prosecuted. Again, you want to force American values (or
lack thereof) on other countries.

Well, this is done insensitively in many other spheres of life,
especially in Asia, so I am not surprised to see someone advocate it
in the arena of Amateur Radio too. You think you own the planet, but
you don't!

>If we apply this rule to 2m repeater
>operations it would certainly change what could be said over the air don't you
>think? No more usage of trade mark names on the air? har har

Again, your parochial thinking prevents you from seeing beyond your
short-sighted vision of a world whose borders end at the AMERICAN
coastline!

>> Thus we suggest that no AMSAT organization should describe the
>> contents of the message or encourage listening to this non amateur
>> compliant satellite using our amateur band.
>
>Why do we not want anyone to know the contents of the messages?

Do we have to wear oit out to drum the reasoning into you Tim?
No, I suspect you are too dense to ever get it.

At least I CAN understand your reasoning evcen if I disagree with it.

You indicate that you can't grasp what Cedric or anyone else who
expresses concerns about this matter has said at all!

>This seems to me to be the crux of the entire arugument sheesh... yea, let's keep
>everyone in the dark.

Ha ha ha ha ha! Yeah, TIm! S-U-R-E! Tim, yeah, THAT is the crux!
What a dimwit comment!

>> Furthermore we ask that
>> keplerian elements of this satellite should not be published in the
>> AMSAT keps bulletins.
>
>Brilliant, that will really stick it too em. Are they planning to sabatage the
>Swatch Website? It already has an online tracker.

No, it is the PIRATES like SWATCH and the RUssians (amnd maybe you)who
think of such devious plots! NOT the decent people who express concern
about piracy.

Your time will come I expect. Hollingsworth may be looking for you
already for all we know.

Apparently, if it's illegal, Tim is for it!

>My dimes worth,
>
>Tim ka8ddz

Or maybe 1.5 cents anyway!

Be well, Tim ,and I hope you are not too offended by my well-reasoned
remarks about all of this.

You really should go do something else. This is obviously not even
beginning to dawn on you yet!

Interesting suggestion Tim, from someone who thinks it is all just an
"Avril Poission!"

It is right to hate evil and to hate wrong doing, but to love that
which is good.

It is wrong to hate Swatch. It is wrong to hate people or ot be
malevolent toward them. Thefolks aw Swatch (IF this is all NOT a hoax)
are probably not aware that they were trying to do was something
illegal. They were probably confused by certain people who will
advocate the violation of international treaties for their own
financial gain.

No one should condone hateful messages directed at Swatch.
However, no one should condone what the non-amateurs at that SCSC
organization did by SELLING usage of an amateur radio satellite to a
commercial concern!

This bunch of timid Timmys didn't do shit until after the ball was rolling, aided by myself, Jeff Herman and others who pointed out there was a box to leave messages in. That forward looking bunch in Newington had to check with counsel first, as usual, before they took a stand. Must've needed to be sure it wasn't a division of Yaesu or some other contest gear company the ARRL ass kisses...

SB SPACE ARL ARLS002
ARLS002 ARRL Advises Swatch to Cancel "Beatnik" Launch

The ARRL has weighed into the burgeoning controversy over messages gathered by the Swatch watch company and programmed for transmission on 2 meters from the mini-Sputnik satellite. In a fax today, League Executive Vice President David Sumner, K1ZZ, suggested to Swatch Group CEO Nicolas E. Hayek that the Swiss firm cancel the launch of the "Beatnik" satellite and use a commercial satellite for its project instead.

Thanks for nothing, Baldthonia.

First off, anyone with a HOTMAIL account has no right to protest spam, commercialism, or violation of our rights. HOTMAIL is the biggest spam factory alive. AND

Jamming the project in any form is arrogant, and far more unethical and counter productive than the "perceived" intrusion into the space that a few amateurs seem to think they own personally.
The same bigoted attitude of the CB world has moved to space. The sputnik replica may bring a number of new people into the hobby. The threats against it are degrading to everyone associated with amateur radio. They make us all look very bad. Of course Musat and the other Sputnik replicas were not spam, uh, right? How much has amsat France paid to launch "their" satellite?
Get your facts straight before making threats.

Although I have now passed my 5 wpm code, I was a no-code technician for 8+ years, right after it became available. I have now passed my general written test TWICE, only to still fail at 13 wpm. I must take exception to the person who originally wrote this post (and was too chicken to put his REAL name in) and the second follow up, who also didn't leave a name. I and many others served our communities well with our no-code licenses. I did and still do volunteer with the Office of Emergency Services, the American Red Cross Disaster Relief Services division, as well as functioning as a trained severe weather spotter. I have been as asset to my community, as a reliable communications resource in emergencies. (and I have worked MANY), remember all the tornadoes in March 1997, and 20-30 + so far this year. Unlike you, I do not sit around moaning that the hobby is not what I want it to be, I get out and make it what I want it to be. Sure, I would like to see code done way with, or at least the maximum requirement dropped to either 5 or 13 wpm, but I don't sit around whining about it like many of you who want code mandatory do. There are bad hams who are no-code techs, and there are just as many Extras who are filthy both in person and on the air as well in their language and many are just plain terrible operators in general. Passing morse code does not automatically make one a saint. (Sorry to burst your bubble there, but deny it all you want, it HAS been burst, as you all know this is the truth.)

You can go on believing you are right and I am wrong, but you will fade away and crumble to dust, just like CW, while the rest of us continue to improve and expand our hobby and get on with our lives.

Signed,
Matt Nelson

It doesn't matter if they send them in 1024QAM, they have
no business in the amateur satellite band.

O. I C.

It's necessary to rid the world of AIDS too. Is NCI (TM) doing
anything along those lines ?

Has NCI (TM) lodged any formal protests with the government
in Yugoslavia about the problems over there ?

Personally, I would think you jumped on the band wagon for
a little P.R. but that's only my opinion. Anyway, maybe you
you can get Cedric to sign up.

Keep up the good work. What amateur radio needs are
organizations like NCI (TM) to save us from disposable hand
launched Russian space junk. Thousands of lives will be
saved if you can stop the Russians from beaconing 1 watt
voice messages for 30 days.......

Apparently arguing with a totally clueless fellow-amateur who does not READ the messages he repsonds to on Usenet, because he is so busy thinking about what HE is going to say next.

You still have not even begun to grasp the basic thoughts I have been conveying to you, because you ALWAYS have to have an answer whether it is right or wrong.

THATis why you blindly consider it acceptable to go fly a satellite over someone else's sovereign territory and violate their laws, AND violate international treaties to which America, Russia and France are all signatories.

Your justifications for your reasoning are absolutely laughable, Tim!

You should quit while you are ahead, before you embarrass yourself even further with this absurdity!

switched topics yet again and wrote:

>Look here's the bottom line , you seem to be more interested in attacking me
personally that you do discussing the issue. This whole thing was
handled completly
wrong which is why I even got started in this discussion, someone
finds a web page
where Swatch is planning to transmit messages from a satellite
launched from space,
now instead of organizing ourselves and having AMSAT-NA or the ARRL or
any other
organization of your choice contact Swatch and ask what their specific
intentions are,
a few individuals jump the gun and post the address with instructions
to tell Swatch
how you feel!

>Tim ka8ddz

OK, if THAT is the bottom line, then your argument has several
different bottom lines (at least according to you)...

Responding then to the CURRENT "Tim's-bottom-line-whim-of-the-moment"
let me say that I am flabergasted that you can't think and act for
yourself. You claim it is unethical for people to state their point of
view to one another unless they let some large organization speak for
them! STRANGE! I have nothing against ARRL speaking to Swatch about
this! But I see nothing inherently "wrong", illegal or dangerous if
someone wants to give their point of view to Swatch.

This is America Tim! We have a First Amendment here. We AREA allowed
to speak for ourselves!

You are SOOOO Paranoid about what someone might say!

No Code International has lodged formal complaints with the
FCC, the US State Department, the ITU, and both Swiss and
Russian radio regulatory agencies, protesting the announcement
of the impending commencement of messages of a commercial
nature on frequencies allocated to the Amateur Radio Service
and the Amateur Satellite Service by The Swatch Group Ltd.,
of Switzerland, using what was supposed to be an educational
amateur radio satellite.

The satellite is reportedly scheduled to be launched from
the Russian space station MIR some time this month and would
transmit in the 145.8-146 MHz Amateur Satellite Service sub-
band.

NCI has also sent messages to the directors and officers of
the ARRL, TAPR, AMSAT, and the IARU, asking them to join in
the effort to stop this commandeering of amateur frequencies
for broadcast messages of a commercial nature.

For more information, links to articles on the subject, and
to view a copy of NCI's formal statement of protest, see:

http://www.nocode.org/articles

> them!

I did not say this, I never once mentioned unethical, and never once mentioned "unless they let some large organization speak for them" I suggested that we might have benifited by having AMSAT-NA or the ARRL contact Swatch and explain that they may be in violation of radio regulations and that a win win situation may have come from this by convincing Swatch that amateurs might help promote thier publicity stunt (off the air) in exchange for message by amateurs with amateur content. As opposed to threatening them with boycotts of thier product. Do you feel that your point will be better made by misquoting me?

> STRANGE! I have nothing against ARRL speaking to Swatch about
> this! But I see nothing inherently "wrong", illegal or dangerous if
> someone wants to give their point of view to Swatch.

I don't think it's illegal or dangerous either Cedric, just a poorly managed response by the amateur community.

> This is America Tim!&#65533; We have a First Amendment here. We AREA allowed
> to speak for ourselves!

Absolutly

> You are SOOOO Paranoid about what someone might say!

Paranoid? Not hardly, Tell Swatch exaclty how you feel, but in the end if Swatch could have been persueded to work WITH the amateur community and sponser the satellite without the commercial content we could could have benifited greatly. Instead amateurs sent threatening emails of boycotts in an attempt to stiffle the whole project. So while your ready to throw your first amendment rights in my face, consider the alternative and then tell me what we have accomplished.
&#65533;

Sigh! What a pathetic exaggeration/lie...

Tim, I have told you a MILLION times NOT to exaggerate!

When you tell Swatch, no more Swatch products in my house ever again, that's a
threat.
When you refer to someone as hubris, that's hateful.
Is this an exaggeration?

-from the Swatch site:
You have violated ME, As well as my license. No Swatch products in my house ever
again!
How to beat the illegal use of Ham bands.
1. Boycott swatch.
2. Use the frequencies so their message does not get through.
Turn your beams to the bird...if you cant beat em ... jam em!
What hubris allows the SWATCH (planned-obsolecense timepieces) to usurp a public HAM
frequency? Is that a boycott rising now?

> AMSAT never asked amateurs to boycott Swatch!

From the ARRL page:
Pidoux apologized for the situation and called on AMSAT organizations to refrain from describing the
contents of the satellite's messages and to discourage listening "to this nonamateur-compliant satellite
using our amateur band." He also asked that the Keplerian elements not be published by AMSAT

In other words, boycott the satellite. Perhaps a quick look in the dictionary would help you to better understand
what a boycott is.

> Some individual hams in the USA did that.

And so did AMSAT-F in the letter published on the ARRL site

> You really should get a clue!

Perhaps if after reading the above quote you'll have one too.

> all signatories.

No I do not blindly consider anything, I responded with comments about RS-18, which by the way transmitted a message celebrating Air and Space, not ham radio which was also sponsored by a French Aeronautical organization, not ham radio.
I also pointed out that at least under Part 97 beacon transmissons are allowed and are appropriate on those frequencies. I also pointed out that 3rd party international traffic IS permitted and sited the ARRL page that showed the countries that allow it. This was in response to his statement that International 3rd party traffic is not permitted PERIOD.

Tim, some people just like to yap senselessly and argue over anything.

If the other guy says "black!" they will say "white!"

Apparently you are one of those argumentative folks who doesn't think beyond just saying the opposite of what the other person says.

On Wed, 07 Apr 1999 01:24:31 -0400, Tim <ka8ddz@eaglequest.com> wrote:

>I did not say this, I never once mentioned unethical,

OK< if you want to pick nits, you did not use those exact words, but you DID heavily criticize amateurs for speaking out on their own recognisance and for not waiting until the League spoke for them.

Correct?

Your strong implication was that their behavior was unethical.

You may not have used those EXACT words TIm, but any 3rd grader could figure out that that WAS what you were saying.

Loks like you are incapable of deductive reasoning. At least, not when it doesn't suit you!

I first thought that, too. The fact, that this story started March
20th, makes it unlikely, that this is an April fool.
BTW: poisson != poison. Poisson means fish. "Poisson Avril" is an old
tradition in France. On April 1st You attach paper fish on the back of
people (preferrably in a way, that they won't notice).
>
> Maybe that is French for April Fool!
>

Exactly.

> AMSAT-R apologizes for any trouble witch was brought to amateur
> satellite community and hope that amateurs in the entire world will
> understand this situation and separate AMSAT-R and SCSC. AMSAT-R will
> stop any attempt from SCSC to use AMSAT-R in commercial projects.

If this is true, AMSAT was cheated by SCSC. I do not wonder that, at
the moment Russian companies try to make money from everything You
could dream of. If You want to make business with Russia and Russian
companies, You have to know that.

> Why can't we just leave Swatch alone?

They ARE breaking international treaties, if they use amateur radio
frequencies. I could not find even a single word in their web pages
about operating under a licenced call sign. Instead they even want to
transmit messages from non licenced people adding their (Swatch) name
to every message.
Under these circumstances I can't beleive this NOT to be a commercial
abuse of the strictly NON commercial 2m amateur band.

BTW. I had a phone call yesterday with a guy from BAKOM (Bundesamt
fuer Kommunikation, the Swiss FCC, http://www.bakom.ch/). They haven't
heard of that up to then. As far as the guy knew, Swatch did not
contact the BAKOM about that. It puzzles me, however, that no Swiss
amateur has contacted the BAKOM up to now. Aren't they concerned about
this intrusion?
IMO there are two possibilities:
1. Swatch has made a contract with SCSC without knowing that operating

a commercial satellite on amateur frequencies is illegal. Although I tend to give them a chance (in dubio pro reo) I think this case is unlikely.
2. Swatch simply ignores that they ar doing something illegal claiming responsibility is at SCSC (the operator) and they have a right to transmit their spam (they paid for that right).

The fact, that there is no public statement from Swatch after nearly three weeks of comments sent to their comments page makes me believe, that they try to wait for the complaints to end (one more reason to keep complaining) and that 2. is the most likely case.

BAKOM will investigate the case and (hopefully) keep me informed (as I asked them to do so). If I get new information I will post it to rec.radio.amateur.space,rec.radio.amateur.misc and rec.radio.amateur.policy.

I hope this will come to a happy end. Maybe we even can convince Swatch to support AMSAT in general (this might be the best promotion for them). To convince them to do so we should avoid, however, to send them profane mails with harrassing comments (e.g. the never ending preposterous comparisons with Hitler and Nazi-Germany, which tell actually more about the character of the poster).

Hope this helps

YES!

Not only is it an exaggeration, but you have now revealed that it is a
deliberate lie!!

You said that there was QUOTE:

" Nothing but hatefull threatening letters."

Those are YOUR words, Tim!
YOUR Lie!

Did you read it THIS time?????

*** THICK AS A BRICK!! ***

OK, Tim, since you are SOOOOO incredibly dense, I will spell it out
for you.

You apparenly don't realize that WORDS HAVE MEANING!

You apparently are SO emotionally distraught that you do not realize
you are lying to try to over-emphasize (hype) your idea to us!

There were MANY, MANY non threatening messages!

There were even compliments.

There were requests for information.

Tim, you are behaving SO stupidly. Why don't you grow up and stop LYING to try to buttress your faulty position here???

There were no MEAN messages that I saw, and only a small number that said they would actually boycott Swatch!

Most of the messages I saw on there yesterday were just guys politely asking them to reconsider.

Please stop lying Tim, it make your bad reasoning look even worse than it already is, when you do that!

Of course your reply is in line with the rest of your posts, thanks for the spelling check, I suppose I could have spent the time that you did and made sure the comments were grammatically correct but I'm more interested in the discussion than poking fun at misspelled words which you seem to have mastered. I notice once again you come up short on answering the question. Do you have an answer or reply that might add to the discussion or do you just want to sling mud? You never really reply to the questions but rather write cute one liners like "quit while your ahead" and "Hewt on foniks werkt for me, Tym"

The question regarding Swatch was, considering the alternatives, that is, possibly partnering with Swatch to benifit them and the amateur community, what have we accomplished by attempting to stop the Swatch satellite project?

Yes that is correct, congratulations, you've correctly interpreted my statement this time without changing the meaning.
Cedric, why do you think we have organizations like AMSAT and the ARRL? In Washington, the ARRL speaks FOR us their comments carry a lot more weight and that's why you organize, I suggested that an organized reply to Swatch would have been more appropriate than the comments sent to Swatches web page and instead of commenting on the subject you bring up first amendment rights and the fact that we live in America. So instead of putting words in my mouth why not comment on my suggestion. Do you feel that AMSAT or the ARRL contacting Swatch directly and suggesting a win win situation would have been more appropriate and accomplished more for the amateur community, or do you think that the comments sent directly to the web page siting international law violations and threats of boycotting Swatch products were better. A simple question Cedric.

Tim

Really? I never mentioned not buying thier products in this post, I did talk about the posts by other amateurs boycotting thier products but didn't mention it with respect to the comments from AMSAT-F, only that they suggested a boycott.

The word Boycott, according to Webster

Boycott (boikot) v. To abstain from buying OR USING to express protest

AMSAT-F is discouraging listening to the satellite. Since the Satellite is sponsored by
Swatch that's a boycott.
You conveniently added (i.e not buy thier products), again I never said that.

> >Swatch may have indeed been contacted by AMSAT, but if they were nothing was made
> >public and the first comment's from AMSAT-F were to boycott Swatch.

Now if someone suggests to you not to listen to K-Rock, and you don't are you not boycotting the radio station?
If someone suggests you don't read the New York Times and you don't are not boycotting the newspaper.
If someone suggests you don't listen to advertisments from Swatch are you not boycotting Swatch?

> Sorry Tim. You fail again. The rest of us DO know how to READ and we
> spot your stupid human tricks very easily!

I just wonder about your comprehention. Tell me Cedric, by discouraging amateurs from listening to the commercials on the Swatch sponsored satellite are you saying that this is not suggesting a boycott? Again, just a simple question. Do you have an answer or more comments about lies and cover ups?

> Same tactic as you have used every day this week:
> 1) Time loses argument
> 2) Tim changes subject or lies to try to cover up.

Ha ha ha, this my favorite. When all else fails let's point out that the other guy is losing the argument, like everyone reading this can't decide for themselves and have to be told by you. har har har

Well, "Webster Junior", it is a LITTLE BUT HARD to USE something if
you don't POSSESS it or BUY it in the FIRST PACE!

Ha ha ha ha ha!

You lose again! You LIED when you said AMSAT-F had asked Amateurs to
boycott SWATCH.

You just don't have the balls to admit it!

Finally a sane voice in this absurd conflict. And from an HB9 in
Switzerland, no less!!

Thank you for bringing a voice of reason to an otherwise crazy
situation, to which a few hams choose to turn a blind eye.

Robert, you have spoken the truth!

Here is an update, and you can now see what the attitude of SWATCH
is about the whole thing:

THANKS TO ROB CARLSON for his excellent work on this matter.

Rob got the FACTS instead of just OPINIONS and GUESSWORK, which is
all that most of the rest of the radio amateurs appear to have
bothered to do, especially a certain person who has been making
strident comments and dishonest claims in this newsgroup.

Forwarded Bulletin follows:

Date sent: Wed, 7 Apr 1999
From: Rob Carlson
Subject: Swatch replies, disrepects the amateur community
Organization: University of Maryland Baltimore County

SWATCH PROTEST AND BOYCOTT BULLETIN
April 7, 1999 10:45 EDT
http://rob.carlson.org/swatch-protest

Since I released my first open letter concerning the Swatch "Beatnik"
satellite on ham bands, the response has been incredible. While I
can't
hope to duplicate the distribution of the first message, I'm sending
this
to everyone who took the time to send me an e-mail as well as all the
recipients of the first letter. This will also be posted on the web
site
for review by the hundreds of visitors who are showing up every hour.

My Swatch Protest and Boycott web site is the most up to date source
of
information on this issue, and I'm updating it constantly. You can
access
the site at:

http://rob.carlson.org/swatch-protest

This morning at 5:00 a.m. EDT when I checked the Swatch web page for
any
updates, there was a message from Swatch addressed to the amateur
community at:

http://www.swatch.com/beatnik/mission.php3?id=1

However, this message is not an apology or a promise. According to them,
the satellite will not be changed or disabled. Swatch has given us a single page response, and one rife with Swatch company "market-speak" and
self-gratification for this project. Frankly, their reply simply restates
and formalizes Swatch's indifference for the entire issue of amateur frequency allocation and ITU regulations.

I encourage everyone to view the full text of the message for themselves,
but I will highlight some parts in this letter. In particular they write,

"Thousands of people from all over the world have sent us their messages
of hope, peace and brotherhood, which have been transmitted to a satellite whose task will be to scatter them in space. Naturally, since
they are radio signals, they can also be heard on Earth on some frequencies in areas with satellite coverage. This means using channels
normally used by radio amateurs, which we consider as some of the major
exponents of the freedom of communication."

In case you didn't get that the first time, let me boil away the double-talk with my interpretation of Swatch's words:

"We think we are doing a good thing, and we needed some frequencies, so
we took yours. But since we're doing it for "hope, peace and brotherhood" and "freedom of communication", we didn't think you'd mind
and frankly, we're astonished you're making a big deal out of this."

All I can say to swatch is: Surprise! Amateur radio operators don't take
very kindly to attempts to hijack portions of our amateur spectrum for non-amateur transmissions, regardless of whether you're pointing a satellite at Pluto or the headquarters of the Federal Communications Commission building in Washington, D.C.

In their letter, Swatch writes that the only goal of the satellite is to
"scatter [the messages] in space," and that any of the signals which would
fall to earth would be an unintended consequence. Just one mouse click
away, however, on the page:

http://www.swatch.com/beatnik/mission.php3?id=3

they write that their use of the amateur frequencies will "[allow] radio-rads worldwide to listen to your voice." Radio-rads. Worldwide.
So which is the intended audience for the satellite? Space, or the "radio-rads" of Earth? Perhaps Swatch can clarify this contradiction.

Since I saw the reply this morning, the thought on my mind has been, "Wow,
we did it. Now what?" The question now is where do we go from here?

Both myself and Ron Hashiro, AH6RH, had anticipated that once Swatch understood the nature of the applicable international laws and the underlying spirit of the amateur space service, that they would rush to
cancel the project. However, this has turned out not to be the case.

Ed Mitchell, KF7VY, wrote to me yesterday that, "It is hard to imagine that during what must have taken six months or more of negotiations and
contract executions between SWATCH and the Russian Space Agency, the legal
issues of this never came up. They had a lot of time to understand the issues." Now it's obvious that the issues were understood, and ignored.

A single sentence paragraph in Swatch's letter to amateur operators reads,
"It is a great opportunity for Amateur Radio to gain an even wider audience." That's all well and good, except this morning's letter is the
first mention that the Swatch company has made of the amateur community
since I first visited their web site on February 20, 1999. If amateur radio operators had not responded with such dedicated ferocity over the
last four days, I don't believe that Swatch had any intention of including
the amateur community in their Beatnik marketing campaign.

If Swatch continues to be so cavalier and unapologetic over their use of
the amateur spectrum, it's clear that official action will have to be taken in order to prevent future abuses by their company, and others who
might follow their lead.

Andrew Reynolds, WD9IYT, believes that the most effective step is to directly file a formal complaint about this illegal operation with the ITU
via the FCC. They might not be able to fine Swatch, or the Russian space
concern that is helping them, but they inquire with the respective governments, and make them pay attention to this issue. He says that

"A
boycott of Swatch products would be a non-event if it is only hams
(remember, there just ain't that many of us), and writing them
nastigrams
is something that they're probably going to just ignore. Smack' em
across
the face with a government enquiry and they're gonna wonder what hit
them."

Tony, K4KYO, also suggested writing letters to the Swiss Embassy in
Washington, DC, quoting applicable regulations and ITU treaty
provisions
protesting the misuse of the ham bands for commercial purposes. I
have no
specific information or addresses for the Embassy, but if anyone does
please send them to me at rcarls2@umbc.edu.

Ed Mitchell, KF7VY, has detailed the ITU violations on his web site:

http://hamradio-online.com

and writes, "The ITU has a prohibition on third party traffic (except
where agreements exist between countries) of the type planned by
SWATCH,
regardless of whether it is commercial or not, in nature. Even if this
were to be turned into non-commercial messages, the use of Amateur
satellite and Amateur frequencies in this manner is clearly beyond the
realm of reasonable."

"If SWATCH can set up an ad campaign around this theme, and, SWATCH
can
use Amateur frequencies to transmit non-commercial messages as a
matter of
"Good will" - where does it stop? Imagine if other companies adopt
this
scheme - collecting non-commercial messages in association with the
marketing of a new product and transmitting them from satellite . . .
In
effect, Amateur satellite frequencies can be legally commandeered for
use
by corporations engaged in bona fide marketing activities. And that
would
be the end of the use of Amateur satellite frequencies by Amateurs."

Ron Hashiro, AH6RH, writes, "The actual on-the-air activity is a third
party traffic that has one requisite word within the message content."

"However, the word (a registered trademark) and what it supports (as
revealed by the current web and marketing campaign) supports a
financial
interest that is advanced by a message given on-the-air within the
amateur

radio service, which violates the SPIRIT of the ITU rules. One would never expect this type of activity to occur on any amateur radio band anywhere within the world."

"More importantly than just the on-the-air activity, it diverts the voluntary efforts and unpaid contributions of many amateurs into an effort
that they were not aware would have an immediate commercial outcome which
violates the above spirit of ITU rules. I believe these licensed amateur
technicians/operators have strong feelings about the project as originally
conceived as they would not willingly advance a commercial venture with a
trademark message that is being sent on-the-air."

One suggestion I have received is to begin other amateur operations on the
Beatnik frequency of 145.815 such as digipeaters, beacons, and simplex communication. Remember that as far as FCC and (I believe) ITU regulations are concerned, unlicensed operations on the amateur frequencies have no rights as far as use and interference complaints and
are essentially non-existent.

However, I can't endorse this course of action since the impact on other
frequencies in the amateur satellite portion of the two meter band isn't
really certain, and I doubt that Swatch is too concerned about if anyone
actually hears the message, as long as they're thinking about Swatch all
the while they're trying.

Other suggestions have been similar and include overloading the satellite
uplink. I've been told that the actual makeup of the satellite digital
audio circuit is almost identical RS-17 and RS-18. In my first alert message, I misunderstood the following quote from an AMSAT bulletin:

"Up to ten messages will be transmitted by the tiny, battery powered satellite. Each message will be 7 seconds long and include a 7 second pause."

Now I realize that it referred to ten total pre-recorded messages on the
satellite, and that the satellite could be programmed to cycle through these ten messages by changing to another one every 24 hour period. There

is no uplink frequency because their is no uplink, and the satellite cannot change or remove the messages at any time during the operational
life of the unit. I apologize for the confusion.

At this point my opinion is that we should try one last time to encourage
Swatch to do the ally themselves with the amateur community. The following suggestions come again from Ron Hashiro, AH6RH, on the steps that we should tell Swatch to take:

* Immediately communicate to AMSAT-FR and the amateur community that it
now understands the full magnitude of the spirit underlying the applicable
international law and is willing to remedy the situation by modifying the
project, with AMSAT-FR's approval.

* Would like to reposition the project in part as a corporate sponsor of
amateur radio and the amateur radio space service. (It may also find other adjoining ways to reposition the project appropriately.)

* Acknowledge and thank AMSAT-FR, other AMSAT type organizations including
AMSAT-Russia and the amateurs that makes amateur radio satellites possible.

* Obtain assurances from the Russian agency that it would not solicit future corporate clients in the previous fashion that would expose future
clients to adverse public reaction.

* Publicly thank the Russian agency for their part in making the "revised" project possible.

* Update their web-site and marketing campaign accordingly.

* Acknowledgement by all sides that the lesson learned is that the message
content of an on-the-air operation within the amateur radio service should
not advance the financial interests of commercial companies.

73 and good luck,
Rob Carlson, KC2AEI

Ponder this for a minute, Robert. Who does the satellite belong to ?
And who launched it ?

If the pizza store up the road paid me $50 to advertise their pizza
on a VHF repeater, and every 5 minutes I announced on the VHF
repeater "THE PIZZA STORE UP THE STREET HAS GREAT PIZZA -
CALL THEM AT 555-1212 FOR FREE DELIVERY", who will the FCC
issue the violation notice to, me or the pizza store ?

Hello AMSAT Russia.......

> If you bothered to read the Swatch site you would know they don't plan to transmit
> ANY ads.

What about the endless HI HI from Musat and some other inane amateur spams that everyone seems so proud of. This project may be beneficial by creating interest in the hobby among a much wider group than is usually reached. I know a number of people who got excited about amateur radio and satellites after hearing the first Sputnik40 replica on scanners.
A few arrogant individuals seem to think they own the airwaves just like the internet hackers who think they own the net and slowed it down when one of them got jail time.

"Jamming" this project in any form is a very "low brow" response. Who gave you the right to speak for everyone.

Jamming the project in any form is arrogant, and far more unethical and counter productive than the "perceived" intrusion into the space that a few amateurs seem to think they own personally.
The same bigoted attitude of the CB world has moved to space. The sputnik replica may bring a number of new people into the hobby. The threats against it are degrading to everyone associated with amateur radio. They make us all look very bad. Of course Musat and the other Sputnik replicas were not spam, uh, right? How much has amsat France paid to launch "their" satellite?
Get your facts straight before making threats.
See ya on down the road jack_ _ _ _'s

I have had the misfortune of watching ARRL as a member for a decade now.

ARRL is pursuing a typical party line. While there must not be profane, political or blatant advertising messages, God forbid some undesirables (read that as hams under 30) be attracted to the HOBBY. And that's what it is- a HOBBY.

ARRL has an unspoken agenda to not advertise the hobby in public. SWATCH violated this. ARRL advertises for new hams in QST ! Who gets QST ? ARRL members ! And don't sell me that newsstand BS, read the USPS release in QST, no one gets it that way. So who will ARRL attract ? Friends and relatives of hams.

This isn't surprising as that's how ARRL hires. Check out December 1998 QST and see who works there. Relatives, friends and contester friends. The Carcias, 3 Wolfgangs, N1DG, KB1HY, K1ZZ, N1RL, KB1BE, the list goes on. Anyone who doesn't fit the above category is given the 5th degree before being hired, to the point of harassment. Superior education, achievement and experience are nothing, who you know in YCCC or PVRC is everything.

Anyone who criticizes this (literal) Old Boys Club gets summarily dismissed, ridiculed and in many cases blacklisted.

But experience is the best advertiser. I have had 2 interested professional, educated parties ask me about ham radio. I told them the above and the direct and veiled ridicule of small stations by obsessed nutcase hams. I spoke of outrageous stations and dangerous RF power like K1ZM, W4ZV and W3LPL. These people spend money on attorneys fees and WASTE THE COURTS' TIME so they can put up not one, but multiple towers in excess of 150 feet because the 50 or 75 feet towns offered them won't do ! COMMERCIAL STATIONS WITH A QUARTER OF THE DIRECTIONALITY OF THEIR ANTENNAS AND ERP ARE REQUIRED TO HAVE RF WARNING SIGNS !

Would K1ZM live next door to himself ? Does the cost of a Mercedes S class sound like an investment you'd make in ham radios ? I told them my personal dealings with the many nosey hams on VHF, many if not most of whom are in reality antisocial freaks whose last hope for friendship is others like themselves. The 2 walked the other way from the hobby.

Yes, Virginia, revenge is sweet.

> And who launched it ?

The satellite fas built by amateurs and therefore belongs to them.
The russian space agency launched/will launch it and may have a
contract with AMSAT to use it for ballistic experiments. (In that case
this is a win-win situation for AMSAT and SCSC). This gives SCSC by no
means the right, however, to sign a commercial contract with anybody
and abuse amateur radio frequencies to transport unlicenced or even
commercial messages.

> If the pizza store up the road paid me $50 to advertise their pizza
> on a VHF repeater, and every 5 minutes I announced on the VHF
> repeater "THE PIZZA STORE UP THE STREET HAS GREAT PIZZA -
> CALL THEM AT 555-1212 FOR FREE DELIVERY", who will the FCC
> issue the violation notice to, me or the pizza store ?
>
> Hello AMSAT Russia.......

In that case they would issue it to You, because You agreed to
transport that message. AMSAT-R never has signed a commercial contract
with Swatch, this was (illegally) done by some members of SCSC. In
that case it is SCSC and/or Swatch, which will get into trouble.

Yes, it sounds as if your very existence is a bit of a "misfortune". - You sound pretty miserable to me.

Fact is, the ARRL does a lot of good. Sure there's a few bozos in there, but overall the ARRL appears to be made up of pretty decent folk. The ARRL is not perfect... Surprise surprise! Most adults can handle realities like that without throwing a hissy-fit, and getting their panties in a twist.

I think you're full of farina, right to the brim.

Jim,

On many (maybe most?) issues I agree with your views because you have a
well-developed ability to cut through the peripheral crap, and get at the
real nut of the issue. In this case, I think you've missed the real issue.

This is not about some bootlegging scofflaw in a SE Asia rain-forest;
it is about a deliberate and well financed commercial promotion by
an international corporation arrogantly using the amateur bands to
advance their pecuniary interests.

K1ZZ, in a fax to the CEO of Swatch, got right to the *real* issue
her. He said:

"While it could be argued that a single, limited-lifetime satellite
would have a negligible impact on the usefulness of the band for
amateur pursuits, if commercial satellites were to become more
common the interference would be intolerable. Therefore, the
amateur radio community must stand against the "beatnik" satellite
because it represents such an undesirable precedent."

You haven't thought this through *at all*!

The satellite, except for the fact that it will transmit in the 2-meter band, has nothing to do with amateur radio! It is part of a marketing promotion campaign by an international corporation intended to advance their pecuniary interests. I firmly believe that the amateur radio service and the amateur satelite service must scrupulously avoid *any* entanglements which advance the pecuniary interests of any commercial company, no matter how "benevolent" they may appear. (And the releases so far from Swatch do not seem benevolent at all, but rather quite arrogant.)

Jim's point is valid. We have to look at this violation in the light of all the other dumb violations we hear every day.

SWATCH should have known better than to try and sneak this on to RS19, the French AMSAT folks should learn to read contracts better, and the Russians, well the Russians are hungry. What do you expect?

In the scheme of the things we hear every day, this ain't much.

Think about those illegal 10 Meter taxi cab operations on converted CB radios in NY, think about those spy stations, how about all the South American operations you hear that can't possibly be ham radio related?

The folks you should really get mad at are the very people who made your appliance radio. Do you really think they sell exclusively to ham radio operators? Do you really believe that when an insurrection takes place, or in a place where laws aren't enforced, that the folks out there are ignoring a cheap source of radio communications equipment?

Of course not!

So SWATCH decides to carry out an Advertising campaign on the ham bands. Maybe we can petition the Swiss Government to slap these folks on the wrist and tell them not to do it again. That's about all you can hope for ladies and gentlemen.

The reality of international allocations of the radio bands is that cooperation is usually more profitable than confrontation. However, no country cooperates just for cooperation's sake. If there's a motive or profit to be made by breaking international law, most countries won't hesitate.

Maybe we need to recast the hobby in such a way that international motives are better aligned. Maybe we should allow for this sort of thing in return for something, such as better funding of future satellites.

Think about it. Think hard. Then try posting a message. I'd like to see something intelligent come from this debacle.

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Enric Fraile Algeciras
Location: Paseo Bonanova, 8 Barcelona (02 07'E, 41 24' N)
Frequency: 48.24715 MHz.
Transmitter Location: still working to identify, possibly South German C2,
100 kW, horizontal polarisation)
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
astronomical azimuth 215 deg (=NE), elevation 0 deg.
Antenna: Six element Yagi 617-6B, 14 dBi gain, horizontal polariz.
Azimuth 200 deg (NE), elevation 20 deg
Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
10 dB attenuator in the receiver to reduce direct reception
Sensitivity: 0.25 uV for 10 dB S/N
Observing method: the audio signal of the video carrier is received using
a narrow CW filter (500 Hz) and fed into the PC in real time.
Data sampling system: using a super 14 bits A/D card to PC/XT
and "Data Capture" software with 1 second/18 sampling interval
to store all the > 0.5 s reflections.

Notes:
. ? possibly interference
. problems in processing the data between March 10-17

Enric Fraile Algeciras

--------------------------------------------------------------------------
Observer: Michael Boschat
Location: Halifax, Canada (63 36'W, 44 39'N, 58 meters above sea level)
Listening Frequency: 83.25 MHz
Receiver: Icom R-10
Antenna : resonant dipole
```

Antenna Direction: Horizontally polarized with lobes in E-W plane, elev 0 deg
Filter : high-Q (Q at least 300) bandpass filter between antenna & receiver.
Listening Mode: AM
Recording method: listening by ear

March 1999

Notes:
. no corrections for radiant position made to the counts.
. (-) means no observations made.
. * = Interference
. filter frequency re-adjusted (drifted off by 30 kHz)

Mike Boschat

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.47 Viesintos Lithuania 12 05h00-22h00
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 04h30-22h00
Antenna: crossed Yagi (x form), 4 elements, astronomical azimuth 270 deg
(= E), elevation 27 deg.
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB.
SWR of antenna alone at 66.5 MHz: 1.4/1 (good to very good),
measured with MFJ/259P SWR analyzer (HF-VHF 1.8 MHz to 170 MHz)
on Sep 28, 1998.
Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and

Windows available].

March 1999

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

```

Notes:
. further hardware modifications:
- March 5: filter between receiver and power supply (will still be moved to between antenna and antenna amplifier)
- March 21: low pass filter between receiver and A/D convertor.
. ? probably affected by sporadic-E, tropo, direct reception.
. * warning for relative high number of long duration reflections, an indication for potential stream activity.
. local time = UT + 1 hours until March 27,
summer hour from March 28 onwards (local time = UT + 2 hours)

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)

Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightning, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

. activity period of streams with radiant at 45 deg elevation:
DLE: Delta Leonids
PYX: Pyxisids (Exploration)
LEU: Leonids-Ursids
GNO: Gamma-Normids
VIR: Virginids
**: Possible enhancement

Will Kelsey

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 2 element Yagi, direction southeast, no elevation at 1m height.
Receiver: IC-706 at 53.76065 MHz, CW-R mode, 500 Hz CW filter, fast AGC.
Transmitters: 1) 30 kW TV video carrier from Bari, Italy, distance 700 km,
direction south and 2) a 30 kW TV video carrier from Sicilia,
Italy, distance 900 km, south. The total echo power of both
transmitters is processed into same 40 Hz virtual
receiver channel.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record
the audio signal. 20 channels of 2 Hz width are used for meteor
identification, another channel is used for automatic
interference rejection. Sampling interval: one 4096
point FFT every 0.5 seconds.

The monthly results are now also available at http://www.qsl.net/oe8fnk

The meteor counts below are corrected for a full hour observing time. If
the recording duration is 20-40 minutes, a dot is shown after the value, to
show the reduced accuracy. Results for less than 20 min. observing time are
excluded.

Counts of reflections longer than 3.5 seconds.

| Mar 1999

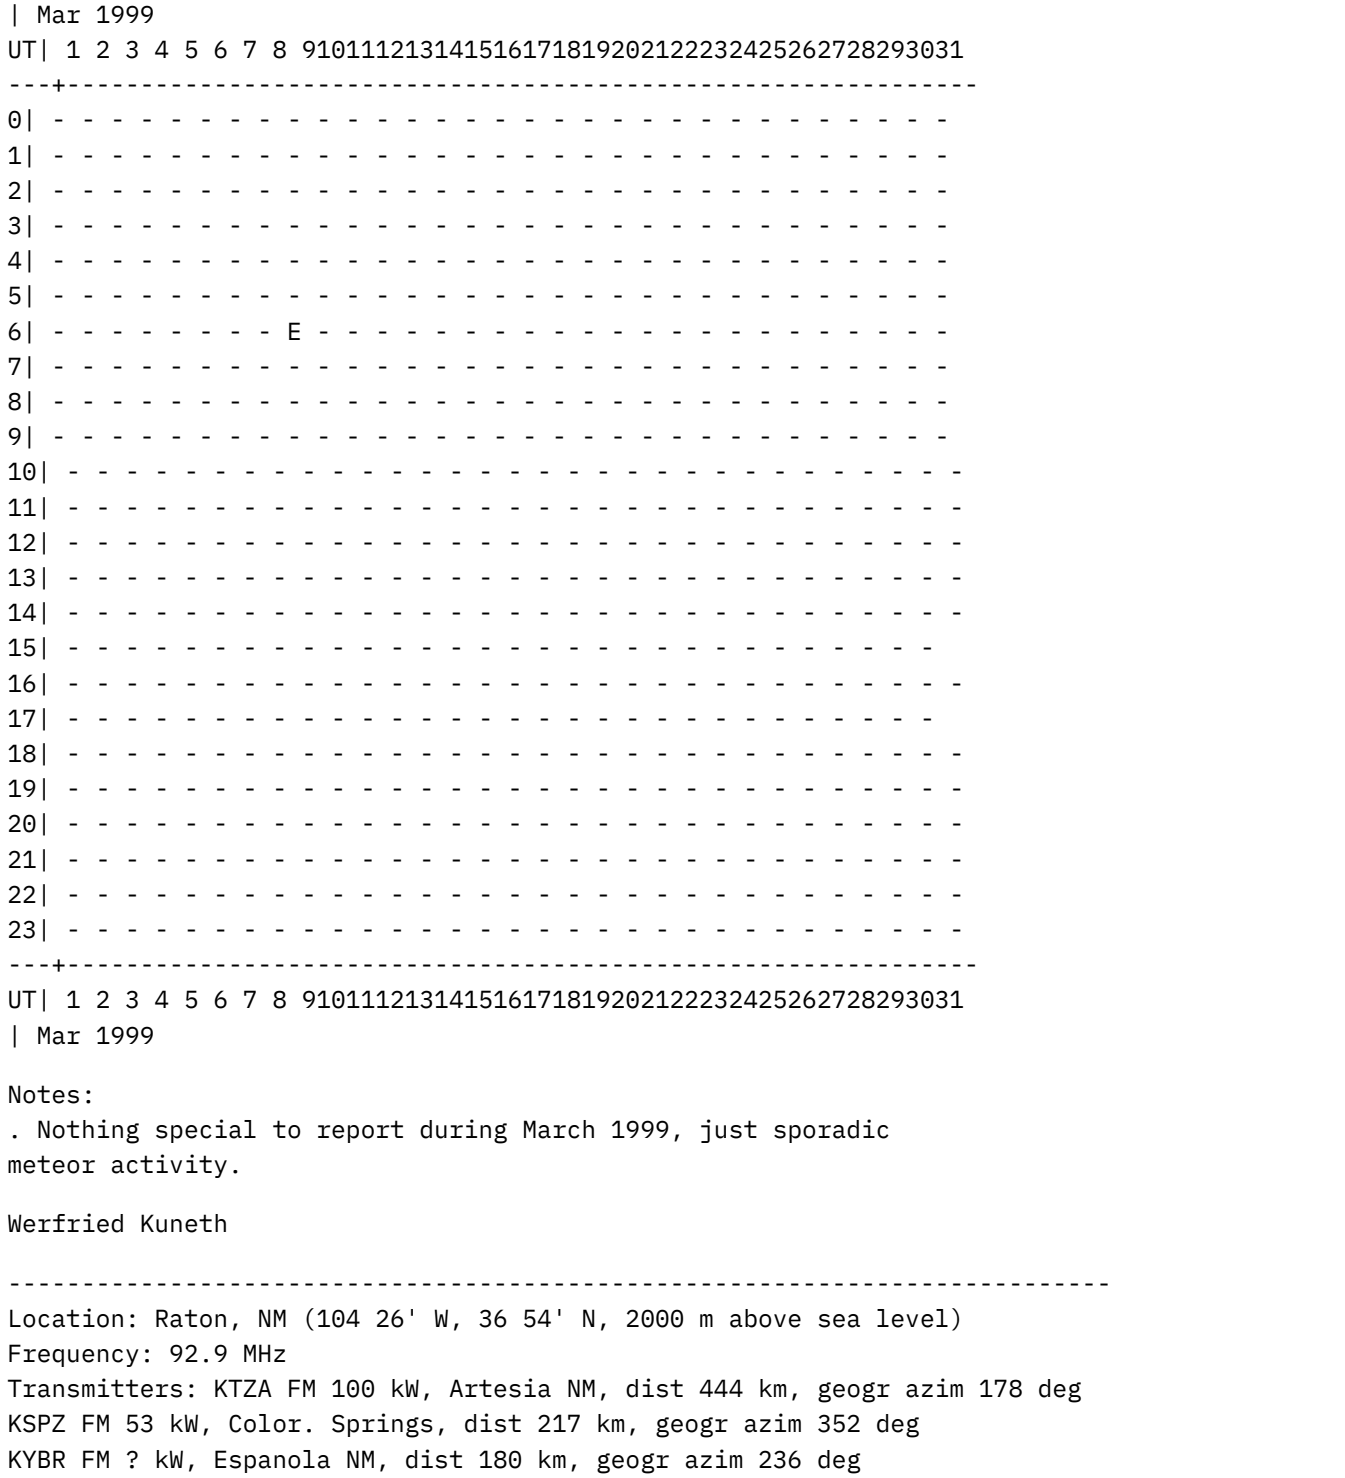
Propagation overview for March 1999

E : sporadic-E or E-layer propagation
F : FAI (field aligned irregularity)
- : propagation only via meteor echoes.
(blank) : no data available



Notes:
. Nothing special to report during March 1999, just sporadic
meteor activity.

Werfried Kuneth

Location: Raton, NM (104 26' W, 36 54' N, 2000 m above sea level)
Frequency: 92.9 MHz
Transmitters: KTZA FM 100 kW, Artesia NM, dist 444 km, geogr azim 178 deg
KSPZ FM 53 kW, Color. Springs, dist 217 km, geogr azim 352 deg
KYBR FM ? kW, Espanola NM, dist 180 km, geogr azim 236 deg

???? FM ? kW, Juarez Mexico, dist 579 km, geogr azim 198 deg
Antenna: folded dipole, on 6.3 m high mast, oriented N-S
Receiver: Subaru 12 V DC car radio with digital tuning
Observing method: conditioned audio input in the game port of an IBM 386 SX-50 PC, 128 samples/second, DOS/Basic software

Total hourly counts

Notes:
. increased sensitivity from Feb 13, 23h UT, by better matching the
antenna-coax impedance.

R.B. Minton

Observer: Sadao Okamoto
Location: Damine Meteor Observatory, Japan (137.53 E, 35.07 N)
Transmitter: HAM beacon (JA9YDB) for RMO (50 W CW, 53.7500 MHz) by
JA9BOH Kimio Maegawa. No modulation except for identification.
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith. Omni-directional
in azimuth and elevation above 15 deg elevation.
Location: Fukui-NCT at Sabae city (136.2 E, 35.9 N)
At present time about 10 observers are listing for
Kimio Maegawa's 53.75 MHz beacon.
Receiver: IC575
Antenna: 2 element Yagi, pointed to the zenith.
Observing method: FFTDSP software, manual count.

Hourly echoes over 10 dB SNR

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

Martmn Semegone is a member of the "Asociacisn Argentina Amigos de la Astronomma (AAAA)" in Buenos Aires, Argentina and works in the Radioastronomy department. They have formed a group to study meteors using the forward scatter method, meeting every Saturday to study about meteors (currently reading Meteor Science and Engineering by Dr. McKinley). They have made a receiver, and are currently testing it.

You can contact them about following Win programs to collect data and study meteor reflections:

- vismetig.exe (English version) displays and allows easy browsing of one byte data stream files (such as the Prometeos format of the University of Ghent).

- gram.exe (Spectrogram 2.3, freeware by R.S. Horne) is a simple but efficient FFT program reading .wav files.

R.B. Minton's FM radio meteor (RM) system went into full-time operation just two days before the 1998 Leonids peak - after one and a half years of tweaking the hardware and software. His software includes several features to reduce slow-varying noise level, sporadic-E and aircraft flutter. The original RM data are stored on disks.
He is currently the Acting Coordinator for the ALPO Instruments Section.

Looked at the latest Space News and didn't see anything about AO-10. Couldn't hear a beacon or get a signal back from it at 6:00 PM CST today. I haven't been on the air in over 8 months and don't know what sats are now active. (My KEPS are current.) Is anyone using AO-10 or AO-27? Are they still alive? ....Never mind about PH3D. I just want to forget it.

AO-27 is very active, AO-10 is, from what I understand, is somewhat useable.
I'm sure there are others that can comment more about AO-10. AO-27 continues
to be a fun and educational satellite to work and I look forward to it
coming over every morning.

That is a rather pompous attitude. Since my views don't completely agree with yours, I haven't thought this through? Well, hurl barbs if you must, but it doesn't make you right, and me wrong. This entire episode is wrought with gray area.

> It is part of a marketing
> promotion campaign by an international corporation intended to advance
> their pecuniary interests.
>
Hans, I guess the point you're trying to make is that Swatch has a pecuniary interest in the satellite, hence they broke ITU laws. Well, pecuniary, in legal and ITU terms means that a fee has been paid for a service. Swatch wasn't paid for a service, so your statement is wrong.

IF the Russian Space Flight Control Center (SCSC), and Vladimir Solovyev or Serge Samburov made any deal involving a fee over and above underwriting costs of the launch and associated activities, then THEY have a pecuniary interest in the satellite, and have broken the portion of ITU laws of which I think you were trying to articulate. Since satellite launches and all the associated peripheral costs amount to millions of dollars, even a court of law would have a hard time determining Swatch did any more than underwrite the launch. Do you have any proof of a pecuniary fee paid?

> I firmly believe that the amateur radio service
> and the amateur satelite service must scrupulously avoid *any*
entanglements
> which advance the pecuniary interests of any commercial company, no matter
> how "benevolent" they may appear. (And the releases so far from Swatch
> do not seem benevolent at all, but rather quite arrogant.)
>
Entanglements is a fairly subjective term. I firmly believe that a symbiotic relationship with the private sector may well be the salvation of the amateur satellite program. Again, and if you'd have read my entire post, you might have seen what I was talking about. ANY relationship of this sort must be done through the proper channels however, and be a fair balance of good taste and adherence to the ITU regulations.

73, Mike

I don't really believe that, Hans. How many companies like Swatch
would buy into 'illegal' world wide advertising ? I would bet they had
no idea what ham radio was when they signed the contract with the
Russians.

I see the entire deal as grossly insignificant. What saddens me
the most is that again we have proven that we are totally incapable
as a group of responding intelligently to a common threat.

snipThere's the rub. I see it now. It used to be a SERVICE. We got to play with our radios, and many genuinely "advanced the radio art" while we payed for the frequencies by providing communications when called upon. This still happens. I took my general exam in April of 1964 in Dallas after a bus ride from Waco. I was 14. You could NOT study the question pool back then. Extras drew schematics.
If it's now just a "hobby" that is a great loss.
H.
WA5IGW
By the way, when I took my 1st phone (remember that?) in 1971, I made 100%.
First try.
I added the Advanced Amateur Radio then for the hell of it.
Gotta get that 20 WPM

You idiots don't seem to realize that Swatch is making monkeys out of you by letting you post all your threats and spew on their comments page. When any unbiased person looks at that page who do you think they will see as wackos, Swatch or the HAM's who leave threats, spam, and abuse in their public posts.

Also, we went through this argument years ago when public broadcasting started taking commercial funding. It helped public broadcasting without compromising their ethics or freedom and you don't see blatant advertising on PBS.

NASA has nothing to do with it ... the Russians transported
the satellite to their MIR space station and are planning
to launch it by tossing it away during a space walk.

The fact is that it's up there and I don't think that with the current political situation the Russians are going to bow down to a bunch of predominately American whining amateurs. there will not be any fines or sanctions because everyone knows they would retaliate and it would turn into a tit for tat game and it's not worth it. I also think that it is completely out of the hands and beyond the control of Swatch. I will bet they couldn't stop it now if they tried, maybe they have tried, who knows.

Why would swatch spend the money to launch a sat for only 30 days? What are they trying to accomplish. If they wanted me to buy their watch help put the Phase 3D in orbit. I think, based on rational business sense, that this is non-sense! So what is their ultimate goal, surely you would agree that it would not sell more watches nor would it decrease the cost of the watch so why do it? My pessimism tells me that this along with the recent FCC rule making that something big is up. Let's see what the LEO industry is doing right now. If you put a bird in space it will occupy that space for a long time, just ask NORAD. Maybe the 30 days and the commercialism is a smoke screen designed to divide and conquer. While they (Swatch) take dibs on their orbital elements. This may sound paranoid or like some sort of conspiracy theory but we need to beware of marketing free bees because nothing is for free.

wrong.

Mike you have made it obvious WHO isn't thinking here!
You don't understand the word "pecuniary."

It refers to GAINING money, not PAYING money!

Try again!

(Bravo Hans!!)

Cedric, Cedrisson, 4-1000 or whom ever you are today. Your comments seem to get more and more bizzarre, I suppose if a group chooses to boycott a radio station and not listen to it, it's really not a boycott according to you since you don't possess the radio station or choose not to buy the radio station? Now that's funny.

If a group decides not to watch a particular news network and discourages others from watching is that not boycotting the network? What would you call it? I'm dying to know, but I doubt you'll answer. As far as balls go, I didn't know whether or not you have them had anything to do with debating an issue, but I suppose that's all you have left to share on the topic. One question though, how big do your balls have to be to post from an anon email account?

> who has condoned it like an oaf!

So that brings us back around to the point I made early in the discussion, since AMSAT-F won't share exactly what the messages are and since no one knows exactly what was going to be transmitted how do you know they were breaking international laws? I'm not condoning anything, I was debating the interpretations of the regulations which you seem to have a problem understanding, and since I question the interpretation you make comments like "If it's illegal Tim's for it!" and assume I condone what Swatch is doing. I suppose if I question the Constitution of the United States I should be hung for treason eh?

By the way, are you totally unable to discuss an issue without name calling? You seem unable to post without calling me a liar, an oaf, and running spell checks on my posts. I bet you were the pride of your college debat team.

Brian,

For some reason there seems to be some misunderstanding here. Let me try to clear this up.

Brian Carling wrote:
> Mike you have made it obvious WHO isn't thinking here!
> You don't understand the word "pecuniary."
> It refers to GAINING money, not PAYING money!
> Try again!

Let's lay down some facts which will help clarify the issue. Both ITU regulations, and in the US, FCC part 97 rules clearly put the onus on the CONTROL operator. The control operator is NOT Swatch. The control operator for this device is the Russian Space Flight Control Center (SCSC), and Vladimir Solovyev or Serge Samburov. If there is proof any of these entities accepted a FEE for operation of this satellite, then THEY have broken the law.

Here are abstracts from the ITU regulations pertaining to the language in question:

Article 1 - Terms and Definitions
Section 3.34 Amateur Service:
A radiocommunication service for the purpose of self-training, intercommunication and technical investigations carried out by amateurs, that is, by duly authorized persons interested in radio technique solely with a personal aim and without pecuniary interest.

And the way our FCC interprets the ITU regulation, in part 97:

97.113(a) No amateur station shall transmit:
(1) Communication specifically prohibited elsewhere in this Part;
(2) Communication for hire or for material compensation, direct or indirect, paid or promised, except as otherwise provided in these rules.
(3) Communication in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer. Amateur operators may however, notify other amateur operators of the availability for sale or trade of apparatus normally used in an amateur station, provided that such activity is not conducted on a regular basis.

I think. I react. However, I try to react in a calculated thinking manner, which apparently, many amateurs have not, gauging by the responses here and on the Swatch site. I am an avid satellite operator, and have a top notch, fully automated, world class station, of which I am the control operator. I am not some troll who has crawled out of the

woodwork to rant and rave and spam a corporate entity, which in all likelihood COULD have been an ally of the amateur satellite program. Instead, a bunch of hostile actions fomented by a batch of incomplete and inaccurate data has ruined any such chances.

For the record, I am NOT for blatant commercialization of space and the satellite program, but feel some of us have to be the voice of reason in an increasingly hostile conflict.

73, Mike

Now that I have your attention, it does seem he has a problem with international treaties.

Of course, I have wanted to test the fan on my 2m rig on air, under real world SWR to see if it works, and my satellite tracking software is often unreliable, at best.

SWATCH's response makes it sound like they only want to help give everyone a voice and equal access under law to ham frequencies, God knows we are pigs what with hoarding those 30 MHz out of 55 GHz to ourself !... Seems it should've had a CB Radio giveaway sweepstakes then.

I guess I have to clarify my last comment. It was supposed to be a joke. I know that this is serious, but you have to admit that the blaming and yelling isnt going to stop swatch from doing what they are doing. Question is what are we going to do about it. Who do we contact? Who can take action to prevent this from happening again. Thats the answer I am looking for.

I didn't say they have a pecuniary interest in the satelite.
I said they are using amateur radio frequencies to advance their
own pecuniary interests. (Blow the dust of your 'Funk and Wagnalls'
and look up "pecuniary".)

>Well, pecuniary, in legal and ITU terms means that a fee has
>been paid for a service.

That's only a narrow part of the meaning of "pecuniary interest".
If I own a grocery store and run a contest on my 2-meter radio to
promote my grocery store, that constitutes using my radio for my
pecuniary interest. Nobody has paid me a fee, but I damned sure
am violating the regulations by promoting my business on amateur
radio.

Swatch is using amateur radio as part of a marketing campaign to
to promote their business. That constitutes a clear violation of
the prohibition against using amateur radio for pecuniary interests.
That rule lies at the very bedrock of amateur radio, and if it is
eroded, then our service will disappear before your next license
expiration.

>Swatch wasn't paid for a service, so your statement is
>wrong.

Nope. I'm correct. Swatch is using amateur radio to advance
their business goals. That is a violation of the rules, pure
and simple.

73, de Hans, K0HB

Lawrence of Arabia was in the 'Great War' - 20 years before RV2,4P700
(and RV12P2000 appeared around 1938-39) which was used in the "bad
war", domestic battery valves were DF11, DAC25 etc
Tsch&#65533;ss.....

The ARRL, NCI, and other ham organizations have protested to
Swatch and are continuing a dialog with Swatch in an attempt
to persuade them that it would be counter-productive to their
interests to proceed.

It is not at all clear that this has had the desired result,
at least yet.

For info, you can check out the article and links to other
information at http://www.nocode.org/articles

Hans, this isn't intended to flame so don't regard it as such but if this is true are Kenwood, Yaesu, and Icom in the same boat when they donate amateur gear to DX'peditions, seems like they are certainly� using amateur radio as a marketing campain when they support such operations, whats the difference? The station will no doubt identify what the gear is and later the ham mags pick up the story and show thier gear that was used.

Clay,

Canter and Segal were the originators of commercial spam on the Internet, right? They had some sort of scam where they were supposedly helping aliens get US green cards. Green backs for green cards. Their spam filled volumes; the protesters SPAM filled rooms! If it's of questionable digestibility, it's SPAM.

Dear Swatch AG:

I object in the strongest possible terms to your use of the amateur radio service for promotional activities. My wife, in common with a lot of people of her age, is 39. For how long are we to put up with these things? I myself am nearly 35 and am quite mad, but I do enjoy listening to the BBC World Service. If this project goes ahead unabated... Pearl Harbor... dark days of the war... Teapot Dome scandal... Rosenbergs... Watergate... young hippies roaming the streets, raping, broadcasting on ham satellites,looting, killing. Why can't you do something morally uplifting, like promote the human body? There is nothing embarrassing or nasty about the human body (except perhaps the intestines and the bottom).

Yours, etc.

Steve Johnston (Mrs)

But it's not illegal until they do it on the air. Almost all companines building/selling ham related equipment etc. have marketing campaigns to promote their business.

: > That constitutes a clear violation of
: > the prohibition against using amateur radio for pecuniary interests.

Nope, see above.

: > That rule lies at the very bedrock of amateur radio, and if it is
: > eroded, then our service will disappear before your next license
: > expiration.

Then National, Hallicrafters, Sonar and all the other past and present ham radio companies should have caused amateur radio to disappear long-long ago.

: > >Swatch wasn't paid for a service, so your statement is wrong.

It seems that Swatch is going to use an amateur frequency to -directly- promote their company in some way or another though. That's the difference.

: > Nope. I'm correct. Swatch is using amateur radio to advance
: > their business goals. That is a violation of the rules, pure
: > and simple.
: >
: > 73, de Hans, K0HB

The term "business goals" isn't quite correct. -If- Swatch directly promotes themselves or something on the air that they can make money from, then they would seem to be in violation of the rules. But a radio company having a radio club (or a ham store having an amateur station available for use by hams) isn't necessarily violating any rules even though it might advance their business goals by influencing "users" to buy that companies amateur equipment (as long as they aren't on the air promoting some sale etc.).

: Hans, this isn't intended to flame so don't regard it as such but if this
: is true are Kenwood, Yaesu, and Icom in the same boat when they donate
: amateur gear to DX'peditions, seems like they are certainly using amateur
: radio as a marketing campain when they support such operations, whats the

: difference?

See above.

In DX'peditions, the manufacturers aren't using the equipment to promote some gimmic that brings attention to the manufacuter and it's products. A licensed ham is using the equipment for amateur activities.

: The station will no doubt identify what the gear is and later
: the ham mags pick up the story and show their gear that was used.

Nothing wrong with an amateur mentioning what equipment he is using. It's done all the time. Pictures of ham's stations showing the various equipment are frequently on the covers and in articles in QST & CQ.

But if an amateur owned a radio equipment store and started promoting some gimmic on ham frequencies that brings attention to his store then he's crossed the line.

That may be the case of Swatch, depending upon what they actually DO.

: Tim ka8ddz

Swatch seems to be claiming that they are going to "help" amateurs by providing some sort of "time service" (as long as the persons message mentions "beat...."). I guess they never heard of worldwide time services (like GPS etc.). Rather strange for a "clock" company.

I wonder how they set *their* clocks before they got a primary standard? Why they think they can justify this "gimmic" on amateur frequencies as "helping" hams and "other" listeners is a real stretch. Somehow I just don't think of tuning to 2 meters when I want to set my clock ;-)))

It's an advertising gimmic pure and simple. (That'sa illegal on ham freqs.)

Tim ... it only happens rarely, but I have to agree 100% with Hans on
this one ...

The difference is that Kenwood, Yaesu, and Icom understand the
amateur regulations and don't ignore them by commissioning broadcasts
of third-party commercial messages on amateur frequencies.

If Swatch had not contracted with the Russian space agency to pervert
this satellite from being an educational hamsat into its own private

commercial beacon in our 2m satellite band, but had, instead, simply
donated some money to support the satellite's intended use, had some
promo pictures taken of their president handing a check to someone
from one of the AMSAT organizations, and maybe even put a "Swatch"
logo sticker on the outside of the satellite, there would be no controversy.

Howver, that is NOT what Swatch has done ... they HAVE perverted
this satellite from being an educational hamsat into their own private
commercial beacon in our 2m satellite band. This is totally contrary
to the ITU Radio Regulations in several respects ... it violates the
non-commercial use of ham frequencies ... it violates third party
traffic rules ... and on and on ...

If Swatch is allowed to get away with this, what's to stop the
"Little LEO" folks who are waiting in the wings???

We MUST defend our bands vigorously against any and all
commercial encroachment.

I have given up with Mir for a while now with regards to it's SSTV as i have not heard it for ages and the so called information sites are months out of date.

Does anybody know what the problem is/was ?.
thanks

Ian k.

Don't know what's up but I do know that the packet station has apparently been down as well the last few days. Listened to 2 passes today and heard nothing. Maybe they are just too busy getting ready for the spacewalk and repairs.

Carl, some have perverted my questioning the ITU radio regs as a support for the Swatch project, I don't nessesarily agree with the commercial use of ham bands but I have a problem with the alleged violations. The RS-18 satellite transmitted 3rd party non amateur messages on a satellite that was sponsored (according to AMSAT-F website) by a French Aeronautical Club, the messages were in celebration of Air and Space. While this may not be a commercial endeavor if the rules apply to this satellite the 3rd party issue would apply here too

wouldn't it? Nobody said boo.

As far as the commercial use, if the messages sent only contained the word beat, and not messages directly pertaining to Swatch then I think it's questionable whether they are acutally in violation, all this of course is assuming a ham call is used to identify the station. Furthermore the messages that Swatch was soliciting were messages to friends, relatives, etc and I don't recall Swatch ever asking for messages promoting the Swatch watch or any other part of thier company. I guess my problem is the fact that AMSAT-F is discouraging listening to the sat and publishing keps but will not make public any disussions they had with Swatch or the content of the messages, as if the amateur community couldn't decide for themselves what is or is not a violation of ITU regs. I salute them for trying to work with the Swatch company but am dissapointed that no details were made available. I guess we'll all find out on the 16th when the sat is launched.

Hi Ian,

I guess it's been about three weeks now with no SSTV. The word we have here is Jean-Pierre is moving the Ham station into the core module for better access. The Packet/Vox radios apparently have made the move but the SSTV boxes have not yet found ground insulated wall space. Miles described the need to keep the units housing isolated from the Mir ground to avoid large ground potentials. The SSTV unit is much larger than the Kenwood radio/tnc and I guess it is having a little more trouble finding a sweet spot on the wall.

We have a bunch of school kids here pretty disappointed too. They never seem to be very excited by the packet transmissions, so until the SSTV gets going again we'll just have to look at the shots we've collected.

I'm looking forward to sending you some more pictures from this side of the pond.

Just Packet the last two days here in NJ.

I want my M-TV

Hi,
I am new to this, and I just wanted to know if I am hearing the right things :-)
When I tune to 145.985 when mir passes overhead i hear these strange sounding beeps break the squelch. Is this packet? I have been listening to MIR pass by all day today, and that what i heard each time. If this is packet is there a way of connecting to it without a TNC. Maybe some software that uses my sound card, like the SSTV programs?

Also I really would like to see an image from MIR, so if anyone has any information about when they think MIR is going to be txing SSTV please let me know by e-mail my e-mail is: Felixk2@concentric.net

Thanks!
Felix

Umm I'm very new to mir but yesterday mornning I was on R0MIR-1
packet. But since then I have not been able to decode the
packets(could be my system). It sounds a little diffrent than packet
and I'm not sure what SSTV sounds like.

BTW: I live in Newfoundland Canada.

Yes that is probably packet you are hearing as MIR seems not to be tx'ing
packet at the moment
Try using AGW to do the packet with it is very good and only requires a
sound card & a hamcomm type interface for keying the radio with.

get it here: http://www.forthnet.gr/sv2agw/start.htm

Also note that the author is updating the main engine files this week
sometime so remember to get them !

They are still on 145.985 right? I monitored 2 passes this morning and heard
nothing at all. If they are moving the ham gear that probably explains it
though...

I have recently been investigating 144-148MHz(2m). It is absolutely apauling, I am supprised that we can actually use it for packet considering the noise variables which we encounter.

There are several places in which you can look up the new S-Band project. S-Band is also better because you can use a 2 Foot dish to hear beacons as clearly as a ultra-big Downlink Antenna.

Please follow these links below:

A paper by James Miller(G3RUH)
http://www.amsat.org/amsat/articles/g3ruh/115.txt

Joe Steinmetz's S-Band uplink/downlink page:
http://www.moon-bounce.com/sband.html

These two links can be used as a possible substitution for the Coaxial Switch because KWMINC is not in buisness(the domain anyway) anymore.

So in the meantime you make terrestrial noises on 2304
(and 3456, 5760, 10368, 24192...). Like all our microwave
bands, it could use hams making some noises on it.

One of the main problems with this is where to get the S-band
transmitters and recivers. My 2 meter HT cost me only a fraction of
the cost of a S-band rx little lone the tx.

Also there are very few people using S-band at this time so very few
people are going to go out and buy a transciver only to find that
there is no one to connect to.

1181. MIR Freq.

Newsgroup: rec.radio.amateur.space
Date: 1999-04-12 00:00:00 UTC
From: Felix <promo@photoconnection.net>
Message-ID: <01be6cf7$8b1b59e0$2719c998@wingate>
Source record: 12997

Hey,
Does anyone know when MIR plans to change the freq. from 145.985 to
437.975?
Thanks

You can operate a tnc i belive but all you need is a basic hamcomm type
interface for the PTT to the transceiver and a lead to the audio input of
your radio and one from the audio output of the radio to the input of your
soundcard.

that works well for me anyway

I am not sure as to why you think my post was meant as a troll. True, the
humour might escape some folks, but the point is still true, if we all put
these clowns in our kill file, and refuse to respond to them, the noise level
should drop. Even the most diehard lid will leve the air if now one ever
responds to his drivil. These lusers are the LIDS of the internet.
If you desire, I will add you to my kill file and you to will vanish from the
posts that I see. The kill file is as good as the lidlist in my TNC. I
thank the guys who dreamed them up. Now if I could just get my radio to
"kill file" the Lib..oh never mind.

Name withheld to stop, or at least limit, spam. And following the arrest of
some of the folks who sell data slicers, we may all need to hide. And for
what it is worth, data slicers and Jfax allow the reception of NOAA/Meteor
APT images.

This is chicken-and-egg stuff. As long as few people use
these interesting frequencies, there will be little available
equipment, and commercial equipment will be exotic, with
price tags to match. As long as commercial equipment is scarce
and expensive, few people will use the bands. With no-tune
technology it's actually easier to build a rig for 2304 MHz
than for 7 MHz, but ham radio seems to have a collective
mental block on the subject.

Basic capability isn't that expensive. The part that (still)
requires cubic money is high transmit power.

With proper kill-file programming, we could have two completely
seperate newsgroups within the same newsgroup.

My posts were not meant as a "threat".
I have several friends who were unfamiliar with the concpt of a "killfile".
I was only trying to drive home the point that we (those who are not into
pointless fighting)do have an option other than just leaving the news groups.
Killfiles are a wonderful alternative.
And this is not meant as a threat, but "poof" you are in mine.
Have a nice day.
And I will bet that you are a lid on the air alos.

> difference?

The difference is that Swatch is deciding the *content* of the amateur communications, and that content is calculated to promote their commercial endeavor.

Kenwood, et. al., may certainly get their name on the QSL card of the DX'pedition, but they do not attempt to influence the *content* of the amateur radio communications.

I have no problem if Swatch wants to donate a satelite to amateur radio to gain our good will, and a published photo in CQ/QST/73 magazines.

I have a serious problem when Swatch determines the *content* of the communications from an education satelite licensed in the amateur radio service.

1192. DM-3472 UHF Transceiver

Newsgroup: rec.radio.amateur.space
Date: 1999-04-13 00:00:00 UTC
From: James Cutler <jwc@stanford.edu>
Message-ID: <3713BFD3.D43C280A@stanford.edu>
Source record: 12909

Hello,

Just wondering if anyone who has ever worked with the
DM-3472 UHF Transceiver. It's from Johnson Data (johnsondata.com).

We're getting some strange behavior. Every once in awhile after a
power cycle, the radio permanently looses it's transmit frequency.
The radio has a loader that contains a small processor and EEPROM
to load the radio's synthesizer with a frequency. Occasionally,
the transmit frequency gets set to 268.41250MHz. It's quite stange.

I'll go into more detail if anyone is interested. I've contacted
Johnson but no luck getting ahold of them yet.

Thanks.

Ian, if this is the program that uses the agwpe.exe driver, then no, no TNC is requrired but it took me a couple tries to get it going, start the engine first agwpe.exe then run agwterm.exe. If you try a "connect" you should hear the packet bleeps comming from the sound card spaced every 15 seconds or so. The only problem I've had is mine won't run while I'm online for some reason. There is also a monitor program that copies everything on frequency without trying to connect.

Is there any way to set up a killfile for Anony-Mouse messages?
Then we'd only have to read stuff from people who have the
balls to sign it.......

1199. Response from the ITU regarding SWATCH activity

Newsgroup: rec.radio.amateur.space
Date: 1999-04-14 00:00:00 UTC
From: Ron Hashiro <rhashiro@gte.net>
Message-ID: <7f258f$i58$1@news-2.news.gte.net>
Source record: 12915
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

Hi Rob, KC2AEI,

I received a response from the ITU regarding a request
to intervene relative to the upcoming Amateur Space
activity by SWATCH onboard the Beatnik / Sputnik-99 /
RS-19 satellite.

The ITU requested that as a FIRST STEP, that the matter
be brought to the attention of "the Administration
responsible for Telecommunication matters in your country".
In the US, this would be the FCC.

The ITU also requested that this information be circulated
among those who could have been invited to send the same
request to the ITU.

The text can be viewed at:

http://home1.gte.net/rhashiro/am-beatnik.htm

Could you please update your web page accordingly,

http://wmbc.umbc.edu/rob/swatch-protest/

and I'll also post this into rec.radio.amateur.misc,
rec.radio.amateur.policy and rec.radio.amateur.space.

Incidentally, the FCC is aware of the upcoming event.

73 and aloha,

Ron Hashiro, AH6RH
Honolulu, HI

Very good idea. I have contacted OFCOM (Swiss FCC) last thuesday. See
below for details.

> The text can be viewed at:
> http://home1.gte.net/rhashiro/am-beatnik.htm

> Incidentally, the FCC is aware of the upcoming event.

OFCOM is investigating the case, too.
Please do not spam them with complaints, they are really working hard
on the problem and are *very* cooperative fighting for the radio
amateur's rights (do I have to mention, that the guy working on that
case is an amateur, too?). If You have something they might be
interesed in, let me know and I will forward it to them.
As mentioned above I contacted them last thuesday and since then they
have tried to gather as much information as possible to hunt down
Swatch. There seem to be quite a few problems due to the fact, that
the satellite is not operated by Swatch, but the Russian Space Control
Center (if somebody has secure information *who* uploads the Swatch
messages, please let me know). Swatch only forwards the messages to
the operator. Cooperation with Russian authorities seems to be always
one way (complaints are never answered, but in some cases solved...).

I think, Swatch will not stop that project. N. Hayek's sense for right
and wrong seems to be (to be polite) strange. The only language such
people understand is brute force. This means boycott of their product
and anti PR in the mass media. I am shure that at least the second one
will happen, if Swatch has the satellite launched on friday.
So keep on complaining (politely!) on the Swatch comment page.
Spamming them won't help at all, however.

If everyone sends swatch 100 emails, it might just crash their mail server. And while I would never suggest illegal activity, there are ways to mail bomb a site and (cometimes) cost them their net connection. Plus, they have at least two 1-800(800-937-9282 Pa and 800-598-6949 NYNY) phone numbers. Call them from every pay phone you pass and tell them why you think it is a bad idea to spam hams.. They will have to pay, and just might get the idea that hams are not as polite as they might have wished.
The more brave (and/or foolhardy) could even get a pc to autodial the numbers, but you might be prosecuted for this.
The only way to get most businesses attention is to hit their balance sheet. 800 call average around a $1 (us) each. 100 calls per day per pissed ham could really add up.
Or just roll over and watch our frequencies get grabbed by the money hungry, couldn't careless, corperations.

I seem to be missing something here. SWATCH is apparently pissing off
all hams with their plan to transmit a message, and for the most part
only hams will hear the message. This sounds like a net loss for them.
They should fire the idiot that ever suggested the idea to them.

Nice try, but IMO the wrong way. If You want to be taken serious, then
You have to behave serious.
SPAMMING, MAILBOMBING, and TELPHONE-TERROR is a NO-GO!

We should try to organize a boycott for Swatch products. This is the
only way to give them, what they deserve.

BTW: According to what AMSAT-FR said, the Russian Space Agency knew
from the beginning, that they were going to break the law. Instead of
making that fact know to all, AMSAT-FR preferred to complete their
work. Hopefully they learned their lesson: never make business with
the mafia.

Just had a look at the French reglementations at
http://www.loria.fr/~martin/REF-Union/Documents/B0-01.html
and found that the X is used for amateur radio satellites,
so this callsign has been specifically issued for the MIR
satellite operation.

Swatch has retreated. They have said that due to a problem with MIR, they donated the batteries from the Beatnik satellite to power other systems on the MIR station. Here is the latest from their web site:

=====begin=====

Spasiba Swatch.

On April 16th, the Russian Space Program and Swatch were to launch the satellite "beatnik" in orbit with the capability of sending voice and text messages from people all around the world.

Unfortunately, the Russian transmission "Gelios", a key link with the MIR space station, was severely damaged a few days ago.This has created a situation of uncertainty and made communications to the MIR problematic.

Swatch has decided to donate the batteries supporting the beatnik satellite to the MIR cosmonauts who will be using them to run the printer onboard which is the lifeline to earth through which the cosmonauts receive their daily instructions and key operations points.

To thank Swatch for this gesture, we have decided to publish the messages that had been recorded in the beatnik memories and that we are now not able to transmit on the radio waves.

The first Russian satellite "Sputnik" has a special place in the hearts and memories of the Russian people.The gesture of Beatnik has made Swatch special too.

Here are the beatnik's messages
{messages deleted - if you want to read them, go look at www.swatch.com}

There has been a lack of understanding between us and some of you have been very agressive regarding the transmission of these messages. It was a real shame!

Now that this situation has been resolved, we would like to invite you to take part, with us, in this cyberspatial mission, spreading these positive messages all over the net.

-----BEGIN PGP SIGNED MESSAGE-----
Hash: SHA1

Swatch's website at http://www.swatch.com has been updated
with a really bogus-sounding message claiming that they have
donated the batteries from the satellite (which didn't belong
to them in the first place) "to save MIR from a
disastrous communications failure" by using the batteries to
run a printer they claim are the Cosmonaut's only link to earth ...

... like we don't all know that the Cosmonauts have 2m FM,
packet radio, and SSTV capabilities in addition to MIR's
operational communications systems :-)

Swatch's PR people really must have done their advanced
studies at Bandini University :-)
(for those who may not be familiar, Bandini is a US
fertilizer company well-known in some areas for its
bovine-derived product :-)

My personal compliments to *all* who wrote strong, yet polite
messages of protest to Swatch ... together, the amateur
community as a whole turned this around. To those who used
foul language: next time (and their will, unfortunately
be a next time when *someone* will try something like Swatch
tried ... or worse), keep it clean, firm and to the point,
but dignified.

Let's hope that we can continue to work together whenever
necessary to fend off attempts at encroachment on or
reallocation of our precious amateur bands.

If you were paying attention, you would have noticed that it wasn't
the FCC that wanted scanners to be unable to receive cellular phone
transmissions - it was the cellular industry. They convinced Congress,
which passed a law, and the FCC had to do what they were ordered.
So now scanning receivers sold in the USA can't tune cellular frequencies
directly.

It so happens that many such radios can still receive cellular channels
as image frequencies. I have no doubt that the FCC, being somewhat
technically knowledgeable, knew this all along. It's Congress that
was too stupid to figure this out. Someday someone will point out
that the image frequencies are still usable, there will be more hearings,
and eventually a new law - and another pain in the side for the FCC to
deal with. Meanwhile, why should the FCC care?

Dave

Florida Today has a detailed report on the activities and problems that arose during the spacewalk and they say that the satellite was released during the spacewalk. I am wondering if this was a reporting mistake or if they released it anyway without batteries. I monitored a couple passes just in case and it definitely is not transmitting.

Go to the AGW directory on your hard drive and open paint shop pro or
similar and look for the *sys files (similar to windows start up pictures)

they are called agwpe.sys, agwbbs.sys and agwtrm.sys just paint over with
what ever in psp 5 and save !

I must admit with no offence to the Author intended the 1970's look kept
freaking me out every time i started the proggy's :-)

Forwarded Bulletin Follows:

Finally, common sense has prevailed!

Date sent: Thu, 15 Apr 1999
From: Rob Carlson <rcarls2@umbc.edu>
Subject: Sputnik-99 launch cancelled by Swatch!

Sputnik-99 launch cancelled by Swatch!

By deceiving AMSAT organizations in Russia and France, the Russian SCSC
(Space Flight Control Centre) in cooperation with the Swatch company had
arranged to use the two meter Amateur band for direct advertising via the
"Beatnik" satellite (a mini-Sputnik-99 project formerly to be known as
RS-19) across the entire world.

Thanks to the protests of my fellow radio amateurs worldwide, Swatch has
cancelled the mission to use the frequency of 145.815 to advertise their
trademarks from space! Thanks to everyone who helped spread the word and
let Swatch and other companies know that intrusions on the amateur bands
will not be tolerated. Although the call-off message on their web site is
something of a cop out, the result of our efforts is plainly evident.
We've proven again that the fight to preserve and enjoy our amateur radio
spectrum is a good one.

You can see the Swatch site at
http://www.swatch.com/beatnik/index.php3
for the real deal, and the wind down of the protest operation on my site
at http://rob.carlson.org/swatch-protest. I couldn't have done this
without all of you, and I'm so greatful to have had the opportunity to
represent the interests of Amateur Radio.

73 and good luck in the future,
Rob Carlson, KC2AEI <rcarls2@umbc.edu>

This is the biggest Russian lie since they claimed they didn't get screwed by Hitler in a non aggression pact.

>>Unfortunately, the Russian transmission "Gelios", a key link with the MIR space station, was severely damaged a few days ago.This has created a situation of uncertainty and made communications to the MIR problematic.

>>Swatch has decided to donate the batteries supporting the beatnik satellite to the MIR cosmonauts who will be using them to run the printer onboard which is the lifeline to earth through which the cosmonauts receive their
daily instructions and key operations points.

Uh, sure guys, whatever you say guys. Run out of DC outlets boys....

>>To thank Swatch for this gesture, we have decided to publish the messages that had been recorded in the beatnik memories and that we are now not able to transmit on the radio waves.

More Russian propaganda from the same pro Yugo folks who say they are aiming their nukes at us at midnight and by 8 am say it was all a mistake. BTW, remember how they criticized hams for responding to SWATCH next time they crash into something with their underfunded rowboat and yell MAYDAY on 2m....

Get real you guys. Ham radio is nothing. It's probably the crappy 2 metre
radio that caused the problems they are having. Wake up to yourselves.
The amateur bands will be taken from you. The immature response to the
exciting venture by Swatch have shown the world just how low hams can
sink. Swatch got thousands of dollars advertising value and hams lost
any respect they may have had. Nice one guys. You lose.

Barry

Fortunately. the FCC has no say in the matter. Would you really
want to have anything to do with the FCC after they were so stupid
as to ban scanners that cover cellular? The FCC are so stupid that
they approve scanners that receive cellular perfectly on images.

You are missing something. Only a few vocal and very stupid hams are
pissed off. The majority were quietly waiting with bated breath for
the exciting event.

>This sounds like a net loss for them.
> They should fire the idiot that ever suggested the idea to them.

Not at all. The result is a great deal of free advertising for
Swatch and a loss of face for the amateur radio brigade.

Two things come to mind here. Swatch have a higher standard of morality
than the vocal hams because they were prepared to give up their mission
to help MIR. The satellite is still available and could be used at a
later date. We must send emails to Swatch telling them to ignore the
immature hams and to please launch their satellite when they are next
able to.

While I still think we should have started getting all the people we could to call the swatch 800 numbers 10 times a day just to drive the point home, I must disagree about ingoring any "mayday" call. Even from our very "good" freinds and trustworth allies the Sov..er I mean russians. I just can not see refusing to provide emergency comms to they poor patriotic fools who occupy Mir. Fools because it is clear that that boat has outlived its' utility. Of course, about all any of us could do would be to take down their last thoughts as there is no way to lunch a "rescue" mission in any realistic time frame.
Besides the russians are not the only government that likes to twist the truth. Ours has done it a "Few" times.

Well said, Robert!

I notice that the Tim & Jim club etc., who so vehemently defended Swatch's illicit behavior, are strangely silent now that a voice of reason from Switzerland has spoken with predictable sanity and force about this issue.

It was hilarious to watch the absurd defenses mounted for this illegal, annoying and dangerous behavior by Swatch.

Their defenders should go away and get a clue!

For folks who want a serious reply (does that let you out,
chum?) the FCC's "voice" in international interference resolution
circles is very loud and well respected. You see, the FCC's
HF now-remote-controlled direction-finding system is the
largest and most accurate in the world (it certainly did not
"go away" when the monitoring facilities went unmanned) and
other Admins regularly ask for FCC assistance in resolving and
pinpointing HF problems, most of which are unknown to the ham
community because they are not in the ham bands.

As far as the "scanner cellular channel ban" goes, the FCC was
FORCED to do the above by The Congress against the private
judgement of knowledgeable technical staffers and outsiders in
the business. If the FCC had its way there wouldn't be any such
restriction because all is does is to add more equipment
inspection duties (imports and retail outlets) to a field staff
that has more important things to so. But when the cellular
industry says "jump" The Congress says "how high" on the way
up. The FCC is caught in the middle.

Such is life.

Hi

I saw you comment on the Swatch Web Site and agree with what you said.

I am from Universal Time Organisation which is promoting a system that rivals Swatch Beat. If you would like to check out our web site visit www.universal-time.org We are a free non-profit organisation and oppose Swatch in what they are doing.

Send me an Email with your comments to <address suppressed>
Thanks for your time!

Paul

While Barry may have displayed a singularly high degree of dumbness
in his other postings, you shuould realize that the convention is
different in MOST ENglish-speaking countries from what it is in
America.

American English represents a minority oin the English-speaking world.

In standard English it is a common practice to refer to a group like
FCC or THE CROWD in the plural.

This is always used with a company too.

As in, for example:

Hoover are giving a big discount on vaccum cleaners this week because
the hams who supported Swatch need something new to suck with.

See the difference?

SO, while I must agree that Barry sounds extremely dumb a lot of the
time, you have picked on him here for what is normal English grammar
in most countries like England, Australia, South Effrica, India, etc.

Cedric

:>they approve scanners that receive cellular perfectly on images.
:
:If you were paying attention, you would have noticed that it wasn't
:the FCC that wanted scanners to be unable to receive cellular phone
:transmissions - it was the cellular industry. They convinced Congress,
:which passed a law, and the FCC had to do what they were ordered.
:So now scanning receivers sold in the USA can't tune cellular frequencies
:directly.

I stand corrected. It would seem that both the FCC and ACA are underfunded
and understaffed and thus unable to carry out their duties as they would
like.

:It so happens that many such radios can still receive cellular channels
:as image frequencies. I have no doubt that the FCC, being somewhat
:technically knowledgeable, knew this all along. It's Congress that
:was too stupid to figure this out. Someday someone will point out
:that the image frequencies are still usable, there will be more hearings,
:and eventually a new law - and another pain in the side for the FCC to
:deal with. Meanwhile, why should the FCC care?

Good point. I know that in the early years of the law many scanners
were produced that could be easily modified. I understand that now
the law requires that scanners not be easily modifiable. It seems
only a matter of time before the image reception loophole is closed.

Over here there is no such law but we still get radios that are
blocked for the US market.

Thanks.

: Dave

I am certainly vocal and definitely *not* an idiot. An idiot is someone who would say something such as, as I quote you, "The Swatch behaviour was interesting and exciting." What is interesting and exciting about crass commercialism? If the Russians had any money in the bank this would never have happened. I suspect that if I offered them a few million myself they would be willing to launch a satellite with a beacon that transmitted "barryo is a bozo". Would you find such an endeavor "interesting and exciting?"

Barry, with a "genius" like YOU to DEFEND amateur radio, like
you have the last week or so on here, I am SURE that we will
have no problem maintaining the amateur radio service over the
next few years, and perhaps extract a great price for it by selling it
to the likes of UPS and SWATCH.

You really should keep your day job, OM!

He he he he he!

Ijust found this announcement on the web:

NEW SPACE OPERATION ANNOUNCED

17 April 1999, 0000:02:21 UTC

Commercial use of space and Amateur Frequencies by Beer Company

Watch the news for announcements by Heineckin Beer Co.,
which is planning to launch a Drake L-7 driven by an Index Labs
transceiver set up as a continuous beacon on the moon, with a 3
element wire yagi aimed at earth transmitting a continuous message
with the word "DRINK!" in every message.

These messages are being recorded on the Internet right now,
and you can add YOURS to the memory chips that will be sent up
next month by the Russian Space Agency!

Of course the transmissions will be in the fashionable, MODERN mode of
SSB on a frequency somewhere between 3890 and 3900 Kilo Hertzes.

There will be no batteries to go bad or get "left behind" or be
"inadequate" this time, like in the previous attempt by Swatch!
THIS launch will not even need a satellite! No, it will be a
GROUND-BASED system, and the only requirement is that someone
go to the moon every 30 days and add fuel to the supply tank for the
1 KW generator!

Tim, KA8DZZ has volunteered to be trained as an astronaut so he can do
this duty for Heineckin, but NASA has not responded yet as to whether
they will accept and train him.

Broadcasts will begin in May and continue through the expected life of
the system which is expected to run though November and end at 2359Z
on the last night of Sweepstakes.

There have been no comments in response as yet, from organizations
such as ARRL, ITU and No-Code Intergnashinal

To add your message and to make comments, please see the company's
web site at:

http://www.ka8dzz.com/heineckin.htm

Not 'strangely silent', 4-1000. Bored Shitless would be a better
definition. You really need to take a reading comprehension class.

I don't recall 'defending' what Swatch did, I think the point I was
trying to make is that a bunch of Handy Talky Geeks who write
like they quit school in the third grade sending emai to Swatch
was not the best way to fix 'the problem'. And I also recall saying
that it seemed to me it was a very minor problem.

But anyway, our heros have saved the day and defended amateur
radio from the evils of commercial advertising, so we'll just have to wait
until the next big 'problem' comes along. Maybe you and Tim can
find something to piss on each other about until that comes
along, just to keep us entertained ......

Actually Cedric I just got tired of pointing out pathetic your arguments were, you had your head completly up your ass regarding 3rd party international traffic, saying it wasn't permitted 'period' I had to point you to the ARRL web page that shows all the countries we have agreements with.

You didn't have a clue that one way transmissions were permitted and that there are special considerations for space transmissions. In a RAGE of ignorance you tell me that no brand names are allowed to be mentioned by most countries including all European countries, of course I emailed you the reply from RSGB, where do you get this stuff Cedric? Do you make it up for fun? Try spending a day or two acutally doing some homework before you start pointing out how stupid the rest of us are.

I never once said I supported what Swatch was doing, I was questioning the amateur communitys responce as well as interpretations of radio regulations, you twisted it as best you could into your own fantasy debate making claims that if it's illegal "Tim" must be for it. Your a dweeb anon troll Cedric, nothing more. Get name, post a call, do something but have the balls to at least stand behind your words, I don't give a damn if you want to write the story of Heineken on the moon and post my name and and call, just sign yours. Nobodys going to fire bomb your house Cedric, but it's time to step up to the plate or simply resign as another nameless spinless troll.

Source record: 12803

Hi, I have managed, on a few passes to hear my own downlink from RS13.
Trouble is, after much calling I'm not getting any responses. I'm
downlinking around 29.475 to .480 which I presume is the mixed portion
of the band and seem to have a good clear signal through the bird.
I don't hear SSB in use that often, and by the time I find a QSO, I
lose the footprint :-(
Is this the luck of the draw or what?
Anyone in EU fancy trying to work me later today, I'd be grateful for
my first satellite contact!

PS anyone give me the grid ref. of Bridgwater England?, (or a resource
to find it) I just moved QTH so can't get check it out 'till at least
Monday. Got to be 52N, 2W or thereabouts...

M1BJR was in Plymouth UK, IO70wk

Regards from Steve,
Bridgwater,
Somerset.

steve@steve999.nospam.dircon.co.uk
Remove the "nospam" before replying, thanks.

Thanks for replying..Just one question what do you mean you log packet
activity? How does that work? What kind of info do you get?
Can i do that? I use the packet program for computer(i do no have a TNC).

Thank you very much.

Lets see if I get this right, you are a ham [from somewhere] who wants
a corporation to violate international law and create willful
interference on the amateur radio 2m band for their personal profit?

Well if you are a US ham I would think that attitude would make you
unfit to hold a US license.

W4SCO

1293. Re: [amsat-bb] (Fwd) Well, Maybe One More!

Hello
Is it legal for an amateur radio operator to tie up a frequency by playing a pre-recorded message constantly 24 hrs a day for weeks at a time (not even his own voice)

As long as they ID at the proper time intervals, and since the rules state
that no one owns a frequency, I guess they could use it as long as they like
as long as no one else wants to use it. Out of curiosity, what is the
content of the prerecorded message? The contents of the message may be the
determinging factor.

Can't you read? It says "This is not about some bootlegging scofflaw in a SE
Asia rain-forest;".
In any case, the Swatch company may not be as guilty as they first appear.
They may have been truly conned and misinformed by unscrupulous parties. If
they really knew how big their audience was going to be, do you think they
would have bothered?

The following from 97.113 may be violated:

(b) An amateur station shall not engage in any form of broadcasting ,
nor may an amateur station transmit one-way communications except as
specifically provided in these Rules; nor shall an amateur station engage in
any activity related to program production or news gathering for
broadcasting purposes, except that communications directly related to the
immediate safety or human life or the protection or property may be provided
by amateur stations to broadcasters for dissemination to the public where no
other means of communication is reasonably available before or at the time
of the event.

From the Part 97 rules on the ARRL web page:

Definition of terms.

Beacon. An amateur station transmitting communications for the purposes of observation of propagation and reception or other related experimental activities.

Broadcasting. Transmissions intended for reception by the general public, either direct or relayed.

97.203 Beacon Station

(a) Any amateur station licensed to a holder of a Technician, Technician Plus, General, Advanced or Amateur Extra Class operator license may be a beacon. A holder of a Technician, Technician Plus, General, Advanced or Amateur Extra Class operator license may be the control operator of a beacon, subject to the privileges of the class of operator license held.

(g) A beacon may transmit one-way communications.

97.113 Prohibited Transmissions

(b) An amateur station shall not engage in any form of broadcasting, nor may an amateur station transmit one-way communications except as specifically provided in these rules; nor shall an amateur station engage in any activity related to program production or news gathering for broadcasting purposes, except that communications directly related to the immediate safety of human life or the protection of property may be provided by amateur stations to broadcasters for dissemination to the public where no other means of communication is reasonably available before or at the time of the event.

The rest of it is at:

Hi Jim! I know, I was just trying to play devil's advocate and ponder the
original question <grin>. With the above definition, what if the
transmissions were not meant for reception by the general public, but
strictly for amateurs? Oh well, it beats the SWATCH debate :)

Well, how legal is it to ask such questions on rec.radio.amateur.space?

Both could be considered abuse, I guess... except maybe when the
transmission is relayed via satellite.

Seems to me if it's amateur radio related it's fine. Advertizing is business and that's not allowed if I'm not mistaken. Since Mir transmits amateur radio info and ID's with it's call (during packet for instance) naturally there is no problem.

Obviously if their packet station transmitted a commercial for some company there would be a problem, even if it was a product concerning amateur radio.

Corrections welcomed, I'm not perfect!

73,
Tom

Don't think MIR is under the FCC rules as it it from the USSR. Then there are also becon rules from the FCC. I was assuming the question was asked from someone falling under the United States FCC rules. Also there are exceptions to the rules. Or maybe not really exceptions, but special cases such as what W1AW does.. Code practice and bullitins. If someone is just tying up a frequency with out any real purpose, then that would fall under the rule about 'good amatuer practice'. Kind of a catch all rule.

Steve,
A general rule to follow is to use cw in the lower half of the passband and usb in the upper half. If you are using voice, you should listen or call cq between 29.480 and 29.500.

I like to find a quiet spot around 29.485 - .487, tap my key and tune the transmitter to hear my tones. I then commence calling cq.

I am assuming that you are using mode A (2m up).

Good luck.

1313. NOAA Sats with IC-T7A

Hello,
I have an Icom IC-t7a fm transciever and i would like to use it for recieving NOAA sats. When the sat is overhead i hear beeps from the sat but there is much distortion. A friend informed me that i need 42 kHz of IF bandwidth. I do not know how much i have...i checked the manual and it said: Intermediate Frequency: 1st: 45.10 MHz, 2nd: 450 kHz. Is my radio good for this? or do i need to modify it somehow. If so can someone please help me out here.

Also if anyone has schematics for a 137Mhz preamp. Please let me know..I would like to purschase them.

Thank you for your help.

>his own voice)

Dale this is already done in CW and I see no specifics in Part 97 that says it's any different for voice. It's early and I'm off but check out 97 under beacon, there are specific frequencys that may not include voice portions of the band but I think so. As far as the 3rd party voice, that's also legal. All this assuming the station is identified properly.

>Thank you for your help.
>Felix
I hope that I do not get flamed for my reply....
First you are confussing IF frequencies with IF bandwidth.
The 1st IF of 45.10MHz is the frequency that the incoming signal is first converted to, then the 45.10 is converted to 0.455MHz
Lets assume that that you are tuned to 145.10MHz, your first Local Oscillator (LO)is either 100MHZ or 190.2MHz (the LO is the desired freq plus OR minus the IF ..145.1-45.1=100 or 145.1+45.1=190.2.
Then that 45.1MHZ is converted to 455KHz so 45.1+0.455=45.555 or 45.1-0.455=44.645MHz.
Since this is an Narrow Band FM radio, the bandwidth will be somewhere around 15KHz. Way too narrow. The 1st if(41.5) will almost cetainly be wide enough, most of the selectivity(narrower bandwidth)
will come from the 455 stage, which in addtion to an amplifier will almost certainly have a ceramic filter, with a very narrow band width. If you are brave, have the technical skills and data, you might be able to tap the 455KHz stage prior to the ceramic filter and build you own FM detector.
But even if this works, it will not have the best noise figure, and unless you get a very good signal (=good antenna and preamp) the results will be disapointing.
There is a ham in Malta, Brian Cauchi, who markets a program, FTV, that has modified a standard FM radio to receive the 138 band. He had an image of Malta on his web page and it was very good.
His web page is >http://user.orbit.net.mt/briane/index.htm<
so you might email him for details of his coversion. Even this would be a

comprimise as standard FM radios have way too wide a bandwidth and let in too much noise. But it will work, my first attempt at APT reception was with a Tandy Pro2004. It has two bandwidths, too narrow and too wide. But I did get useable images in the WFM mode.
BTW one of the reason why I decided to go with the Icom PRC1000 is the selectable 3/5/15/50KHz bandwidth.
Good Luck

1318. SAT RADIO FT847, ALT ELV Rotors BIG SPACE/SAT stuff 4sale

FOR SALE (BIG LIST)
see these item's pictures at
www.inconnect.com/~rmra/4sale.html
Dated 4-21-99
---
1 UHF RFC 4-110 amp, all mode MINT Condition
430-460 10 watt in 100 + watts out takes
N connectors and needs a power cable
(Standard 4 pin)
$299 new, this has NEVER been transmitted on,
used it only for rx preamp for SAT work.
$225.00 or offer

Motorola GP68 20 Channel, 4 watt 430-460 Walkie
Desk Charger Rapid/trickle, MINT keyboard
programmable on HAM Freqs now, WITH RARE
Dealer Programming manual
in ENGLISH for the US DEALER, not Mexico or Asian
dealers, has a VERY VERY light scratch on the case
above display..nothing you can see while wearing it,
but something you'd see if you PAWED all over it
when you get it:)Asking $225.00 obo
---
4 month old FT847 YAESU SAT BASE RAdIO
HF through 512 MHZ , with CAP/MARS MOD done
by YAESU CERTIFIED LOCAL SHOP.
Asking 1300.00 or trade straight across for FT-100

Motorola UHF Consollette Base Station, with
power supply, on 462 something...with full micor
inside, can be made into self contained repeater
Asking 75.00 obo

Motorola MAXTRAC 16 pin VHF mobile....Awesome condition
on ham freqs, 40 Watts....
Asking 250.00 obo

Yaesu /Kenpro 5400 ALT ELE rotor system, with dual
70' Beldon feed cables
Asking 300.00 obo

Yaesu FT-470 Dualband walkie, charger, 3 batteries
UHF is fine, VHF tx module only puts out 100 mw, but
walkie works ... Volume pot needs to be cleaned. But

in GOOD condition otherwise, and an excellent deal
at $50 obo

Wilson 2 channel 2 watt UHF Walie, with Battery
and Desk Drop in Charger,
works GREAT, with tone board, AWESOME for GMRS
or FRS stuff...
This is a beauty..... asking 60.00 obo

I also have various Uniden, Regency and Wilson
4 and 6 ch 5 watt VHF 145-160 Walkies that work,
great for search and rescue or fire groups.
Email me for more info

NOTICE to buyers: all equipment is sold as-is, but

>Then that 45.1MHZ is converted to 455KHz so 45.1+0.455=45.555 or
>45.1-0.455=44.645MHz.
Sorry for that glaring math error, I shouln't attempt simple additon before
the cafine kicks in...
Lets try the 2nd conversion again.
45.1MHz+0.455MHz=41.955MHz or 41.50MHz-0.455MHz=41.045MHz
I am assuming that everyone knows that 455KHz =0.455MHz

1320. Working thru ROMIR-1 Packet

Newsgroup: rec.radio.amateur.space
Date: 1999-04-20 00:00:00 UTC
From: Joe Schlatter <w4hh@3wave.com>
Message-ID: <in8T2.3176$Bm3.213302@news20.ispnews.com>
Source record: 12836

What do I do to get a signal digipeated thru the ROMIR-1 packet robot?

I have simple eqpt: 25 watts to a vertical on a hilltop. I hear ROMIR-1 solid on most passes and see other station IDs coming through the robot. At least, I assume the IDs are coming through the robot. What I see on my packet screen is:

>ROMIR-1>call sign #1

>RMOIR-1>call sign #2

>ROMIR-1>call sign #3

>ROMIR-1>call sign #4

etc.

I am sending C ROMIR-1 but it's pretty clear that I am not going to make it with simple eqpt, so, I would be happy just to see my call digipeated. Is that possible and what do I do?

Thanks,

Thanks,
What about Sputnik 41 RS18. It played the voices of the children of French Amateurs 24hrs a day for a month. Isn't that broadcasting? It must fall under the exceptions to the rules mentioned below which I couldn't locate. I checked the special rules for space stations, it says they may conduct "one-way" transmissions but doesn't use the word "broadcast". the law also says that such a space station must have the capability of being turned off on command which the Sputniks definitely do not have after launch. I was wondering if the Sputniks are technically illegal in their originally designed form as well as the proposed altered form that was so offensive.
Dale

Jim Wrote

(b) An amateur station shall not engage in any form of broadcasting, nor may an
amateur station transmit one-way communications except as specifically provided
in these rules; nor shall an amateur station engage in any activity related to
program production or news gathering for broadcasting purposes, except that
communications directly related to the immediate safety of human life or the
protection of property may be provided by amateur stations to broadcasters for
dissemination to the public where no other means of communication is reasonably
available before or at the time of the event.

I don't think the Russians and the French fall under FCC jurisdiction.....
Part 97 only applies to U.S. licenses.

Do a net search for WUN (world utility network). Somewhere on their site
they make a refference to a program that can work with the 15KHz bandwitdth.
Somehow the programer found a way to "correct" for the narrow bandwidth.
I have never used the program, so I can make any comment, good or bad.
I do not see how you can add data that has been chopped by too little
bandwidth, but soem programers work some heavy magic.

Turn on the mcom and/or mcon commands. This will let you see traffic on the frequency. That is IF the program has these commands. I'm not familiar with that program. Read the documentation carefully.

Unproto is a mode which allows you to send unacknowledged packets, packets that don't require and ack back from another TNC. You can set the command so that your unproto message for instance gets digi'd by another station.

Please DON'T do this! It only ties up the PMS and digi for everyone else.
The MIREX group explicity asks amateurs not to do this! You are better off
to send an UNPROTO packet and see if the digi retransmits it.

Hi Joe,
The Mir digipeater has been off and on lately. Your set-up should get you into R0MIR-1 with little trouble. BUT, because so many people are connecting it is VERY hard to get in, you just have to wait until you see the connected station disconnect and you see the <D> or <DM> from that station. Then it's time to pounce. Just keep trying. It's not easy but your set-up is fine.

As far as the digipeater is concerned that is REAL easy IF it's on. You must set your unproto command to CQ via R0MIR , then go into unproto mode. Send a short Hello message or CQ and if Mir hears you you'll see it come back and look like this: W4HH>R0MIR*> (your message here). Then wait to see if someone sends a hello back. Connecting to someone else via Mir is not recommended as it ties up the station and slows things down for everyone. short unprotos are fine and fun to do!

Hope to see you via Mir!

73,
Tom

I just thought of something, it was agreed upon many years ago that no nation can hold claim to Space. That was why the USA didn't claim the Moon as US soil when the flag was placed there in '69. So if this is the case and Space can't be claimed by ANY country, how is international law being broken? Europe doesn't even have as much spectrum on 2 meters as we do so if they receive, by some freak of nature, a repeater on 147.000 are we then breaking that same law? Would we be held liable for our repeater being transmitted out of their band plan?
I have heard so much junk on repeaters lately that this SWATCH issue isn't even able to compare with the jamming that takes place or the music some bone-head decides to play just to jam others. If SWATCH goes ahead with the plan they have, jamming the frequency will not do a thing to it except make you feel better that you jammed it. Then you are breaking FCC rules by doing it. Hey Canadian stations can use voice on our CW bands on HF, lets acuse them of jamming all of the CW operators while we are at it.
(That statment is just an example, I have no problem with Canadian operators on HF.)
If the satellite does transmit and it is coming over your house, there is a secret that no one has even thought of as yet that can make SWATCH furious. TURN OFF THE RADIO!!!. Don't listen to it and you won't know it is happening. Lets worry about other things instead of this issue, P3D example. Is it going to fly? Is it worth all of the money spent so far?
Alot of people have given money to this project, but where is it?
I have an idea, lets have SWATCH launch it use it for a couple of weeks for the little show. Hey at least P3D would be in orbit.
N4YEK SAID THAT.

There are specific rules forbidding broadcasting below 30 MHz. The rules
are a bit different above 30 MHz.

Besides MIR is not regulated by the FCC so the point is moot.

Chances are that the bandwidth is about 15khz, hence you hear a lot of
clipping. You can work with this but the picture quality is not good.

The details are:

April 21, 1999

Converted Russian missile puts British satellite into orbit

Copyright ï¿½ 1999, The Associated Press. All rights reserved. This
material may not be published,
broadcast or re-distributed directly or re-directly.

MOSCOW (AP) - Russia launched a converted ballistic missile from
the Baikonur cosmodrome today with
a British research satellite. Liftoff occurred at approximately 1
a.m. EDT (0500 GMT). Spacecraft officials
say the experimental UoSAT-12 satellite was injected into orbit as
scheduled.

The launch was the first commercial mission for the former Soviet
Union's arsenal of SS-18 Satans, all of
which have to be destroyed or used for peaceful purposes under the
START arms reduction treaty.

Used as a booster rocket, the SS-18 can put satellites weighing up
to 4 tons into orbit, the ITAR-Tass news
agency reported, citing the Russian Space Agency's official in
charge of the launch, Alexander Kuznetsov.

Russia also is converting its SS-19 Stilleto ballistic missiles
into booster rockets in a bid to increase its share
of the profitable market for commercial satellite launches.

The Baikonur cosmodrome, which Russia rents from the former Soviet
republic of Kazakstan, is used for
manned and commercial launches.

the launch platform for P3D is quite specific and it is entirely too large, and
its orbital mechanics require a completely different type of launch vehicle
than that used for this latest sat.

This event has been cancelled, but the rest of the amateur
radio activities, as well as the other events planned, are still
going to happen at the Blue Hill Observatory just outside
Boston, so I thought it might be of interest.

This observatory pioneered studies of the atmosphere, first
with kite-borne instrumentation, and then balloons. Tests
(published in QST and the IRE) with very early VHF radios led
to the ducting theory of radio propagation.

BLUE HILL OBSERVATORY GRAND RE-OPENING TO BE HELD MAY 1

(Milton, MA just outside of Boston)

The Observatory is saved and we are excited to show it to you!
After a year and a half of renovations, and over a million dollars of
painstaking work by the MDC, this historic building is now ready for
the next century.

On May 1, 1999 the Observatory will host a gala Open House to
celebrate its Grand Re-opening. The day will begin with a live
television broadcast by Ch. 7 meteorologist Mishelle Michaels, a visit
from the National Hurricane Center's Director, Jerry Jarrell, and a
ribbon cutting ceremony conducted by MDC Commissioner Balfour.

The Mystic Valley Amateur Radio Group's special event station will
recreate historic radio transmissions made between Blue Hill and Mount
Washington.

A festival of kite activities will include demonstration flights,
kite-making workshops, and lectures on the history of kite research at
the Blue Hill.

The day will end with a reception for friends and benefactors of the
Blue Hill Observatory.

Hours Saturday: 9:00 AM to 3:30 PM

For further information please call 617-696-1014 (Blue Hill).

If you happened to launch it over European territory, yes. In reality, the signal from a 2m FM repeater is highly unlikely to travel from the USA to Europe. In the extremely unlikely even that it did, it would be a transient event.

> I have heard so much junk on repeaters lately that this SWATCH issue isn't
>even able to compare with the jamming that takes place or the music some
>bone-head decides to play just to jam others.

Which is a very good argument for taking action against the boneheads on the repeaters, rather than let Swatch effectively join their ranks.

> If SWATCH goes ahead with the
>plan they have, jamming the frequency will not do a thing to it except make
you
>feel better that you jammed it.

Agreed.

I guess the illegal operator could file a complaint against you, but I doubt that it would happen.

>If the satellite does transmit and it is coming over your house, there is a
>secret that no one has even thought of as yet that can make SWATCH furious.
>TURN OFF THE RADIO!!!. Don't listen to it and you won't know it is
happening.

Great, ignore the problem. And when P3D is full of messages like "Oh what a feeling", "Just do it.", "It's Mac time", because the big corporations paid the launch operator, you'll just keep turning off the radio? Why bother to remain a ham? [OK, I know in practice this is not likely to happen on P3D, but if Swatch had gotten away with it, other big companies would have an argument to make 2m a commercial band.]

>Lets worry about other things instead of this issue, P3D example. Is it
going
>to fly? Is it worth all of the money spent so far?
>Alot of people have given money to this project, but where is it?

I gather they've had various problems with getting space on a suitable launch vehicle.

> I have an idea, lets have SWATCH launch it use it for a couple of weeks
for
>the little show. Hey at least P3D would be in orbit.
>N4YEK SAID THAT.

N4YEK made precious little sense when he did... what do you mean - that letting Swatch pirate on 2m would enable P3D to get into operation?

If you want to be a ham, take the time to help preserve what you worked hard to earn the privilege to use. If you're just going to tutn off your radio every time an intruder turns up, rather than hunt them off, why not just save time and give up Amateur Radio now?

> Sorry for the stupid question..but how do you send an UNPROTO PACKET?
> Thanks

Perhaps this information from Miles Mann of MAREX will help. It describes the end-to-end use of UNPROTO. I first saw this article on this newsgroup. Also, it may help to set PASSALL=ON, MCON=ON, MCOM=ON in addition to the UNPROTO and CONVERS procedure below. (On many TNCs/terminal programs you can enter CONVERS mode with either the CONVERS command, K, or F2 on MFJ.) Your TNC will remain in CONVERS mode until you turn it off with a disconnect command.

Miles Mann MAREX-NA
(Manned Amateur Radio Experiment, North American Division)

Mir and Packet UnProto mode

The Mir PMS (Personal Mail System) also supports the Digital repeating mode called UnProto. I am not going to get into too much detail about UnProto, for more information check Amateur radio hand books and back issues of Amateur Radio magazine. Basically UnProto is a way of sending packet messages without requiring an acknowledgment from the other station. This mode is similar to RTTY in that, you can have several stations in one big QSO at the same time. Set your UnProto command in your TNC, on my KAM the syntax is "U CQ V R0MIR". Then switch to Converse mode (enter K at cmd: prompt). Now everything you type will be transmitted in UnProto Mode. If the Mir station hears your transmission, the Mir PMS Digi will rebroadcast your information with a range of over a 1000 miles. Below is a short UnProto be-tween a station in Massachusetts and Alabama, using the Mir Digi. The stations were arranging to meet on Oscar 13 when the Mir pass was over.

WF1F>CQ,R0MIR*/V [04/21/93 22:22:09]: <UI>:
hi Tim can you work OSCAR 13?

N8DEU>CQ,R0MIR*/V [04/21/93 22:22:30]: <<UI>>:
Hi miles, yes what freq?

WF1F>CQ,R0MIR*/V [04/21/93 22:22:40]: <UI>:
145.895

The UnProto mode does not guarantee you message will ever be heard, but if the Mir Digi does rebroadcast your line of text, then you can be assured that someone saw it. The line of text you send will be repeated with an Asterisk after it, R0MIR* If you do not see the

Asterisk, then Mir did not hear your packet. UnProto does have its drawbacks, but it is much more efficient to use on Mir than the Direct two-way connect method. Full two-way packet connects via the Mir PMS are not recommended because they use up too much resources and excessive Retries. Before you try Unproto on Mir, I recommend that you practice on a Terrestrial Digi first before attempting to use the Mir station for Digi-repeating. If you make a few UnProto calls and do not get any echo's back from Mir, it is probably because UnProto is turned off or because of a collision. Occasionally the System Operators may turn off Unproto (Digi = OFF) to improve the Mail Box traffic flow. The Mail box access should always have top priority over other traffic. Also there is a good time and a bad time to use the UnProto mode with Mir PMS.

Do not use UnProto when:
1. The Mir crew is operating in Voice mode.
2. When the Mir PMS is connected to another station that is actively sending/receiving information from the Personal Message System (PMS).
Any Index packets going to the R0MIR-1 address.

The only real safe time to use UnProto, is when the Mir PMS is in its 2 minute time-out mode. This time-out is caused when the station connected to the Mir PMS is out of range and cannot log out of Mir. No one can log into PMS Mail box (R0MIR-1) until the connected station times out. Time-outs are the best time to use UnProto. Before using UnProto, monitor Mir's down link to see who is using the PMS Mail box port R0MIR-1. If you do not seen any Index packets from Mir PMS to the ground station using to the R0MIR-1 port for 60 seconds, you can assume the connected station is out of range of the Mir PMS and its UnProto time.

The shorter the Unproto sentence, the greater your success of a PMS repeat. Long sentences may get clobbered by other stations. If you are in the middle of an Unproto QSO and you see someone connect to the PMS Mail box R0MIR-1, you should end your Unproto QSO and let the Mail box users have access to the PMS.

Previous Testing of Two-way Connects:
In 1993 WA2GSY in New Jersey (now W2KQ) and I WF1F in Boston made arrangements to test the efficiency of FULL-TWO-WAY packet connects verses Unroto messages. Unfortunately I have lost the original logs from the test, but I do clearly remember the results. We made arrangements for the Mir Amateur Radio station to move to a private channel for a weekend. Then Joe and I attempted a Full-TWO-WAY packet Digi connect via the Mir PMS on a perfectly clear channel. The orbit was a perfect pass, traveling from Texas to Maine. The 10 minute pass had good elevation. Both of our stations were similarly equipped and running high gain antennas with approximately 1200 watts ERP of transmit power each. At the beginning of the pass, we sent a few Unproto packets, and then

Joe issued the full two-way connect to my station. After the initial log-in we each sent each other two simple lines of ASCII text and then logged out. Now you must remember we had a perfectly clear channel. There were NO other stations on frequency because we had moved the PMS to a private channel. There was no interference from any ground stations.

It required over 4 minutes for us to exchange the 2 lines of text. The total number of packet transmission from all three transmitters was over 200 packets. Every packet which I sent, had to be heard and retransmitted by the Mir PMS. The same packet was then sent to WA2GSY and had to be acknowledge. The acknowledgment from WA2GSY then had to go back to Mir and be re-broadcast cast back to my TNC. Four transmission are required for each original packet. However since my station in Boston cant hear when Joe's system in New Jersey was transmitting, there were dozens of packet collisions. These collisions are what cause the efficiency of two-way packet to drop. With a full-two-way connect each packet sent must be acknowledged. This causes a tremendous amount of over head in this particular satellite configuration. The efficiency of full-two-way connects via Mir is less than 10% on a clear channel. Now if you add in the normal amount of traffic to the Mir public channel, you can see that full-two-way connects are a complete waist of time. The efficiency of Unproto on the other hand is greater than 50%. And Unproto is more band friendly.

The existing design of the Kantronics KPC-9612 does not allow us to filter out the difference between Unproto and Two-way connects its just all or nothing. So we need to rely on your courteous corporation and for people to help spread the word on the correct operating procedures.

Good luck and lets be courteous to everyone.

Remember, Only 1 station can connect to Mir's PMS at a time, and try avoid using UnProto when someone is actively using the PMS Mail Box.

> Thanks

There are two 'modes' you can transmit with packet - 'connected' or 'unproto', which is the 'not connected' mode.

When you are connected, your packets go to the station you are connected to.

In the unproto mode, your packets are 'broadcasted', so to speak. The unproto mode is usually used for beacons and can be used for calling CQ.

I don't know what you are using, so it's difficult to answer your question specifically, but if you are using a TNC, there is a parameter in the TNC called 'unproto' and you can set that to whatever you'd like, including VIA another callsign.

VIA means your packets will be repeated by another station. So if you set your UNPROTO param to SPACE VIA R0MIR-1 then if MIR's TNC hears it, it will repeat the packet. If you set your UNPROTO param to only SPACE, then your unproto packets are broadcasted to SPACE - anyone who hears them can monitor them, but no other TNC will repeat or respond to them (providing there is no TNC with SPACE as the callsign). If you set UNPROTO to another TNC's callsign, that TNC will probably send you a DISC command every time you send a packet, so set UNPROTO to something that's not a call - CQ, SPACE, VHFNET, whatever....

A TNC also has two 'modes' - conversational and command. In the command mode, whatever you type goes to the TNC as a command. In the conversational mode, whatever you type goes as data and is transmitted - if connected, to the station you are connected to, if not connected, to whatever is set in the UNPROTO param.

If you are in the command mode (cmd: prompt) you can get into conversational mode by typing a K - and then everything you type will go out as unproto data. To get back into command mode, type Control-C and hit the enter key.

If you are using some kind of sound blaster card software, how anything works is totally dependant on the mood the programmer was in when he wrote the software, so RTFM..... Sound blaster software is a great way to get started with packet, but if you intend to use it seriously, I'd recommend a TNC.

Have you ever tried setting UNPROTO to QRA? It causes *SOME* stations
hearing the QRA to beacon. I know it works with the older AEA TNCs.
I'm curious what it does with more modern analog and DSP firmware? Back
in my old terrestrial packet days, I used this trick to see who "was
around."

Nope, I've never tried that Mike. All the TNC's I have are Kantronics and
I've never seen that mentioned in any manuals. Maybe it only works with
AEA TNC's...

Thanks for all the replys...i understand...I have a program called AGW, and i use my soundcard. I do not have a TNC. The program has a window called UNPROTO. When i connect to a station (never worked)...another window opens...when i type in the UNPROTO window, i hear the packet sounds coming from my sound card...is this the UNPROTO mode?

Once again, thanks for all your replies!

Yeah the person doesn't have any demos or anything and the program costs $25. i am a bit skeptic. So i did not purchase it.

1355. Satellite Tracking Web Page

Newsgroup: rec.radio.amateur.space
Date: 1999-04-23 00:00:00 UTC
From: lee810@aol.com
Message-ID: <7fp3e8$3ft$1@nnrp1.dejanews.com>
Source record: 12721

There is a satellite tracking page linked to quite a few ham web pages (including mine) which would be a great way for someone just getting started to be able to listen for satellites like Mir or AO-27. I say 'would be' because the Keplerian Elements on it are more than 4 months out of date. This has the effect of giving erroneous information and thus causing frustration to new folks not aware that Keps must be updated on a regular basis to give accurate satellite pass data. The web site URL is:

http://acsprod1.acs.ncsu.edu/scripts/HamRadio/sattrack

The owner is Lou Williams (KE4ARM) but he doesn't respond to email and the link to the upper page is broken, which means perhaps he has graduated and there's no one there to maintain the page.

If anyone knows of a way to get new keps into this site, I would be very grateful as it's a nice resource for someone new to satellites. It would probably also benefit by having the default satellite be AO27 or Mir instead of the International Space Station, at least until they get on line with some communications.

A web based satellite tracker is a great starting point for someone who doesn't want to go through the trouble of choosing between the 18 different tracking programs that are available and having to download, unzip, learn and then discard the majority of them.

I've seen a few web pages for satellite tracking with cumbersome interfaces that seemed to be targetted at people looking for satellites visually (e.g. on NASA and GSOC web sites). Those sites are pretty useless if you want to find a ham satellite or get an ephemeris printed for a few days of scheduled passes.

Thanks,

I think your problem is that you're sending to ROMIR instead of R0MIR, if this posting is any indication of what you're actually typing. I did this the first time too. The second character is supposed to be a 'zero'.

After you manage to connect and leave a short message to qualify for the QSL card, there's really no point in connecting to the BBS any more since it's really a bit bucket. There's no hope of reading anything in the BBS on a pass over the U.S. as the digipeater is pretty active and the passes just don't last very long. The 'J' command is somewhat interesting to see the last 10 stations that connected, but that's about all there is to the BBS.

I generally connect unproto with the command 'C DN70 R0MIR'. This inserts my grid square into the packet that contains my callsign so I don't need to put this info into my messages. A simple 'Hi CALLSIGN' is sufficient to establish two way communication with other stations and has a much higher probability of success than to try to actually conduct a QSO in unproto mode, particularly if it's busy.

Mir is actually the easiest satellite to work because you can use a low power 2M FM transceiver, a simple antenna, and you don't have to worry about Doppler Shift.

When you use unproto for Mir you use it without connecting to anyone. Your
just sending messages straight over the air. If she hears you you'll see your
message digi'd by Mir's callsign. As I stated in my first reply.

How very true!!!!!!! I bought a yaesu ft-290r (2.5 watts max.) for 150 dollars. It did come with new batteries and a 10 watt amp. Full multi-mode capabilities for little money. Now to wait for summer to start chasing the birds on my holidays!

From: Mike <va3hie@eagle.ca>
Message-ID: <37210C74.4F226863@eagle.ca>
Source record: 12730

I have been trying to chase the "birds" for a while now. However as my job does not allow me allot of time for radio anymore, I am struggling immensely. If anyone would be interested in helping me I would greatly appreciate it. I currently own a Yaesu ft-290r and a Kenwood tmv-7a, along with a ft 840 for rx.
My antennas are a vertical dual band and 2 10 element beams stacked at about 44 feet.
My main problems seem to be knowing when they are in sight and for how long. I have tried win orbit and can't get it to work properly. I am only home on weekends, so like I say my time is limited (or so it seems).
Any help (chats would be good ICQ #22053266) will be greatly appreciated.

You might want to try some horizontal dipoles for the antennas.
Something like a 2 element beam with about a 3/8 wavelength spacing
pointed up will give a little gain and a patern that is very broad.
Have you visited the :

www.amsat.org

page and looked at some of the downloadable sharewear for the
tracking programw ? It may help to compair 2 or more programs to
see if they agree within a small time or if you are hours off.

Wrong! There is all kinds of software for the PC with SoundBlaster for
decodeing CW.

I see no need to know CW. I think all the old coders are just scared
that if they drop the code the will come out with a more diffcult exam
for HF that you guys can't pass.

Just my 2 cents worth.

I have a question is Oscar 27 and AO-27 the same thing?
I am looking for a sat that has packet on it, and uses FM. Can someone please direct me to one. I know MIR is one.(By the way, what freq. do you transmit to MIR on? 145.985?) But MIR doesn't pass frequently.

What other ones are there? I am not really interested in TXing to the SAT, just monitering it (for now). Also please include the freq. for the sat.

Thanks for all the help..this is a great newsgroup!

The problem is, is the old HAMS think "Well, we had to go through hell to
become a HAM, so should everyone else".
This sums up why alot of people aren't becoming HAMS as indeed alot of requirements
are very outdated.

Hehe, sounds like what grandfathers tell their grandsons :)
They sit around all day bitching about how everyone has it easy "these days".
I always wanted to respond "Gee grandpa, maybe I can light myself on fire or something to make you feel better".

Hello Laura,

Always enjoy the condescending tone that you can put into words!

Lets see now, P3D is a International project. So it would be your wish that the project be penalized by any countries wishes?

My idea really is simple, and legal. Get P3D out of the US because the current political regime considers any satellite technology a national defense issue. Of course there is strong indications that the current regime acquired monies by leaking some of this technologies to others.

Seriously, Amsat hit a US State Department wall. Lets learn from that and keep the International Amateur Radio Satellites elsewhere for now. Or at least until there is a more favorable read from the US State Department.

Christopher Cox

Outdated crap? Handguns obviated hand-to-hand martial arts. Or did they? Ox-drawn plows have been replaced by heavy machinery. Except on small farms, and in underdeveloped areas. I painted my living room with a roller and paint tray. It might have been easier with a power roller, but I'm not planning on painting much else anytime soon. I watched my neighbor struggle to put in deck posts using a hand auger. I wonder if he knows about other tools he might have used. I watched another neighbor dig his post holes with a power auger, with a very large friend helping. The bit grabbed every few seconds in the clayey soil, and would torque the two men off their feet. (Neither way looked like fun, so I have stone pavers instead of a deck. That wasn't much fun, either.)

Everything has their time and place. I especially liked Jeffrey's explanation about CW on HF. I realize it's not for everyone. For them, there's FM on VHF.

Michael.

Old fashioned: Anything requiring an attention span of more than twenty seconds or having anything to do with putting in an amount of time to attain something. The term can also include anything having to do with tradition. See "hazing ritual", "lodge hall", "hoop jumping" and "old boy's club".

Out, damned Spot!

To all who have sent their comments:

Maybe you had better take a good look at what you are saying, some comments are well thought out and others are not. True there may be lazy people out there who don't want to work for their privileges, but there are those who do. Some of these people have handi-caps (which are not considered handi-caps), I happen to have an extremely hard time with timing and separating the characters when receiving. I have tried NUMEROUS times to get it but can't (I'm not whining). So I turned my interests to "above 50mhz."
As for the comment Mr. Young made there is more to vhf than fm. A lot of people who think morse code is out of date and "whine" about it are possibly too busy to learn it and the only enjoyment they get from ham radio are portable or mobile. Myself I am gone from home 5 days a week with a home, car and family to take care of. Now as for the people "set in there ways", did anyone consider, the most of these people are older? With age not only come wisdom but a sense of comfort and security in things that are familiar to them. The laws for code will change in time , once these people have passed on (regrettably). Please let's keep the issue alive as it is one in the RADIO community which will need to be re-evaluated on a constant basis, but can we keep it civil? Remember amateur radio is not only a PRIVILEGE but a SERVICE as well. Also every time one transmits they are nominating themselves as ambassadors to their country. you never know who, where you are being heard. Even on VHF FM.
Thanks for reading,
hope I opened some eyes.

SOAP-BOX mode>on....

The difference in Hams who had to pass the CW requirements of their particular license class,and the people who would like to have a license in the same class,is simply the Hams WORKED for what they have.The others obviously dont want it bad enough.I got past the 13 wpm CW requirement in 91 and,have never used CW since,as I had to work so hard at it,I grew to hate it!(it didnt come very easy for me) I do agree however,that CW ...maybe..shouldnt be a requirement,but it should be replaced with something that will separate the serious radio ops from the curious.A good friend of mine,who is an MD,stated it perfectly..."75% of the 'hell' I went thru in medical school was designed to 'weed out' the students who werent dedicated enough to become a Doctor." The same holds true for Amateur Radio,in that there should always be some difficult 'hurdle' to overcome before obtaining a license.This is by no means a perfect solution,but its the only one we have at the moment.

Joe, I agree with your post. I think a technical hurdle would be far
more value to amatuer radio, than the antiquated morse hurdle.

Well, let us narrow it down to one essential Q, is
it necessary to KNOW the code
for using HF and Phone ?
There are opinions that says theese are to prevent
cb'whiners to get on the air, and
i might agree to that. Nevertheless, globally seen
there is a drop in the number of 'hams'
and i belive one of the reason is the lack of PR
reagarding this matter, not because CW
is a demand !
When you are taking the exam, you have to be able
to send and receive code by a certain
wpm, and ofcourse some extra theory too. After say
you are become a family-man or busy at work
you take up your old hobby and is once again QRV,
but what about your code then.....?

After some years i guess that the majority has
forgotten their skills rather its 5wpm or 25wpm !
Fair that they can use their equipment then ? I
mean not, if i could decide, there should be
regular exams
in the code for at least once a year, since this
is SO necessary to be able to talk on HF !!!

Then this would happen :
A- many would fall apart and loose their call.
B- the interest for morse and skill would all the
time be at peak and we wouldnt risk any danger if
emergensy SOS or eqv were heard !

I'll put my head out for the gulliotine for this,

You are implying that you have a right to set a standard value over all HAM wannabees
and then have a right to deem a certain amount of work to meet that value.
As you know, the FCC is the only one who has a right to set these values and the amount of work
needed, not you.
Sit there and get upset all you want, resent us for things being easy, but the fact is, FCC will be dropping
code from the requirements in less than 3 years and will also be updating its tests to reflect modern times instead
of their current tests which are geared more for those who wanted to became HAMS in the 1950's - 1970's.

MONDAY APRIL 26, 1999

* UoSAT-12 LAUNCHED! *
======================
UoSAT-12 was successfully launched just before 0500 UTC last Wednesday morning from Baikonur. By Thursday, SSTL satellite operators at the Surrey Space Centre ground station in Guildford, Surrey, UK reported that their UoSAT-12 minisatellite had successfully passed the Initial Signal Acquisition phase. During this phase, the satellite's downlink was activated, on-board systems enabled and telemetry data received from all essential bus subsystems.

Telemetry data received at Guildford and collected by co-operating AMSAT ground stations around the world indicates that all systems are operating as expected; received signals from the satellite are strong and the telecommand uplink is reliable. Thanks to DB2OS and VK5AGR for forwarding telemetry during this important phase of the mission.

Operators have also uploaded flight software to the satellite's primary on-board computer. This multi-tasking software will collect telemetry throughout the satellite's orbit and support the Attitude Acquisition Phase of the mission.

During Attitude Acquisition, on-board software will gradually bring the satellite to an Earth-pointing state. Simultaneously, operators will perform further satellite tests. Payload tests will start when the satellite is Earth-pointing.

All indications from Surrey are that the ISC Kosmotras Dnepr launch was highly successful, delivering the satellite safely and accurately to orbit.

The OBC is now running with the callsign UO120-11. The BBS is closed for general use at this stage although the downlink is on permanently on so stations can receive the downlink on 437.400 MHz FSK.

Keplerian elements for UoSAT-12 have object number 25694. This is called SNAP-1 by NORAD but is actually UoSAT-12. Actually, SNAP-1 is a nano-sat

that was to be launched with UoSAT-12 but was not launched. The object being tracked by NORAD is actually the shroud from the launcher.

The following keps are correct for UoSAT-12:

UoSAT-12
1 25694U 99022B 99111.87871775 .00019922 00000-0 30916-2 0 40
2 25694 64.5610 316.4522 0001414 11.6425 348.4724 14.73155686 88

[Info via Chris Jackson, G7UPN/ZL2TPO]

* OSCAR-10 NEWS *
==========
AMSAT-OSCAR-10 has come out of hibernation, and many reports have indicated that the satellite is performing quite well. Several groundstations are making digital contacts through AO-10's analog transponder using PSK31 modulation. PSK31 uses a baud rate of 31.25 and a bandwidth of 31 Hz and an alphabet similar to morse code with short codes used for common letters. PSK31 achieves a text speed of about 50 wpm, and uses software developed by G3PLX running on a PC with a soundcard.

Peter Klein, KD7MW reports that by using the narrowest possible filters in his transmitter and receiver, the performance of PSK31 even without error-correction is certainly better than most modes, and has the added advantage for live QSOs that the performance degrades very gracefully as the signal drops.

Very careful on-the-fly tuning was required to use PSK31 via AO-10 due to slight downlink frequency variations caused by the satellite itself. The downlink signal was observed to vary back and forth 25 Hz or more during an approximately 2-minute transmission. Peter found that if he used the PSK31 communications software and watched the phase circle carefully and hit the appropriate arrow key 3-5 times (Hz) when the phase indicator began to shift, he could keep the signal properly tuned. This variation was independent of the doppler shift.

So the bad news is that while the transponder is stable enough for CW or SSB, it's not quite stable enough for the tuning requirements of PSK31. Groundstations must "ride the receive tone frequency", and if you stop to read what you're copying, you'll miss something. A couple of determined operators will be able to pull off a QSO on BPSK, but they will have to work for it.

Anyone wishing to attempt a PSK31 contact with Peter via AO-10 are asked to contact him via email: kd7mw@amsat.org

AO 27 and Oscar 27 are the same.
This satellite is basically a 500 mile high FM repeater, it transmits on
436.8 MHz (doppler effect may +/-10kHz).
It can be worked with a HT with a decent whip antenna.

This sounds similar to the logic used by fraternities, some parts of the military, etc. for the continued practice of hazing: "WE got the crap beat out of us when we joined; we deserve to beat the poo-poo out of someone, too!"

If knowing Morse code is actually USEFUL for something these days, then by all means keep the requirement. But if nobody uses it, why bother? Somehow, I don't see extracting a pound of flesh from new recruits as a worthwhile reason.

>I got past the 13 wpm CW requirement in 91 and,have never used CW since

So by your own admission, knowing code is useless.

Why are such "hurdles" necessary? One can kind of understand it with the medical profession - it pays extremely well, and it's in everyone's best interests to weed out the gold-diggers. However, ham radio is a hobby - it pays nothing. In fact, it *costs* you some pretty serious money! The only benefits of participating in it are those derived from the activity itself. If you're not "serious" about it (whatever that means) you'll get bored and find something else to do, i.e. you'll weed yourself out; won't you?

For the record, I am not a ham radio operator, but am considering becoming one at some point. Thus, barriers to entry (and the rationale behind them) are of great interest to me.

I am neither for keeping or eliminating the code. I will point out that thousands of DXers, ragchewers, QRP operators, Contesters and homebrewers operate on CW, some exclusively. CW is often referred to as the "gentleman's mode" in ham radio. Folks that claim that CW is outmoded and not used are not aware of the facts, and stating opinion rather that facts.

"Hurdles" are necessary to seperate Ham Radio from other unlicensed services such as CB. Note that the technical portion of the test is revalent to ham radio since hams are permitted to build, design, align and
adjust their own transmitters--something that is not permitted in any other class of radio service. Operating a ham radio transmitter implies some knowledge
of the theory behind its operation.

Most of the "NO CODE" whinning I object to comes from those who something for absolutely nothing; no code, no theory. That class of license already exists on 27 MHz.

Regards

Pete

Pete ... I believe that if you were to review the past couple
of years worth of postings here, you'd find that it's NOT the
no-coders and no-code-test advocates (like NCI) who espouse or
seek a "no theory" situation. It's simply a red herring that
the procoders toss out from time to time in an attempt to
generate FUD and division.

In fact, if you'll visit http://www.nocode.org and look under
the articles section for the copies of our comments in WT 98-143,
you'll find that NCI told the FCC that N/T/T+ should have to
take the "missing written element(s)" to upgrade to General and
Advanced should have to take the "missing written element" to
upgrade to Extra (we proposed 3 classes T/G/E).

Now, the ARRL proposed "instant upgrades" for N/T/T+ to a 5 wpm
General ... but they tried to hold on to as much code testing as
they seem to think they might possibly persuade the FCC to keep
with their proposal for 12 wpm for Advanced and Extra (they want
4 classes so the OT extras don't get PO'd at "losing status"),
so they don't get hauled over the coals like NCI. NCI is the group
that gets accused of being the "no theory" bunch ... which is
a bald-faced lie ... which is a typical tactic of many procoders.

Check it out for yourself ... the documents NCI filed with the
FCC don't support the bogus assertion that we favor a "no theory"
situation AT ALL ... in fact, they prove just the opposite.

73,

Certainly he didn't say this! He said he (Joe) hasn't used CW since passing element 1B eight years ago. Anything beyond that is your speculation.

No, no, no. Money isn't the issue at all. Medical doctors are trusted with public life, health, and safety. For hams, sharing the limited airwaves wisely is at issue. CB'ers prove you can operate the appliance without any special training or knowledge. Heck, I could have unpacked an HF transceiver and got on the air without special training. By law, though, I am allowed to use a portion of the precious airwaves if I can demonstrate that I understand misuse can cause harm or interference to other users. More privileges will be allowed when I demonstrate more knowledge and ability. If Morse proficiency demonstrates only personal commitment, then maybe that's all it needs to mean.

I live in the suburbs now, and parallel parked maybe twice in the past ten years. Indeed, there are very few places to park curbside here. Most driving tests still require you to do this sufficiently well. This, too, might be considered HAZING. I think it only means you should know how to park without obstructing traffic, or banging into fenders or sign posts.

Michael.

Greetings Billl

If you check some comments made earlier (in this thread
I believe) someone suggested eliminating the code but
beefing up the theory portion of the exam--this raised more
negative responses.

Regardless what elements of the test that remain, you will
continually have complainers--whether the subject is code,
or not seeing the need to learn theory once the code barrier
is lifted.

73

Pete

The no-code people are not the cry babies. They don't have a problem
with people learning code or using it. It is the Code fanatics that cry
when people don't want to learn or use code.

Go ahead and talk nasty about no-code operators in a secret code that
they can't understand. They don't want to hear that kind of message
anyway!

Gete it right, Slick What was said was that it makes as
much sense to
get rid of written testing as it does all code testing. But
then, they've *already* gotten rid of most written testing,
except for the formality of learning which answers go with
what questions.

No, it's more your implying that CW is outmoded and is no longer
used on the ham bands. Have you ever listened to the CW bands
during a contest, or DXpedition? Why is virtually every amateur kit
on the market QRP CW rigs? Have you ever listened for CW activity
period on the amateur CW bands?? Unfortunately, you still miss the
fact that thousands of hams, old and young, new licencees and old
timers, find CW an enjoyable mode to operate.

If CW is eliminated from the tests, fine. I love uncluttered CW bands.

It sounds like you are trying to force YOUR values more than anyone
else, and for the wrong reasons.

If you feel so strongly against any difficulty in obtaining an Amateur
license,why not just buy a CB?Some people dont have your'gimme
something for nothing" attitude.In my opinion,Amateur Radio dosnt need
you.

I would like to state ,here and now,for anyone who wants to read
this post,that I am not against No-code licensees.I know many who
entered the hobby as NCs and the vast majority of them are very good
ops and most went on to up-grade to the upper class licenses.I would
welcome eliminating the CW requirements altogether,but only when
provisions are made to replace CW with more advanced theory.Also,I
would like to see a probationary and mandatory training period (where
operating procedures are practiced ON THE AIR,under the supervision of
an 'Elmer') required for all new Amateur ops.

>Most of the "NO CODE" whinning I object to comes from those who something
>for absolutely nothing; no code, no theory. That class of license already
>exists on 27 MHz.

I am on my way towards getting my no-code license because, I'm afraid,
that's as far as I will ever progress. I have tried for years to lear
Morse, but some glitch in my hearing or noggin or something will not let me
get the knack of it.

When I was little (30-something years ago), I used to be glued to my
step-dad's shortwave, sending postcards (I must have spent a forturne
sending cards around the world).... I desperately wanted to be part of that
world, I had a telegraph key to practice with, I specifically tuned into the
morse broadcasts so I could try to develop an ear for it...to no avail...it
just wouldn't happen. I dropped away from shortwave for years and have only
recently become aware that I now have an entry(albeit a limited one) into
the world of my youth.

I have nothing but admiration for those who can pick up morse code. I wish
I could.

William

I am sorry, but you need to read much more carefully.
I have stated SEVERAL times that I have no problem
with the elimination of the code test. What I DO have
a problem with is the assertion that CW is both "dead"
and "outmoded" on the Amateur Bands.

Secondly, William, please explain to me how increasing the
number of hams is going to do anything to save the bands
from commercial interests? What good was served by
the millions entering the CB ranks during the 70s? Did that
form a more disciplined and thriving service based on
shear numbers?

Karina

I hope the cw requirement is sufficiently lowered or eliminated
so that you may enjoy amateur radio. CW should not be a
barrier to keep those who want to join the hobby to do so.

I know a lot of people who have the same problem learning CW;
and I agree with your observations. Please understand my comments
are directed to those who insist that code is outmoded and not being
used on the ham bands.

And once all the smoke clears from the issue, the bottom line is just as you have stated.

I am a "no-code tech" at the moment, but will be upgrading soon. I am working hard to get it done BEFORE the change takes place (if it does). I hope that if the changes do take place, that a person be allowed to request to take his exams under the old requirements, and that there be some differentiation in call signs between those who earned their licenses and those who got them in a box of Cracker Jacks.

As indeed, you are doing here...stating YOUR opinion
and not facts as to the mode being whatever one might
care to consider it as.

>"Hurdles" are necessary to seperate Ham Radio from other unlicensed
>services such as CB.

NO!

Justifiable requirements are needed, not Hurdles simply
for the sake of hurdles.

>Note that the technical portion of the test
>is revalent to ham radio since hams are permitted
>to build, design, align and
>adjust their own transmitters--something that is not permitted in any other
>class of radio service.

Agree completely.

>Operating a ham radio transmitter implies some
>knowledge of the theory behind its operation.

Agree again!

>Most of the "NO CODE" whinning I object to comes from those who something
>for absolutely nothing; no code, no theory.

That is pure bull as NO ONE from the NO CODE
side has even suggested, much less asked for,
any no code/no theory license.

If you can provide proof to the contrary, please do.

>That class of license already exists on 27 MHz.

Actually that is incorrect as there is NO such thing as
a CB license at all.

1999 YHOTY AWARD - NOMINATIONS CLOSE MAY 30

The nominating period is open only until May 30 for the 1999 Newsline Young Ham of the Year Award. With corporate sponsorship from Yaesu USA

and CQ Magazine, the Young Ham of the Year Award seeks to honor the Amateur Radio related achievements of those hams age 18 or younger.

In addition to a trip to the 1999 Huntsville Hamfest courtesy of Yaesu, this
years winner will also get to spend a week in Spacecamp Huntsville thanks to
CQ.

The full details, rules and a nominating form are available right now on our
website at www.arnewsline.org. Or send a self addressed stamped envelope to
the 1999 Newsline Young Ham of the Year Award, 28197 Robin Avenue, Santa Clarita California 91350.

I have a virtually new FT-736R with both 6M and 1.2GHz modules installed.
Orignial owner, purchased about a year ago, one of the last. Absolute mint
condition and perfect operating condition -- used little. Also has FM CTCSS
module installed. To be sold only as complete unit as listed -- the ultimate
in VHF/UHF/satt radios. Serious buyers only please! Asking $2000 (original
discounted retail more than $3000) and has both the owner and service
manuals. - dont want to sell, there will never be another VHF/UHF box like
the 736R but cannot keep the investment waiting for Phase 3D.
Expanding shack in other areas. Free 16 element 1.2 GHz yagi (commercial)
with
purchase!! ($100 original cost).
Contact Bob / N6MTU / email: magill@ix.netcom.com --- will call and discuss
with serious buyers.

I'm an HAM and also an electronic engineer. I'm also not that old since
I'm 28. I didn`t go "through hell" to learn CW, it`s just easy.
The point is that if one doesn`t have enough patience to learn a simple
and slow CW ability he probably will just end up buying expensive rigs
with tons of watt and burn antennas with them saying probably that this
new 1KW ampli is just great to talk with its neighbours.
This is not the ham spirit imho.
With 10 watts you can work the world.

>bother? Somehow, I don't see extracting a pound of flesh from new
>recruits as a worthwhile reason.

Oh boy. Here's someone else who doesn't have an antenna connected to
his receiver. If he did, he'd find that roughly 50% of the QSOs on
the HF hams bands are conducted using CW.

>Why are such "hurdles" necessary?

You need to step back so as to get a global view of why the code require-
ment exists for HF privileges. RF at HF respects no boundaries, and as
communicators first and foremost, hams the world over should have at
least one mode in common. At present, there is only one mode all the
world's HF-licensed amateurs hold in common: CW. Whether one chooses to
use it or not does not matter; if the need arises he has it available to
him (maybe at a slower speed than when he was first licensed!). The phone
modes won't work as an international mode due to differences in languages,
but there are sufficient code pro-signs so that a meaningful QSO can
extend across language barriers. A digital mode could become the
international standard, but until such time that every ham worldwide is so
equipped and/or has the ability to build and self-maintain such
equipment, CW will remain the common mode. The ITU has this global view
while many individuals have only an insular nearsightedness - their own
personal goals out-weigh those of the global amateur community.

(Daily worldwide comms don't normally take place above 50 MHz, so a common
mode in that region can be chosen on a national level; for us it's of
course FM phone.)

That's largely because you've never learned it. What have
we been saying - if you don't learn it to get the license
you never know what it amounts to, or what you're missing.

> I think all the old coders are just scared
> that if they drop the code the will come out with a more diffcult exam
> for HF that you guys can't pass.
>

How's that again? 'A more difficult test that you guys
can't pass'???
Well, the tests now don't seem too hard to memorize the word
associations to pass, no learning is needed, you know. That
doesn't seem likely to change soon.

> > The problem is, is the old HAMS think "Well, we had to go through hell to
> > become a HAM, so should everyone else".

This is one area where you no-coders really stumble. It
was NOT "hell", but rather a most interesting learning
process culminating in a feeling of solid satisfaction when
all the tests were successfully completed. Gee, so sorry
that you'll never experience all that. Your loss. But, I'm
sure you, like the rest of the no-coders, will be able to
live with it, once your cheap-'n-easy HF license is in hand,
no learning needed and little or no code. That's a very
visible characteric of the code bashers.

Have a look at:

http://people.qualcomm.com/karn/mpf_budget.html

Phil quotes the numbers and says where they came from.

>Don

Well, Don, sorry to see you go. And you will go.

But it's attitudes like yours that are going to be the death of CW.

CW will go as a requirement, it's only a matter of time. But spoiled
brat attitudes like yours and others will eventually lead to stagnation
of CW, and then the protected sub-bands are going to go.

And you point out that most of the advances in electronics over
the years were from HAMs. That's true. But it sure had NOTHING
to do with CW for years.

Face it, CW is neat, it's fun, but it's not the savior and protector of
HAM radio. That funtion is up to the members, and hopefully
members that are open to new ideas and moving (hopefully
PUSHING) the envelope forward. Not those stuck in the past.

Hi,

I've been getting fantastically clear pictures from the NOAA and Resurs weather satellites for a while now and I would like to take this further if I can.

Firstly what has happened to Meteor 3-5? I received a few transmissions from it about two months ago but nothing since. Is it still operational? I believe that it was transmitting on the same freq as Resurs until recently so maybe I was getting Resurs all along and not Meteor?

Secondly Okean and Sich. Am I right that they transmit on 137.40MHz according to a published schedule and if so how do I get hold of it? It's not really practical for me to leave my setup receiving all the time so I would rather anticipate the transmissions if possible.

Thanks for your help,

Paul Telco

Mike, don't be afraid to run with gear from a swap, Invest $20 in a dummy load and piece of coax. Tell the guy you'll take it if it works then go plug it in and test it! I just bought an Alinco DX70T and a 25 amp supply out the door from AES for $787, but I can honestly say I had just as much fun running an old Heath HW-101 that I paid $75 at Dayton a few years ago and put another $30 into it for tubes. Also QRP kits are selling for $50, you need not spend a kilo buck to have fun. It is about fun isn't it? :)

I used to like CW back in the 80's when they were first starting out. They put out some good tunes like: "Like a Novice" and "Jammin", but once they got into that "VOR in the USA" phase they have gone down a musical suck trail and I've since tuned out.

That's an interesting question; should we consider a no-code license
to be a valid end-point for those who aren't interested in the extra
priviledges, or only a stepping stone to a "full call"?

I imagine that there are probably a lot of people around who are more
interested in VHF, UHF and microwave than they are in HF, so a no-code
license suits them just fine. The Australian "limited" licenses allows
all-mode, full power only all bands above 50MHz.

Hamish, who took the code exams 4.5 weeks ago and STILL does not have
his results. Unimpressed.

It doesn't matter what "we" consider it to be or not to be. The
authorities consider it a valid end-point. If they didn't, they
would have made it non-renewable like the 50s novice license in
the US.

This is EXACTLY the attitude that is causing the all the problems with
this code/no-code debate, and I really want to grab everyone who
thinks like this by the throat and slap them silly while yelling at them
"ARE YOU THAT F***ING STUPID????"

It's this attitude that anyone without CW skills, or with 'lower' CW
skills
than the person doing the evaluation as 'less' of a HAM. The BULLSHIT
attitude that some people have that the license was a final exam that
granted rights and privlidges.

In my mind, and remember, my opinion is more important to me than
your opinion, is that ANY AND ALL licenses are ENTRY EXAMS, to
get you into the hobby (it's a hobby, not a lifestyle as some people
that
appear to have no life seem to forget) so that you can learn and grow,
not stagnate.

Since the inception of incentive licensing, the exam does grant
privledges. As far as being 'final', in my case yes, in your case,
no.....

>(it's a hobby, not a lifestyle as some people that appear to have no
>life seem to forget) so that you can learn and grow,
>not stagnate.

Did you figure all this out in the last couple months by reading
newsgroups ?

Is this besides the fact that knowledge of CW is required by international treaty for access to certain frequencies? Or are you suggesting that the government simply ignore the treaties and make it's own rules?

Even the world of no-coding is very enjoyable, As a custodial single parent, I do not have the time to spend on code practice, and neither the time nor money to buy HF equipment with. I primarily operate VHF mobile, although when I do find a little time I like to play with antennas in my backyard (see http://www.tfn.net/~gfloyd7/antenna/) and have found that 2 meters is ideal for this as the antenna is small enough to be easily built. Although I do not have my code out of the way, I would hate to see them eliminate it altogether. It is a very proud tradition of amateur radio, can be heard even when voice cannot, requires no real special equipment (keying your mike on AM or FM would work), and is required by international law. So who are we to tell the government to ignore that law?

Not even the FCC. Ever hear of the ITU? Or is looking that up too much work for
you?

>
> >> Sit there and get upset all you want, resent us for things being easy,
> but the fact is, FCC will be dropping
>

I don't resent you for anything. I'm a no-coder myself. But I don't whine like a
baby because I don't have HF priviledges either. I haven't earned them, so why
should I deserve them? As a single parent with no time for study or HF
ragchewing, VHF mobile operation suits me just fine. If at some point in the
future, I have more time to devote to the hobby, then I would use some of that
time to brush up on my code at least to the standards required not only by the
FCC, but by international law.

Let me jump in here Paul. You should subscribe to the 'wxsat-l'
mailing list which discusses all aspects of wxsats and keeps
up-to-date with transmissions. Meteor 3-5 (137.30MHz) is currently
switched off. Resurs continues on 137.85MHz (see my web page)

Yes, but no. Both transmit infrequently. The schedule is now only
issued in Russian and only to subscribers (and me!).

Being of slim pocketbook and putting a son through out of state college I am on the cheap road to WXSAT reception. I plan on starting out by using a scanner with a modified IF to get the proper bandwidth. Is there a particular older scanner that comes to mind that would be well suited to this. One that was known by you sat whizzes as "that sure worked good for a...". I am in contact with a gentleman that has MANY scanners but I have to come up with some model numbers.

Any help would be appreciated.

Glenn

How ridiculous. What if it was VHF that required code and not HF? It
has nothing to do with EARNING, but silly laws.

What if we make it a requirement to learn Russian before one can drink
water? Will you not whine then also because you didn't EARN the right
to drink water?

When people don't whine or complain, they get get walked on by the
government. If I beat you, would you whine then? Or would you have to
EARN the right to whine?

So, tell me. How many subjects or material did you cover in
school that you felt were something you would never use and only forget?
You may consider learning the code a waste of time (yours) BUT, if it
is required to obtain the license you still need it, like it or not.
You may never parallel park a car in your lifetime (in 35 years of driving
I never have), soooo, should it be eliminated from the driving test?

Most of your frivilous analogies fail to hold any water.

Pete

Your right, I shouldn't have had to answer questions about RTTY, Packet, SSTV, VHF, UHF, Voice modes, modulation techniques, questions about 20m, 15m, 10m, questions about EME or any of these things since all I wanted to do was operate my homebrew 40m cw rig on 7040KHz.

Why was I subjected to this unessesary testing, I have no intentions of doing any of those things, It just wasn't fair that I had to answer questions on things I'm never going to use. Sheeesh....

The treaty itself has provisions specifying exactly how certain sections
can be ignored. Japan has taken advantage of those provisions.

STS-93 is the next, and probably last, SAREX mission. The launch date is in doubt awaiting the outcome of the Air Force DSP IUS investigation. Launch is currently set for early July. There will be voice and packet on STS-93.

Yes, Mir still has an amateur radio station. Take a look at http://www.amsat.org/amsat/news/ans.html for information about operational modes and status.

Using Mir and SAREX requires patience. Listen to make sure that you can hear the station. Don't transmit packet if the crew is using voice. Wait until the crew calls CQ. Let the crew finish their QSOs. Basic courtesy is the rule. If someone else is connected to packet, wait your turn. It will take a little longer but it makes things ever so much nicer. And remember to have fun! 8) There is some good Mir information at http://www.ghg.net/mbordel/jscarc/mir/index.html including a FAQ with some guidelines for contact procedures.
73s,
Will

I dont agree with all the rules but I do follow them.Why? Because they
ARE THE RULES!!!

The whining is not about following the rules, it's about changing the
rules!!! Most of the complainers about doing away with Morse Code for
licensing seem to be older hams, and old people have problems with
change whether it be the ARS or some other endeavor. That's why when you
visit nursing homes, the furniture, table settings, etc. are not changed
very often, change disturbs these poor folks' equilibrium.

Perhaps we should change the name of this hobby to the Amateur Radio
Skilled Nursing Service. :-0.

Joe, if you don't feel any rules need changing, keep in mind that is only your opinion, not some commandment handed down from above.

Is the thinking of you older hams (not age, years in hobby) so insular that there can NEVER be a change in the rules?

Are you saying EVERY minute of EVERY day you are busy learning/doing
something that is of the utmost importance to your future?You dont
watch TV?Do you have any hobbies?How much time do you spend on the
internet trying,in vain,to justify your incorrect feelings about the
CW requirements? CW is part of it and if you have a problem with
that,learn to play another musical instrument and leave the ARS to
those who choose to follow the rules.I dont agree with all the rules
but I do follow them.Why? Because they ARE THE RULES!!!

And maybe thats exactly what's wrong, that some people feel that
their privlidge is 'earned' and damn to everybody else. Just like
CBers that 'claim' a channel. I hear the same thing on HF. "My
Frequecy' kind of BS. They're just CBers with another license.

You bet! That and seeing the lids that make a slight advancement
and then sit on their ass being 'experts' without knowing what the hell
is going on. Extras (and one a 'tech rep') who are surprised when they
learn that an alkaline battery last longer than a nicad. Or who tell
people to 'cut the lock line' in a PLL circuit.

Don't judge me because I don't spout CW. I used to like it. In fact,
I still do, but I don't operate CW anymore, and the skills have long
been lost. I still have my old Swan downstairs. It has NEVER seen
a mic in it. In fact, it has NEVER seen anything but a straight key.
Period. In the entire time I've owned it since 1981. (I even have
a mobile chopper for it.) One of these days I'll get that fire back
to operate CW again. But I'll do it because I WANT to, not because
I have to.

Mike

Why can't you get it through your head the difference between
forced to learn and tested on knowledge and being forced
to learn a skill.

Opps, sorry, do you think the skill is more important than the
knowledge?

One of the early bearcats covered the 136 to 138 band, and you could replace the ceramic filter in the IF strip with a 0.01uF cap.
I should still hae the dat somewhere, (I never throw anything away, I just loose it). DRIG (The Dallas Remote Imaging Group) has (or had they may have died , or disbanded) the mod. It was real simple and worked fairly well, especially with a decent antenna. A JFET pre-amp helped even more. The ARRL satelite handbook form the early 1980s had some plans for simple, "do-able" preamps.
Good luck, it is exiciting to wathc the image appear on your screen. Even my wife likes to watch it.
Another option is to look for a cheap Pro2004. In the WFM mode they will do a pretty good job also.

If you're already planning to change the IF bandwidth, about
the only other thing that matters is "does it tune 137 MHz?"

The signals are loud, and are intended to be heard. A cheap
mast-mounted preamp will do far more for you than worrying
about exactly which scanner to use.

Try monitoring a pass with a simple antenna, like a rubber duck.
If the signals are full-quieting for the best part of a near-
overhead pass, the scanner should do the job.

Way to go Joe! Learn all about ham radio in a couple months
reading RRAP. You must be about ready to take your No Code
tech exam.
Don't forget to memorize the word associations so you can
recognize the answers to the test questions. Fortunately
learning is not necessary.

That and seeing the lids that make a slight advancement
> and then sit on their ass being 'experts' without knowing what the hell

Yeah, man! Ask me how to "open up" the ham rig you just
bought so you can put it on CB/Freebie...I'll tell you to
'cut the lock line', too.

It's called 'feeding misinformation to the enema'.

Oh, I'll bet! Never had a model 80 VFO attached either,
right? Doesn't even have the name Siltronics on the panel
either, does it???

In fact, it has NEVER seen anything but a straight key.
> Period. In the entire time I've owned it since 1981. (I even have

A "mobile chopper", huh? Tell us, whats the purpose of that
thingy, huh? Would you happen to know the REAL term for it,
note just the CB/Freebie term?

You are hereby exposed as just one more CB/Freebander troll
cruising RRAP. Every indication shows it clearly, to anyone
who has been paying attention.

Don't bother playing again.

Then you just don't really want to be a ham. Since you seem to think it
is a 'stupid little hobby' then you shouldn't waste any time on it, so
move on. Either shut up or learn what you need to get a license.

I don't like the way it is, and hope it changes soon. Tired of
listening to old men talking about their health problems on HF.

HF needs new blood and dropping/reducing CW requirements will do it.

Nyet. "Water" is "voda".

"Vodka" is the diminutive of "voda" - in effect, "little water".

Well, you have the first part right, but I'm not sure about the
second part. Incentive licensing, seems to me anyway, reeks of
having 'earned' operating privledges.

>Don't judge me because I don't spout CW. I used to like it. In fact,

If you'd ever known Morse code, you'd still know Morse code. I didn't
know they had HF privledges for the Tech ticket in 1981. What bands
were you operating on back then ? Doin' a little bootleggin' are we ?

>One of these days I'll get that fire back
>to operate CW again. But I'll do it because I WANT to, not because
>I have to.

Where have I heard that line before ? "I can do Morse code. I just
don't do it because somebody says I have to do it". Uh huh, sure ...

Well, beat yourself to death over not wanting to do it. Be my guest.

We haven't established that, Cecil. Some claim CW is outdated; many others contend that it is not. Finding that CW is outdated is a necessary first requirement for declaring the rule outdated. So far, there's been a lot of noise, flames, and debate, but no conclusions. The fact is, CW is still in use daily, even with newer, more efficient modes available.

Michael.

That would certainly be sufficient but I didn't say CW is outdated.
There is simply no reason for the Morse code requirement to continue
to exist. If it wouldn't be adopted new today, there is no good reason
to keep it. Finding that CW is outdated is NOT a necessary first
requirement for declaring the rule outdated. Morse code is simply
not as important as everything else in ham radio combined anymore.

that is not the case. your logic is in error. To attack the
curent of Code testing it is merely needed to deteremine that Code is
not vital. given the ARRL survey and the admissions of ProCoders that
one May forget the Code after the tests and still be good hams, is
proof that it is not vital, therefore it is unfair and unreasonable
for it the the Vital Go NoGo status it has currently. Now a code test
of some sort the reduces the import of pasing or fialing to the
results of say not knowing anything about SSB would a legal and valid
tetst but that does not stisfy the ProCoders. It would statisfy the
NoCodersby and large as a final resolution

>there's been a lot of noise, flames, and debate, but no conclusions. The
>fact is, CW is still in use daily, even with newer, more efficient modes
>available.

The use or non use of Morse Code is not an issue in wether all
hams must demstrate a certain level of mastery. Something that is not
required for the mode in even MORE common use than Code, like SSB or
FM. It is not required that understand one thing about these modes in
order to use them or use other modes

There is currently legislation where friends and family can call and rat out old folks that shouldn't hold a drivers license due to lost vision, hearing, motor skills, etc. The State takes the anonymous tip and retests the suspects.

Maybe we could get that kind of rule going in the amateur service so we don't have to wait for the actuarial tables plus 10 years for changes.

73,
Brian/N0iMD

Is this a none catch-22? Will Robin make it to the Bat Cave to plug the enviorenmentally (hard word) friendly Bat Car back in the Bat Power Plug? Will Bat Man lose his Bat Cajohnes (I'm southern, we don't have this word in our dickchunairy) with out Bat Power? Will Cat Woman jump Robin's Craftsman air wrench handle protruding from his Bat pants as he bends over? Will it hurt?

Stay tuned as the Japs fail to ignore Robynz Craftsman Tool Set as, just as they failed to ignore the clause in the treaty : o) My daddy usta shoot'em you know! Yep. They allways forget treateez (nother one) Why do you know what language we would be speaking if the Neo-Japaneese Japanese had been just a little adventouristic (that a word?) and STOLE America from the Indians instead of us? We'd be Japaneese speaking non-Americans living in a clause! Clauset, if it is small one "o)

Hi,
You said that you can use a preamp? I was wondering...I have a H-T that has a 15kHz bandwidth, can i possibly buy a preamp that will recieve the wideband signal from NOAA and send it to my radio? Or do you need to have a Wideband radio?

Thank you.

Here is a nice story, skip to the second paragraph if you wish not to read the story but to help me out with a question!

Hello,
One saturday morning I goto the liftoff.msfc.nasa.gov website and learn that MIR is going to pass overhead real soon! I quickly run to get my radio hooked up to the computer. I fire up my AGW packet engine, and terminal. Then i sit and watch the little MIR icon slowly progress to the East coast. I open the squelch on my radio, and all i hear is static. I turn on my preamp, and hope that i would get some signal from MIR, something to show off to my friends. All of a sudden i hear the static go quiet, and then a burst of wierd noise pierces my ears! My heart pumping from excitement, i switch to my terminal program and there it is two lines that i was waiting for:

1:FM R0MIR To BEACON <UI PID=FO LEN=18>[11:48:31]
MIR SPACE STATION

Then everything goes staticy, no more signals nothing! I get hooked and I want more! I keep trying for the next week without any luck! Once i set everything up and i heard the same sound i hear at the first time! But my terminal didn't show anything. I thought it was my program, but when i switch to a local packet frequency...i see everything! So my question: What could be wrong?

This must be the weirdest question that is asked all the time. But i can't figure it out. I hear people get MIR packet with no problem, (with rubber duck antennas!) and they can even hit the packet. I have a comet mobile whip outside on the 16th floor (i live in an apartment building), i have a 144-148 mhz preamp! (GaAsFET) I am using an ICOM T7A H-T. With my station would i be able to work MIR packet. (i also put out 35 watts)? I don't even want to work it...i just want to be able to recieve it!!!!

Thats it,
Thank you for reading this message.
Felix

The radio itself must have the proper bandwidth...the preamp will only increase the signal strength to the radio from the antenna. I get acceptable results here with a Uniden BC-860xlt...it may not be the "proper" setup but it works!

1546. FO-29 a beginners satellite!

Newsgroup: rec.radio.amateur.space
Date: 1999-05-02 00:00:00 UTC
From: "KF4FDJ (Mike in Ft. Myers, FL)" <seven77@gate.net>
Message-ID: <372C2DE9.3B8D0F0@gate.net>
Source record: 12562

Since FO-29 is now in digitalker mode, I am distributing this FAQ to the space groups.

Since the previous posts on working the FO29 digitalker, I have been asked several questions on how to hear the FO-29 digitalker. What follows is sort of an evolving FAQ. Feel free to distribute this document. KF4FDJ - May 2, 1999

The Japanese satellite, Fuji Oscar 29 (JAS-2), was launched on August 17, 1996, by H-II rocket No.4, along with the earth observation platform satellite ADEOS, from Tanegashima Space Center of NASDA (National Space Development Agency of Japan). FO-29 is a small LEO (Low Earth Orbit), Japanese owned satellite containing a digitalker, mode JA transponder, and 1200/9600 baud packet capabilities. The mode JA transponder requires a SSB, or CW uplink signal on 2 meters, and transmits a downlink SSB/CW signal on 70 centimeters. Mode JA is a full duplex mode. You WILL hear your own downlink, which is crucial, in order to compensate for doppler. The satellite is also capable of mode JD, (digital) at 1200/9600 baud.

Q Is Fuji Oscar 29 always in digitalker mode, and what is it?
A The digitalker on FO-29 is a digital loop announcement, which makes the same announcement over and over. You will hear, "Ho- ho'kke'kyo, this is JAS two." The first part is the song of a bush warbler. JARL (Japanese Amateur Radio League), plans to cycle digitalker, mode JA, and mode JD. The digitalker message is subject to change. Check announcements on the BB for a mode schedule and other details.

Q Do I need a multimode rig to hear the digitalker?
A Since FO-29 transmits in FM mode while in digitalker, any FM or multimode receiver capable of tuning the 70 cm ham band should be able to detect the signal.

Q Do I have to use a high gain antenna to hear the signal?
A Digitalker operation dedicates most of the power budget of the satellite to the FM transmitter, instead of spreading it across a mode JA transponder. It is a very strong signal! It is possible to hear the satellite with a handheld scanner or transceiver, and a stock "rubber ducky" antenna. Most 70 cm base stations, or scanner listening posts, with fixed antennas, should also be able to tune the signal.

Q I've heard that a circularly polarized antenna is necessary to hear FO-29. Is this true?
A While a circularly polarized antenna will help on mode JA, it is not necessary with the digitalker. It REALLY is possible to copy the signal with a handheld device and a "rubber duck" antenna. We have been

successful with a Yaesu FT-50R and a stock antenna. You will need to rotate the rig (and antenna) for the best orientation. Experience shows that horizontal polarization, with the axis of the antenna perpendicular to the satellite gives the best reception. Experiment!

Q Where do I tune to hear the signal?
A The transmit frequency is 435.910. Of course, you will have to compensate for doppler shift. Just remember you will tune a little higher in frequency as the satellite approaches your position, and a little lower in frequency as it recedes. You will always be tuning higher in frequency when the satellite comes over the horizon. Make sure you have your radio set to tune small increments, as increases and decreases in doppler are gradual, and linear.

Q How long will I be able to hear the satellite during each pass?
A Since FO-29 is a low earth orbit satellite, most passes will be between 6 and 18 minutes in duration. Timing is critical in working any amateur satellite.

Q What is the purpose of the digitalker?
A The digitalker presents an easy opportunity for hams and non hams to have their first taste of real time reception of signals from space. Use this opportunity to show a kid, or a terrestrial ham how easy it can be to tune a satellite. This opportunity is excellent for scout meetings, monthly ham meetings, schools, or any place where nquisitive persons congregate.

Q How will I know when the satellite is over my location?
A You will need a program to generate predictions of when the satellite is "visible" to you. An excellent place to find downloadable software for real time tracking of satellites, and other information on the amateur satellite program in general, is:

http://www.amsat.org

Be sure to download the latest keplerian coordinates if you download a tracking program. Each prediction program needs these coordinates to determine where the satellites are, and to help you determine when FO-29 will be over your horizon. Another casual approach, is to use an online prediction site, such as:

http://acsprod1.acs.ncsu.edu/scripts/HamRadio/sattrack

This site will generate pass predictions for a selected satellite.

If you have any comments, additions, or modifications to this document, please contact me directly. We will attempt to post the latest version whenever the satellite is toggled to digitalker mode.

Hi Felix,
I noticed yesterday during one pass that they weren't even on the air.
Someone also mentioned in one post that they were using 145.940 sometimes. I'm not sure what the story is anymore, the new crew seems to do things different than the last crew.
I'm not familiar with your AGW packet engine. The rest of your set-up should get you into Mir with NO problem at all. No pre-amp is needed by the

way. The Mir PMS (R0MIR-1) is ALWAYS busy, you have to wait until you see a <D> and then POUNCE! The digi was on often but I noticed that isn't even on much now. To use the digi just go into unproto mode and (if your a ham) anything you send will get digi'd when the station hears you. Don't connect to others via Mir though, it slows down everything. Before you connect to the PMS have a pre made up message to leave to them.

73,
Tom

OK Gary.

I finally got round to building a system. I was given a 9in screw jack
and used a rotator thrust bearing bolted vertically on the stub mast to
hold the cross boom. Although the screw jack is labelled 36 volt it
works well at 12v. Just slower, which suits me fine. I get up to about
65deg elevation. No feedback yet to tell what the elevation is. That's
the next project. At the moment I use my security camera to give a good
estimate and shuffle it about a bit to get the best downlink.

I had to add some external 'electronics' as this model of screw jack had
no way of telling when it reached its limits! A couple of reed switches
and a magnet solved that problem. They are arranged to un-short diodes
so as to stop any voltage in each particular direction as needed.

Acid test was working AO-10 last night when it was high above the
Saraha. Managed to work T89LWT, NQ2O, HB9VAF and a few others. Also the
system is fairly easy to maintain as it's only 15ft up to the pivot.

Thanks for your informative reply and the encouragement to continue the
project.

P.S.
Anyone got a good magnifying glass so I can get this model of Phase 3D
built ;>)

I've been leaving my computer and rig on to continuously monitor Mir and have noticed that the packet system isn't on all the time like it used to be. I was ready to go to sleep last night around 2:00 a.m. and heard the radio spring to life. So I went downstairs and saw the Mir packet station was on and I was able to work an east coast station in a unproto mode. It wasn't very busy. It was 4:00 a.m. his time which is probably a good time to be on if you don't want too much competition :-). I found my keps (which were only one week old) to be really far off so I got the latest ones from the Amsat page and now looks right on again.

Ian,

Last word I have over here was a report that they used the SSTV for a school sched on April 30th.A week prior to that I heard a converstation with Jean Pierre and and unknown U.S. ham in which Jean Pierre stated he did not know how to hook up the SSTV and would get Serge to show him how.
I guess that has been accomplished since it was used on 2 passes with the school. Saterday here in the US no signals were heard and today Sunday the 2nd May Packet racket was heard.

I want my M-TV

> get the knack of it.

Nonsese, you're just not approaching the code properly and with enough
determination. If you ever sang a song (not necessarily in tune) you CAN
learn the code.

My dad went up to Montreal to enlist in 1939. The Canadian Army put all its
volunteers through aptitude tests to determine what their specialized
training would be. My father, who was an amateur pianist and a drummer
from the West Indies were the only two chosen from a large group of
soldiers to be trained as PROFESSIONAL telegraphers. My point is that
you must have a sense of rythm to learn Morse. My other point is that few
if any people have neveer sung a song or listened to some kind of music.
Everyone has some rhythmic sense. Here's an example of what I mean:

All sorts of people have learned enough Morse code to pass code tests;
it's only a matter of method, practice and patience. As I recall, once you
had a receiver, it was only a matter of memorizing the code patterns from a
printed chart and spending twenty minutes per night, four nights a week
listening to W1AW's code practice sessions at 5 and 7.5 words per minute,
to learn enough code to pass a code test before an FCC examiner (this was
the 1950s).

Today, there are freeware/shareware programs with settable code speeds
starting as slow as you'd like them to. The only thing standing between
anyone who can read English, Braille or whatever, and reading code at
5 words per minute is determination and an investment of time. You may
resent having to learn code, but if you want to learn the code, you'll learn
the code. Any body (in less politically correct times we used to say
"Any body's little sister") can learn the code. It just ain't that hard.

Here is the subset of INTERNATIONAL MORSE CODE that were
commonly used in ham radio, when I learned them in the early 1950s.
Please keep in mind that _ and . are only convenient abbreviations.

- always should be thought of as dah

. should be thought of as di, except at the end of a character

. should be thought of as dit, at the end of a character

For example: A = didah N = dahdit B = dahdididit

A . _ N _ .

B _ . . . O _ _ _

C _ . _ . P . _ _ .

D _ . . Q _ _ . _

E . R . _ .

F . . _ . S . . .

G _ _ . T _

H . . . . U . . _

I . . V . . . _

J . _ _ _ W . _ _

K _ . _ X _ . . _

L . _ . . Y _ . _ _

M _ _ Z - - . .

1 . _ _ _ _ 6 _ . . . .

Keep in mind that a dah is three times as long as a dit.

The time between successive elements (i.e. dits or dahs) of the
same character is equal to one dit's time. As I remember it (this
one you'd better check), the time between two successive characters
equal to three dits' time.

It'll go easier study if the characters are memorized in mnemonic
groups, according to their sounds.

All dits all dahs

1554. New Ham Radio Software - Ham Toolz -

Newsgroup: rec.radio.amateur.space
Date: 1999-05-02 00:00:00 UTC
From: eric1328@aol.com
Message-ID: <19990502192408.04255.00000848@ng15.aol.com>
Source record: 12570

Soon, Ham Toolz, a new Ham Radio program will be released. The purpose of this software will be to provide Ham Radio Operators with many useful tools. This software will be great for a new hams, just entering the hobby or even experienced hams too. If you would like further info on Ham Toolz visit our website at:
http://members.aol.com/eric1328/hamtoolz/index.htm

Thank you,
Eric Geier, K C 8 K M Z
eric1328@aol.com

1555. Still lookin

Newsgroup: rec.radio.amateur.space

> If you'd ever known Morse code, you'd still know Morse code.

Not always true. I knew morse code, and don't remember any of it now
since I never used it after learning it. The same is true for many Hams
I know.

Why don't Handicaped people have to pass a code test, yet get HF
licenses?

Just about 97% of them.

> You may consider learning the code a waste of time (yours) BUT, if it
> is required to obtain the license you still need it, like it or not.

Obviously. No one here made an argument about code not being a
requirement. If you were paying attention, people here are suggesting
that it not be made a requirement any longer.

> You may never parallel park a car in your lifetime (in 35 years of driving
> I never have), soooo, should it be eliminated from the driving test?

No, that would similar to horizontal and vertical polarization of
antennas on the Ham exam. But there should not be a test of how to
attach skis to the roof of your car, if you want to have a correct
analogy.

> Most of your frivilous analogies fail to hold any water.

Because you don't understand what is being said, and translate the
analogies incorrectly.

Blacks loved that answer back in the slave days, Women loved that answer back in the days when they were not allowed to vote, Hams loved that answer back in the 90's when code was a requirement to use HF.

When they pass a law that says you have to jump off a cliff, I suppose
you will go along with that too.

A legal speed limit is only a meaningless number pulled out of a hat by
some polititian. When they can't get enough people to speed over that
number, they continue to lower that limit until they can generate the
wanted revenue. Police cars always HIDE out of site to catch speeders
because if they were visable, people would not speed past them and they
could not fine them. This is not a matter of saftey, or the police
would not hide, but be visable so that people would see them and not
speed. Can't make much money that way on tickets.

No, why stop there, why not find 600 more skills that you never intend to use and learn them. People take the time to learn what they NEED to know or WANT to know. Why learn Russian if you never intend to go to Russia or ever speak Russian?

You don't understand. Perhaps he wants to be a Ham that can talk on HF
frequencies and never use Morse Code. There are a lot of us like that
that are licensed hams now.

If someone doesn't want to use packet, but wants to just use Morse Code,
does that mean THAT person really doesn't want to be a ham too?

But you did have to answer those questions at least not of of
them. It lie to say you did. You could have choosen to skip that stuff
and then pass everything else I think or if not all of that then most
of that list can avoided if wish or if you needed to. You don't have
to score 100% on the written 70 will do even a little les if i recall
how the rounding is done on that

>
>Why was I subjected to this unessesary testing, I have no intentions of
>doing any of those things, It just wasn't fair that I had to answer
>questions on things I'm never going to use. Sheeesh....

The resaon you were asked and really opught to learn a little
about them, Like should enough about CW reconzie it when I hear it is
that you have to share the bands with these modes and knwoing a little
about them is needed to do that. But I don't need to know how to read
a CW to know if I am interfering with it or things about it's
bandwidth etc.

A couple of observations:

Since only really fine detail doesn't make it through too-narrow
IF filters, you can often get reasonable pictures from an
unmodified radio. The catch is that the finest detail tends to
be the APT sync pulses, so software that is looking for them
(e.g. wxsat) won't find them. You'll hear them ("tick tock
tick tock..."), but the software won't.

A preamp is a very simple device to build. There are zillions
of them in the literature (2m designs work on 137 MHz); mine
uses a BF961 dual-gate MOSFET. If you insist on a GaAsFET
preamp (not really necessary at 137 MHz) you can get cheap
GaAsFETs (e.g. NE25118) made for UHF TV sets and such.

**** PRICE REDUCED ****
I have a virtually new FT-736R with both 6M and 1.2GHz modules installed.
Orignial owner, purchased about a year ago, one of the last. Absolute mint
condition and perfect operating condition -- used little. Also has FM CTCSS
module installed. To be sold only as complete unit as listed -- the ultimate
in VHF/UHF/satt radios. Serious buyers only please! Asking $1800 FIRM
(original
discounted retail more than $3000) and has both the owner and service
manuals. - dont want to sell, there will never be another VHF/UHF box like
the 736R but cannot keep the investment waiting for Phase 3D.
Expanding shack in other areas. Free 16 element 1.2 GHz yagi (commercial)
with
purchase!! ($100 original cost). Have original 736 box and packing for
shipment!!! --- SHIPMENT COST INCLUDED!!!
Contact Bob / N6MTU / email: magill@ix.netcom.com --- will call and discuss
with serious buyers.

Hi Mark,

Forgive me if you've already tried this route, but it *is* possible for the volunteer examiner team to administer adaptive code tests for people with disabilities. I'm not sure if there are hard and fast guidelines for how "adaptive" the test can be. I believe that the examiners at the Handi-Ham radio camp in Malibu this winter sent the letters one at a time, allowing a certain number of seconds for the examinee to provide a response. (I was on the VE team but didn't take part in the code exams.) If I remember correctly, the time allowed was on the order of ten or fifteen seconds, and the exam was passed successfully with 25 consecutive correct answers; equivalent to one minute of solid copy if the exam had been given at 5 wpm.

We will be providing classroom code instruction and VE testing at the Minnesota Handi-Ham camp this August. If you have a chance to attend, it can be a really great experience. Details are available on the Handi-Ham page at http://www.mtn.org/handiham/

Sorry, that's incorrect. One MUST pass 5wpm to recieve ANY
HF license as the international regulations (the ITU treaty)
now stand. The code 'waivers' only apply to speeds above
5wpm.

Good post Mark. That's exactly one of the problems. The FCC suddenly
allowed MDs to make a judgement call on this with no guidelines. And
couple that with the fact that some experts claim that significant
portions
of the population has SOME degree of dyslexia. In most people it's as
simple as transposing two numbers. I never considered myself as
dyslexic, but I had one MD tell me I was because I constantly type 'teh'

instead of 'the'. So at what point does something that isn't even a minor
inconvienence become a disability? Not to knowledge, but when
applied to a program that 'test skill levels'?

It all comes back to CW, is it important or not? If it is, then it shouldn't
be waivered. Period. If it isn't, then what's the point of the test? At the
current time, the FCC has decided that 5wpm is important. And I strongly
suspect that very soon that will change. Whether it changes before
that 5wpm becomes the new defining point for all HAM privlidges is
the question.

That's interesting, Lyle, and certainly meets the ITU/IARU treaty
requirements. What does the FCC say about it?

There has probably been a more detailed clarification from the FCC, but the only thing I can find in the Part 97 rules is a statement that:

"The administering VEs must accommodate an examinee whose physical disabilities require a special examination procedure. The administering VEs may require a physician's certification indicating the nature of the disability before determining which, if any, special procedures must be used."

It's interesting that the VEs *must* accommodate those with disabilities, and *may* require a physician's certification.

Here are some relevant paragraphs from the ARRL VE manual regarding Morse testing:

"Pausing the examination message, where warranted, may be a successful accommodative procedure to overcome candidates' ability to write or respond quickly. The pauses may be included after each sentence or phrase, after each word or even after each character, to allow the examinee the time to write, absorb and/or interpret what was sent. The decision as to the level of pausing warranted is determined by the VE team in conjunction with input from the candidate or the candidate's Doctor's Statement. The level of accommodation should be the least necessary to overcome the candidate's handicap."

In a later paragraph: "For a character-by-character examination, a grade of 70% or more correct characters can be considered passing".

Unfortunately, then comes the kicker, in Mark's case: "If the candidate doesn't have a readily identifiable handicap/disability or if the candidate doesn't provide a Doctor's Statement describing the handicap/disability he/she suffers from, you are not to offer the more

flexible accommodations in administering the Morse code examination."

In many situations, that puts the VE team between a rock and a hard place, because the VEs are generally not qualified to assess "hidden" disabilities like dyslexia, stroke after-effects, etc. In the case of the Handi-Ham camps, the staff and instructors (including at least one MD) who have been working with the students all week can advise the VE team as to the level of accommodation that might be needed. It's a lot tougher at a VE session where people simply walk in off the street.

If this were for anything other than the 5wpm basic test, I think this
would
be grounds for throwning out the whole test. I mean, you could claim 25
WPM here by pausing 15 seconds between each character.

But since someone with a handicap waiver only has to take the 5wpm
test anyway, and the 5wpm test, in my mind, is nothing but
memorization and a 'mental look up', it's not really that much different
than from what a non-handicapped ham would take. But still not the
same. Just not that different.

I'm kind of touchy with handicapped declarations. I had a family member
who was handicapped. And he REFUSED to get handicapped plates
for his car because he said 'it doesn't mean anything anyway'. He had
polio back in the 50s. He could have legally gotten an exemption to
hunt
from his car. As it was, he 'violated' the law in that he didn't
usually move
the required distance from his vehicle, instead he threw a mat over his
hood and lay on it. When he got a deer and help wasn't arround, he'd
put a noose on it's neck and drag it.

Very few things piss me off more than some '*' parking in an handicap
zone without a sticker, or like the guy in the Z-28 (with standard
shift)

in my hometown who I've seen swing into the handicapped spot at the market, throw a placard on the dash, and then hop out in his sweats and running gear and jog into the store.

Anyway, a handicap declaration should mean something. As it is, it's BS and in my mind was used strictly as a wedge to keep the no-code issue under control for a short while longer.

1. How many new hams will join the ranks when the
code is abolished?

2. How many new hams are mandated to "SAVE"
amateur radio from oblivion??

3. What happened to all of the new hams licensed since
the VHF no-code license was introduced?

4. What "AWARD" did the amateur service receive from
congress or the FCC in recognition of the influx
of new hams from the new no-code licenses?

5. Does anyone really believe that CW is the real cause
behind the decline of Amateur Radio?

* PSK31 SUCCESS VIA AMSAT-OSCAR-10 *
====================================
On April 26, 1999 between 2100 and 2151 UTC, Peter, KD7MW of Seattle, U.S.A. and Frank, DL6DBN of Siegen, Germany had a 2-way QSO on the AMSAT-OSCAR-10 satellite using G3PLX's PSK31 software.

As Peter's earlier one-way test indicated, both stations really had to work for it, compensating for transponder frequency shift, QSB and QRN. The QSO was far from conversational, but it was a start!

Peter feels that if PSK31 (or a mode derived from it) is optimized for satellite use particularly with regard to frequency control, some nice possibilities will open up. His tests show that when tuned in well, PSK31 can copy nicely through the very low S/N ratios experienced on OSCAR 10.

If anyone else would like to schedule a PSK31 contact with Peter via satellite, feel free to contact him via e-mail at: kd7mw@amsat.org

Frank, DL6DBN adds that it is of great importance to tune correctly to the received signal (within 2 Hz) which for older synthesized receivers (with 20 Hz tuning steps) is only possible with a combination of the downlink receiver tuning and software carrier frequency tuning. Both methods are not handy so far. What is needed is a fast AFC loop and automated receiver tuning controlled by the PSK31 decoding software.

If the PSK31 reception software is properly locked to the correct frequency, reception is good. With a PC and soundblaster, Frank compares it to CW in a narrow filter of 200 Hz. One must be able to at least hear a bit of the PSK31 signal to tune it in.

As the contact between Peter and Frank showed, QRP is poor for contacts via AO-10. Frank operated with an EIRP of 300 to 350 watts while Peter ran about 1000 W EIRP. Frank could copy almost 50 % of Peter's

transmission correctly while Peter read only parts of Frank's
transmission.

Two days before the contact, Frank could copy his own full-duplex signals
at apogee from a second PC better (60 % copy). Frank assumes lower
Doppler-shift at apogee was the reason for his success.

Frank also feels that while PSK31 might be difficult on AO-10 with its
unstable transponder, it could be great on Phase 3-D. For LEO satellites
with their high Doppler-shift, modifications to PSK31 will be
for any success.

Frank expects to conduct further tests at different mean anomalies and
elevation angles.

Further information on PSK31 may be found at the following URL:

http://aintel.bi.ehu.es/psk31.html

[Info via Peter KD7MW, and Frank DL6DBN]

* RS-13 NEWS *
==============
Harry Bryant, AA2WN reports that Gordon, 6Y5GH, was active last weekend
on RS13 from Kingston Jamaica. Harry had a very nice QSO with Gordon and
Gordon had an excellent signal on the bird.

[Info via Harry Bryant, AA2WN]

* AMSAT-NA CALL FOR PAPERS *
============================
This is the second call to authors who wish to present papers at
the 17th AMSAT-NA Annual Meeting and Space Symposium to be held
October 8-11, 1999 at the Hanalei Hotel in San Diego, California.
Symposium presentations will also be printed in the official
Proceedings document. You do not need to be a member of AMSAT-NA
to present a paper or attend the Symposium.

The subject matter should be topics of interest to the Amateur Radio
satellite service. Key dates for submitting papers are as follows:

One page abstracts due and should be submitted
as soon as possible for consideration.
June 1, 1999 - authors will be advised if accepted
August 1, 1999 - camera ready copy of accepted papers due

Abstracts should be sent to Symposium chair Duane Naugle, KO6BT,
via email at:

ko6bt@amsat.org

or via terrestrial mail to:

Duane Naugle, KO6BT
4111 Nemaha Drive

San Diego, California 92117-4522
USA

Proceedings of the Symposium will be printed by the ARRL and made
available at and immediately after the meeting. If authors do not
wish to present a paper but have a topic of interest, please submit
the topic and arrangements may be made for a stand-in presenter.

Receipt of submissions will be confirmed.

Additional information may be found at http://www.amsat.org/

[Info via Duane, KO6BT]

* AMSAT-OSCAR-10 SPIN RATE STUDY *
==========
Masa, JN1GKZ in Japan last fall found some AO-10 spin rate data and
plotted it on a graph. He found that AO-10's spin rate is not constant,
but rather varies up and down. The spin rate was increasing at last
fall, and started decreasing around last December.

Masa would like to hear from those who have spin rate or spin period
data to share so he can further his study. He promises to plot the
data received on an AO-10 spin rate web page he is creating at the
following URL:

http://www.din.or.jp/~m-arai/ao10/beacone.htm

[Info via Masa, JN1GKZ, jn1gkz@jamsat.or.jp]

* FUJI-OSCAR-29 SCHEDULE *
==========
Although digitalker operation was planned to begin on Wednesday 28-Apr-99,
it had to be postponed until Friday 30-Apr-99 because of the poor
efficiency in uploading the voice data to the satellite.

The FO-29 operating schedule for the month of May is as follows:

Fri 30-Apr-99 0600 UTC - Mon 10-May-99 0400 UTC : Digitalker
Mon 10-May-99 0400 UTC - Mon 17-May-99 0300 UTC : Mode JA
Mon 17-May-99 0300 UTC - Mon 24-May-99 0400 UTC : Mode JD (1200 baud)
Mon 24-May-99 0400 UTC - Mon 31-May-99 0300 UTC : Mode JA

[Info via Kazu Sakamoto, JJ1WTK]

* GSFC SPECIAL EVENT *
==========
For those who receive this issue of SpaceNews a day early, NASA's
Goddard Space Flight Center will begin the celebration of it's 40th
anniversary on 02-May-99. The Goddard Amateur Radio Club will be
operating a special event station from the club station, WA3NAN
on Sunday 02-May-99. Operations will take place on one or more
of the following frequencies +/- QRM and depending upon propagation:

7185 kHz
14295 kHz
21395 kHz

The hours of operation will be from 1400 UTC to 2000 UTC.

[Info via Ron Parise, WA4SIR]

1584. Linear Modulation on ham radio

Newsgroup: rec.radio.amateur.space
Date: 1999-05-03 00:00:00 UTC
From: Michael <commtwo@innercite.com>
Message-ID: <7glfamobn1@remarQ.com>
Source record: 12519
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.space

Just wondering, has anyone tried linear modulation on ham gear? I have read a little about it and it looks like a good mode. I have read about companies running QAM128 over it, but most common digital modulation methods look like they would work fine. Since it self-corrects to the channel, I think that it would work very well with satellite work and a wide-band receiver. The receiver could still hear a narrow-band signal as the doppler shifted, and then the demodulator could automatically shift the signal back to the center frequency that was intended during transmission.

Michael

: 5. Does anyone really believe that CW is the real cause
: behind the decline of Amateur Radio?

The decline of Amateur Radio is due to largely the internet making HAM obsolete except for nostalgia sake (though
alot of HAM's who need to feel more important than they are, would argue).
The secondary reason that HAM has declined is due to a alot of old, narrow minded, biggoted farts who think
they are special and OWN the entire 160-80m range.
Fortunately, these people are old, smoke alot and have alot of ailments (probably from years of being exposed
to high wattage RF) so they will all be dead in a few years anyhow.
There are those who carry on the old fart disfunctional attitudes but they are fortunately (and for HAM's sake) outnumbered
by a majority of new free thinkers who not only want change but see the need for change before HAM becomes nothing
but a cute memory, joked about by grandkids while they are playing video games and sufing the net.

One we damm well do

Two why don't we have to pass 13 wpm and get general if pass
5wpm at some point, becuase the FCC clearly has ruled that Code above
5wpm is not vital for the ARS. All NoCoders are trying to do is get
those ruling more consistantly applied

Mark,

Maybe you've hit upon the answer. If I could only read your stuff
through some static, the text would be spelled perfectly!

Are you accessing the internet via an 80m RTTY link? That thunderstorm
activity must be fearsome with all of those static crashes.

I've gotten ticked in Chicago myself, Mark but not enough to break the
speed limit.

If you received and paid a fine on a ticket issued for doing the legal
posted speed, you are a championship boob.

Are you realy unable to read Dave? is that the problem The
ticket said I was a hazard to traffic, that that I was traveling a
legal speed. Two I never mentioned paying fine did I? I did not pay a
fine

Hi,

FYI.

After a period of network and hardware problems, the site is live again.

It provides daily predictions for all amateur radio satellies
(including MIR) for 11 cities in the UK.

Please visit:

http://www.badgersoft.com/predict/amateur

regards

Dave Johnson

That is your opinion. It is not mine

>anything that you can do.. Not necessarily anything you WANT to do... As

But I can not and you want to keep that way. I can operate on
HF as well as any code tested ham that does not care to use code.
Nothing in the ARS today mean I must know code in order to function
same as you on HF. Indeed I can even Use Morse Code if condictions are
right. i have done that using this very machine.

>in.. If you can get a 'walking' job without having to walk, why should I? If

But why do I need to walk if the job requires me to sit. It is
the same with Code tests. i am required to have known code at some
monent I am not required to keep this skill in order to use RTTY. I
and no othermember of the ARS has to be able to use code in order to
funtion in the ARS. I amnot required to make even one Morse Code QSO,
and yet it is vital that learn Code. My answer to that is Bullshit.
Yes thouse are the rules TODAY but this is americaia and outdated
rules can be changed, if people work for it

>you can get a driving-license without being fully functional, why should I?

You can get a Drivers licesne without being fully functional.
Indeed you can pass the tests for a driving license without any help
and still not be fully functional. You can and should be able to get
one if you handle handle the vechile safely and efectively and can
understand the laws. I don't have to be able to walk into to do that

Part of the FCC charter for the ARS is to encourage self-education.
Quite frankly, I don't see CW as such a big hurdle. 5 wpm is slow. It's
easy. If you can't put forth the effort to learn this much, what effort
will you be putting into the hobby? How will relaxing licensing
requirements help achieve the self-education objective?

Are you just looking for equal rights? Or are you looking for someone to
talk to in your digital modes? Outlawing data modes from HF would help
achieve this end by forcing all packets, for example, to 50 MHz and up.
Now we're all equal, and you didn't have to learn a single new thing.

Michael.

To say You found it easy is one thing. But please (you seem
new around here so you are getting a beter than some of the regular
ProCoders) Don't make claims about how easy it is for others. Frankly
it is insulting for you to claim it is easy for me when I have spent
years on the porhjectand not manged 5wpm. Surely 5 years is enough.

>will you be putting into the hobby? How will relaxing licensing
>requirements help achieve the self-education objective?

How does the current one serve it? Indeed I don't call
learning Morse Code educational anymore than I call learning the Art
of Foil Fencing educational. They both are skills which depend largely
on apttiude rather than entirely on wil or drive. But lets be big and
look at somebody else. A typical person. has fair time learning cw If
he worked a job that left him the same hours everyday. Indeed to use a
friend, with a new tech license. He work 2 jobs He never works the
hours two weeks in a row Yet he manges more on air time than I do. The
Burden involved in learning code clearly increased in today world. The
need for doing as declined. these are simple facts (the debate comes
when you try and say how much)

>
>Are you just looking for equal rights? Or are you looking for someone to

Fine answer and typical of the ProCode posititon.

>talk to in your digital modes? Outlawing data modes from HF would help
>achieve this end by forcing all packets, for example, to 50 MHz and up.
>Now we're all equal, and you didn't have to learn a single new thing.

No we are not equal, because you are being allowed to use your
modes on HF and I am not, thereforeyou have been rights beyond those I
have, therefore we don't have equal rights.

BTW while I do think that Morse Coded Cw is as anet thing bad
for the ARS. I don't seek to impose that position on those that

disagree. You as close to a first thought suggest baning other
peopples Modes. Another Common systom of the ProCoders wanting to
control others. You want me to spend my time as you like, but I don't
seek to impose my views on you. I merely ask, nay I demand the same
rights in Public airwaves that you have

I dated a girl once who explained her fear of driving. People honk at her, and gesture angrily when they pass her. She honestly believed it was a male chauvinistic thing: woman driver and all that. The short end of that story is that she's a horrible driver. Nobody knew where she was going, or what she would do next. She least of all. Her reaction to the ticket would have been similar to yours: she would overlook what is painfully obvious to everyone else, and claim gender discrimination (or whatever) for her ills.

Mark, from all I've read about and from you, I believe you are a hazard to yourself and everyone around you. Life is passing you by, and you are aware enough of this, even if you notice nothing else. The world will not slow down for you, no matter how loudly you yell for it stop. And you are tired of it.

I sympathize with you, but cannot empathize. You see, I believe that there is no such thing as CANNOT, only WILL NOT. To be sure, in 39 years of trying, there have been times when I had to settle for rationalizing failure. Special recognition in spite of failure, or worse, changing the rules after the fact, acknowledges only abject defeat.

Why are HF privileges so important to you? Seeing as how the rules are what they are, with at least a remote possibility that it's this way for good reason, why don't you find something more suited for yourself? Not all vocations or hobbies are for everyone. As has been pointed out to you elsewhere, the largest part of the amateur allocation is above 50 MHz. Learn a mere 10% of what others need to know, and still have 90% of the pie! How much more fair can things be?

Michael.

Yes, in the fine tradition of all engineering.

The safest speed is zero. Your chances of survival diminish from there.
Everything else is a compromise.

Michael.

Where the hell do you get off telling me that life is passing
me by. You don't know me you arrogant ass. wake smell the changes you
bview of the ASRS as code tested is dieing around you.
>
>I sympathize with you, but cannot empathize. You see, I believe that

Aagin five years of trying and fial is not good enough for you

>there is no such thing as CANNOT, only WILL NOT. To be sure, in 39 years

Starndard ProCode line. well even if Code were easy , then
does that fact make code testing right? NO

>of trying, there have been times when I had to settle for rationalizing
>failure. Special recognition in spite of failure, or worse, changing the
>rules after the fact, acknowledges only abject defeat.

The how should bad rules be changed? If the people that run
into them do nothing, then the system continues, doing more harm to
more people. I find it appalling that you don't seem to consider that
you might be wrong. I am certianly able to do so. I have done so in
this forum and elsewhere On this Issue frankly I can't see anything
form the ProCode side that gives me anything to worry about even if I

am wrong about how my psotiioons are formed. have you even stopped to consider the possibility of error in your biews on the subject?

>
>Why are HF privileges so important to you? Seeing as how the rules are

How important do you think they are to me? And where do you get off even asking? Indeed that is one of the porblems with the reasons given fro code testing. The SoCalled weeder factor, by what right does the ARS ask that question? By nonthing I can read in Part 97 the constitution of the Us and ITU teraty I question wether or not the government has the right to even inquire

>what they are, with at least a remote possibility that it's this way for

One I don't see even the remote reason you refer to. Indeed I have read the hisory of the requirment and am convinced that it has at best outlived it use in the ARS I am not convinced it was ever all that proper

Two I don't think the rules will stay as they are. I have read stuff from just before the Tech decision and a lot of people were saying nothing like that would happen either

>good reason, why don't you find something more suited for yourself? Not
>all vocations or hobbies are for everyone. As has been pointed out to

Now you want to throw off the bands I do have. gee If I care about the ARS as I am supposed to right and don't express my veiws and fight for then I'm frankly I am bad person but maybe in your eyes a good ham. If I pursue what I belive is right then I am a bad ham but a good person by the standards I live by or I can leave the hoby alltogether.

Gee which of those would reconend?

>you elsewhere, the largest part of the amateur allocation is above 50
>MHz. Learn a mere 10% of what others need to know, and still have 90% of
>the pie! How much more fair can things be?

As the Balcks in the South had have the bus women ahd and so on.

Do you really need to ask how much more fair things can be? I'll answer, by having people like you stopp telling other how to spend their and using the Government to back it up. If you think Morse Code is so then promote your mode. If you feel it is endanger of dying Hell i don't like the mode but I'll support governement grants to help the cuase of not letting it die. What I will not endure quietly is, is to suffer what I feel is wrong. To do so is in my view at least inhuman and un even antiamerican.To ask me to do so is well ..do i need to tell you.

>were you operating on back then ? Doin' a little bootleggin' are we ?

If you knew anything about HAM radio from back then, you'd remember
that the tech license was essentially a General without the voice. (A
WONDERFUL example of incentive licensing!) It included HF CW
privlidges on 80, 40, 15, and 10 back in 1981. Check the former
call, KA5MJQ.

Personally I operated some 40 but mostly 15. I probably did less
than 10 contacts on 80 in my life, and none on 10 till maybe 1987. In
fact, I don't think I was ever even ON 10 until I bought a RS 10M rig
and ran it SSB first, and jacked around CW a few times, but nothing
serious.

I used a Swan 500CX which I still have. I have the DC chopper
module for it (but only did a little bit of mobile work. Thing drew
40 amps when you tuned!) and the deluxe 117v AC supply with
speaker and a second 117v brick with the rubber mounting feet
for auto use with the chopper bolted to the end in place of the
cable with the Jones connector. I also have the 'semi-break in'
module which is just a VOX module turned to the limit, and the
seconday VFO. And contrary to what know-nothings say, the
Swan 500CX DOESN'T DRIFT! It's just that with a single VFO
if you adjust frequency for tones you end up walking up or down
the band. Once the rig warms up it's pretty darn stabile, and
one HELL of a lot more sensitive than my friends Kenwood
TS-820 was.

Most of my 15M work was loaded to the gutters on my apartment
building. I ran RG-58 though the wall where the cable came through,
then tied the center conductor to a screw I drilled to the down spout.
Then I 'pulled the pin' that held the thing into these 'comb hooks' and
put electrical tape around it, and put it back, effectively insulated.
I
drilled and put a small screw at the juction of the tubes to the roof.
It loaded ok, but incredible RFI.

>
>Don't bother playing again.

Boy are you a small minded no-nothing!! For YOUR information
the mobile DC-Chopper was a small module that 'chopped' the DC
to apply to the Swan 117CX power supply module so that the
chopped DC would work through the transformer. The Swan power
supplies came in two versions, the 117CX (which was a 117v AC
transformer) and a 220 volt verison (I forget the number). To work
mobile, the 'chopper module' was bolted to the end of the power
supply 'brick'. Normally the AC power cord had a 'jones' plug on
the end. Do you even KNOW what a 'jones plug' is? The chopper
module bolted on and mated to the jones plug, and fed the chopped
12v DC to a low voltage winding on the transformer, allowing the rig
to operate DC, but it did draw just over 40 amps when you put the rig
into tune mode.

YOU don't know squat about HAM radio, or at least about the older
rigs. So take your spouting, Mr Carrol, and YOU go back to CB,

or the appliance operator HAM areas. You'll fit right in at 14.313,
or at 27.185.

Personally, I have never had a problem with people wanting to
use code because they like it or because of certain advantages in
some situations. What is a complete turnoff, in my opinion,
is the all too prevelant attitude that CW operators are better than
non-CW operators, even when working voice,
and that some folks feel they "deserve" extra priviliges because
they have a skill that is largely irrelevant to ability to use
HF frequencies and serve the public interest well.

Trent made quite a few good points.

I hear quite a few ham operators talking about the hobby dying. I was recently at an ARRL meeting where this was dicussed then in the next breath it was commented on what *type* of people would be allowed in if the code requirement was lowered. This is the kind of attitude that is driving people away.

I have no doubt that I could pass all the technical test and I am now working on my code. The thing is I have no real desire to do code but I am doing so simply to upgrade my license for the other priviledges.

> As I see it, it comes down to this...

I've hesitated to get into this, but...

I got my novice when I was eleven, extra at 14 (25 years ago, which I guess makes me one of the "old farts" :). The code wasn't a big deal for me, but that's me - people have different skills, not necessarily better, just different.

I don't have any problem with eliminating the code requirement from a "we had to go through it so you do too" elitist attitude. For me it's more basic; one of the reasons ham radio exists is for emergency preparedness. I believe in an emergency situation I could hack together some sort of CW transmitter out of practically any electronic components that were on hand; tubes, transistors, TTL logic gates, whatever; it doesn't take much just to produce a carrier. I probably couldn't hack together an FM or SSB transmitter, even AM might be a stretch depending on what parts were available. I'd *like* to think that there'd be someone out there who would be able to decipher my transmission.

(In fact, that sounds like kind of a fun contest - give each contestant a random assortment of parts or some random piece of consumer gear, say a boombox, and see who can get a readable signal out of it.)

I'm not a Y2K survivalist, I don't get uptight over nuclear proliferation any more than anyone else does, I'm not expecting the world to end any time soon. Just seems to me that we're better off for having this skill in the community.

Nobody is advocating a license for no effort, but advocting a
license where the effort makes sense, but CW IS obsolete (thorugh it's
deathn is only being predicted by ProCoders) so is SSB, and FM. Indded
all ham are pretty much obsolete in hobby that once lead in technical
areas, that is not a good sign. and no ending the testing of CW will
not change that overnight if at all, but ending the stranglehold of
the most obsolete of our modes has to aid us in moving forward

>the VHF no-code license was introduced?

They came in by the boat loads. Just look at which class has the most hams.
Look at the class that brings in the most new hams.

>4. What "AWARD" did the amateur service receive from
>congress or the FCC in recognition of the influx
>of new hams from the new no-code licenses?

Lots of hams donating time and resources to emergency communications.

>5. Does anyone really believe that CW is the real cause
>behind the decline of Amateur Radio?

I think it's the biggest cause *today*. Testing for CW isn't needed today
IMHO. I'd rather that people have to learn more theory instead.
Those who WANT to use CW on HF should have to take a CW test maybe.

Hi,
So your saying that a radio with a 15 kHz IF bandwidth can recieve pictures from NOAA, they just won't have too much detail?

And those APT Sync Pulses are only used to trigger the software to begin recieving?

Thanks,
felixtcpip@aol.com

Few for that reason, but it will be easier to keep the new
ones we get, and we will start the process of closing the widening gap
betwen the VHF and HF ham world
>
>2. How many new hams are mandated to "SAVE"
>amateur radio from oblivion??

That is not the job of the new hams. As to how many well that
depends on how they are treated. If people would treat all new hams
better then fewer will needed.

>
>3. What happened to all of the new hams licensed since
>the VHF no-code license was introduced?

Some of them are here, many of them were dirven off by the
elitism and BS of the HF hams
>
>4. What "AWARD" did the amateur service receive from
>congress or the FCC in recognition of the influx
>of new hams from the new no-code licenses?

None of of course, but then we are not suppoed to expect
compensation for being hams and saving ham radio, that is part of the
price in our license (to be a bit free with the part 97 wording)

The sync pulses are indeed intended to mark the beginning
of each scan line. Depending on where you live they may or
may not be the finest detail in the picture...

CW is the same as riding a bicycle. Once learned, it is not easily
forgotten.

Not quite. A language not used is easily forgotten. And according to the
threads here CW is just another language.

CommQuart wrote:

> 1. How many new hams will join the ranks when the
> code is abolished?

Probably not too many. The Internet has more of an attraction.
You can communicate any where world wide, on a whim.
No Technical experience required... sad to say.

> 2. How many new hams are mandated to "SAVE"
> amateur radio from oblivion??

No number of people will save it. From the looks of things, IMHO,
The bands above 2M will probably be sold off to the highest bidder.
It's a matter of $$$ and demand. We don't put any $$$ into the
Gov'ts coffers.

> 3. What happened to all of the new hams licensed since
> the VHF no-code license was introduced?

They got licenced, got snubbed by the HF snobs and went to the
internet. No license needed there and you can communicate in
any form to anyone, with virtually no restrictions.

> 4. What "AWARD" did the amateur service receive from
> congress or the FCC in recognition of the influx
> of new hams from the new no-code licenses?

AWARD??? We are a service, not really to be classifiied as
as hobby. There are services we are actually supposed to provide
to keep the FREE frequencies we use. We don't get awards.

> 5. Does anyone really believe that CW is the real cause
> behind the decline of Amateur Radio?

It's part of the cause. The primary reason is the Internet. Again,
free communication to anyone worldwide with no restrictions and no
technical requirements needed.

Think about this, if all the rules would allow such a senerio......
You can probably get your DXCC in about an hour with AOL Instant
Messenger.
Send your QSL cards to each other via Email and Email them
to the ARRL. Have them checked and back to you all in the same day with
your Certificate.
No expensive Equipment, no putting up antennas, no tests,
state-of-the-art graphics with

sound..... hey I can even talk to and see the other person in realtime video. Can't so that
with SSTV. Certainly faster the 1200 baud packet, on a keyboard to keyboard QSO.

I did some thing similiar to this in the 80's with packet. I accumulated enough replies to a
World-Wide message, that it amounted to a DXCC. Took about a week.

Tell me where is the attraction, to people with limited technical knowledge or
no interest in radio communications?

Just my opinion.

As a matter of fact, Ohio does NOT have the parallel parking
section on their driving test anymore ! They got rid of it and made the
manoverability part a little harder.

So if your analogy where really valid...=-)

1629. Some thoughts on the CW debate...

Newsgroup: rec.radio.amateur.space
Date: 1999-05-04 00:00:00 UTC
From: jl110@cleveland.Freenet.Edu
Message-ID: <7gn45hlao1@alexander.INS.CWRU.Edu>
Source record: 12537

As I see it, it comes down to this...

While it is true that there are a few (and I mean a FEW) who would like Ham Radio dumbed down into just another version of CB. But this is, by far, nothing less than a tiny minority of the people on the no-code side of the debate. Likewise, now every pro-coder is an old Fuddy Duddy who is stuck in the 50's.

The real problem, that only a few are addressing (like the editors of PopComm), is how this plays to the people who are looking to get into Ham Radio.

First of all, anyone who has a problem with the code, or would rather skip it, is simply pelted with insults. I, for one, was called "lazy" because I was for skipping code altogether. I guess having dyslexia makes me lazy. In order to get a waiver from the code, I would have to spend big money doing to doctors for the paperwork.

Or, I could go no-code. While I am not interested in VHF, I am also uninterested in hearing about how I would not be a "RealHam (TM)" because I am a no-code tech.

Gee, with all of this going on, you wonder why more kids are not getting into Ham Radio ? Unless you fit into some kind of cookie-cutter definition of "RealHam (TM)", you get dumped on coming or going.

SWLing looks a lot better as an alternative all the time. It's rewards, while at times a bit more modest, tends to come at a much more reasonable price.

There was a time when SWL's where the best group for Hams to recruit out of, but that time has come and gone. Ham radio now needs to ask why so many SWL's are voting with their feet.

The civil war in Ham Radio is only acting to turn many people away. I for one do not look for strife, insults, abuse, judgment and childish behavior in a hobby, I look for fun. Myself and others are willing to put forth the effort. But there is a distinct difference between meeting requirements and running a gauntlet of frat-house like initiations.

Yeah, I could pass every technical part of the tests, I could easily learn the proper operating rules. But is it worth it to enter a hobby where anyone who dares disagree with "RealHams (TM)" is lazy, a crybaby, a spoiled cyberkid, etc. ?

Ham Radio has only one place to look for the source of it's problems. It's called a mirror. People are voting with their feet, my friends. I am the last person in the world that wants to see Ham Radio die, but the choice is not mine-

It's all up to the hobby.

When AM came along, many where opposed.

When SuperHet. receivers came along, many where opposed.

When SSB came along, many fought it.

Change is always coming, why fight it ?

The issue is bigger than CW. The real issue is what kind of hobby Ham Radio has become, or rather, what it has degenerated into. While SWLing has it's share of silly moments, it has not degenerated into the sort of malicious, snotty behavior that now appears (from the outside at least) to be slowly permeating Ham radio.

Perhaps it's because SWL's listen ?

It's safer to go with the flow of traffic than to drive 15 miles
slower. Here, following a rule just for the sake of following rules is not
as safe as breaking it.

Hard to say. The hole that has been dug is awful deep. A lot of
people where turned off some time ago, but I think a good number (in the
long term) is possible.

>
>2. How many new hams are mandated to "SAVE"
>amateur radio from oblivion??

Good question. I will have to think about that one.

>
>3. What happened to all of the new hams licensed since
>the VHF no-code license was introduced?

Perhaps they got dumped on for being second class no-code techs by
the "RealHams (TM)" ? I think the deepening of the war going on now acted
to chocke out some of the possible growth.

>
>4. What "AWARD" did the amateur service receive from
>congress or the FCC in recognition of the influx

Trent, It sounds like you are very happy as a SWL. Why do you want to become
a HAM if it is:
1. Impossable for you to learn code.
2. Too expensive to get a CW waver.
3. Too much greif and insults from other hams.
4. Full of other people who are Fuddy Duddy's.

Man.... why dont you stay a SWL and forget Ham radio?
Or do you think it would all change if someone would just GIVE you a
license.

Greetings Trent

You get an A+ for reasoned, well-thought out replies in my
book.

Personally, I have never had a problem with the no-code
license, or the elimination of the CW requirements from the
ham exams. What is a complete turnoff, in my opinion,
is the all-to-prevelant attitude that CW is dead and obsolete,
and that some folks feel they "deserve" an amateur license
with no effort on their part.

Regards

Peter, K1ZJH

Greetings Trent

3. Most of the no-coders in this area got disgusted enough
with repeater operation to go and upgrade on there own.
A rather surprising observation.

4. Would like to believe this, but I am not convinced that
strength lies just in numbers.

5. A lot of the problem is brought on the attitudes of those
positioning for the elimination of the code--arguments such
claiming that "code is obsolete, or not used" is only going
to alienate CW operators only further. Some have been some
reasoned points made (such as yours), but others seem to
reflect a lot of hostility towards hams just because they use
CW in this modern age.

Athough I don't fully agree with Trent's stance in total,
my hat is off to him for giving honest and well reasoned
responses to the issues on hand. My feeling is Trent is
a chap open to both sides of the issue, and I would be
willing to hear his side of the story.

>This is an easy reply: You don't have any idea what you're talking
>about. Posted speeds are not simply "pulled out of a hat".

Well, actually, no, they are not "pulled out of a hat", however they were (and are) to some extent politically motivated. The speed limit was originally dropped to 55 back in the 70s in response to the oil/gas crisis of the time. Eventually more oil was miraculously discovered, but neither the speed limit nor the gas prices ever recovered (and wasn't I thrilled to have this all happen just when I got my driver's license).

The problem is is that roads were engineered for optimization to specific speeds and it was/is almost natural to drive at those speeds (if you have a road engineered to be comfortable at 45, you tend to drive around that limit, if it was engineered to 70, you tend to drive closer to that. Wow, miracle of miracles...revenue!!! Now, I'm not saying it was solely the ticket money that prompted the reamining at 55, they tried to claim it was safer (despite not having any valid third-party studies to back it up). Eventually, the politicians have given way to the people on this one, so the limits are starting to come back up.

I wasted my time learning CW and getting a general lisense. HF is
overwhelming used by fuddy-duddies who use it to talked about health
problems. Or re-re-re-hash tales of WWII. What a bore.

The fellow is smart to stay away till the CW requirement is dropped.
Yes, things will change when HF priviledges are GIVEN away, thank god.

: What is a complete turnoff, in my opinion, is the all-to-prevelant attitude that CW is dead and obsolete,
: and that some folks feel they "deserve" an amateur license with no effort on their part.

There is no honor and glory of being a HAM anymore, it is just now a hobby for nostalgia sake.
Therefore we all deserve to be HAMS as there is nothing to gain from using HAM anymore and there
is nothing special about HAM's anymore except inheriting a bunch of narrow minded old farts for new friends/enemies.

And nobody is advocating that you not be allowed to do just that, Richard.
Nobody is talking about eliminating CW - just about eliminating Morse
code testing. Do you think that CW is such an undesirable mode that nobody
would continue to use it after the requirement is dropped?

I can't help but wonder what hams debated about 50 years ago? The internet
has allowed us to exchange ideas and thoughts in an almost instananeous
manner, sometimes I also wonder if this is good or bad :-/

A sensible take on things I'd say.

I've made the suggestion before, and I'll repeat it again -- for those concerned that removing the CW requirement will turn ham radio into another CB circus, the solution is to retain the CW tests at each code speed, but offer a corresponding optional written test that can be taken instead. The questions on this test should focus on good operating practices, technical knowledge from the next licence grade, emergency and net operating procedures instead of just FCC rules and regulations. I know the FCC doesn't regulate some of these areas, so perhaps HAMS would write these tests with an eye to what they want all hams to know. :)

I suspect that even if the code requirement were abolished tomorrow,
this attitude would persist for many years to come.

CW is almost an aesthetic pleasure for some, who can't imagine that
there might be those who would not thrill to this rather amazing form
of communication. And of course, hard-core DXers and QRP'ers will
remain around forever. CW may never die, regardless of technology.

Again, Mark, you lack reading comprehension. I made no claim regarding morse testing when CW was the only mode. Morse testing was required when I was first licensed in '63 and it was required when I passed the Extra exam in '77. You've asked if I deny that the world operates at a faster pace than it did years ago. Yes, I deny that times passes any more quickly than it did eons ago. My perception of it might be different. Your days are as full or as empty as you wish them to be. Asking a guy who travels the globe for a living if he gets out at all is pea-brained.

> view

It's a mother of a point of view, alright. You seem to claim rights not addressed by the Constitution. You have no birthright to an amateur license at all. No one does. You have no HF access because you haven't passed the exam. I have them because I passed the exam. At various points in time during my nearly 36 years on the air I've held only partial HF access when I held Novice, General and Advanced Class tickets. Now, as an Extra, I have all the FCC permits. Did I know somebody or bribe somebody? Nope. I passed the exams.

You are right about your looking silly to me. Yes, I refuse to admit usurping "your" airspace. Your ridiculous claims that I'm a thief or bigot or calling into question my patriotism make you look more pea-brained than the "do you get out at all?" query.

Bullshit. I suspect that lives were saved by Ham radio within
the last 48 hours here in the US but it was not based on Code skill. I
know that hams were ready to do the same here in Illinois

What has happened with code is a reflection of todays society instant gratification culture mixed with a dumbed down educational system. I agree that in commercial communications code may be obsolete but one of the most important duties of a ham radio operator is to help and sometimes be the only emergency communications means. Under heavy interference by other services or even in low power, code still remains an effective means of communications. I cannot see the problem in learning code except that of a little extra effort. Maybe 13 WPM should be the maximun requirement for the upper licenses. It is true that hams are no more in the forefront of technological developments in radio communications but we still remain as a viable reserve of trained radio operators with knowledge in the radio communications field well beyond that of the laymen.Nonetheless, if the requisites for licensure continue to be dumbed down to a ridiculous level, we will just as well merge with the already chaotic 11 meter band which is our best example of what happens when some controls are not present. Some insist that ham radio has always been elitist because of its requirements.In reality ham radio has been blessed with people from all walks of life and all the socioeconomic levels. The common factor has been a real interest in learning the minimun technical and communication skills and putting up that little extra effort to just do it.

Come on, guys! I rember how
Carl and Jerry used CW when
their car went into the ole
ravine, and the following
month when they lost their
prop, they sent spark-plug
CW off'n the Evinrude, and
the following month they
used a reflective belt-
buckle... and...and... don't
youse 'member? Sheesh!

What is a Tbus (sp) as refering to satellites (polar or geostationary)?
Ive seen this term before and have no idea what it is. Thanks for the
help.

REALLY thoughtful and insightful post Mr. Lee.

EXACTLY the attitude that keeps this debate going.

Exactly!!

But how much CW was useful or used?

This arguement is 100% for the elimination of CW as a requirement. If
it's strictly a question of providing trained operators for emergencies
(a VERY valid arguement) then CW should GO IMMEDIATELY. Numbers
of properly trained operators is NOT provided by blocking out otherwise
desirable people with an artificial gating factor.

And I know, CW skills teach proper traffic handling techiques. That I
will agree with. CW operators DO know how to 'share' a spot in the
spectrum, and CW traffic handlers SHOULD have the techniques
and operator awareness to operate in a congested traffic situation.
But that's BULLSHIT to apply it to traffic handlers today. Not when
packet is much more efficient in an emergency. Or voice when
used properly. The days of a CW operator holed up being a link to
the outside world disappeared a long time ago. (Unless the Russian
and Chinese missles all fire on Jan 1, 2000.)

And (I'm ready for another flame war here!) todays traffic operators
are a farce. OK, 99.999% of the operations are a farce. I hear ZERO,
ZILCH, NADA traffic handling on simplex. They squat on repeaters
to run their traffic nets, and have little or no training in simplex
where
they need to develope skills and most importantly operational attitudes.
If an emergency really hit, and the pool of local repeaters was reduced,
(heck, even it they didn't loose a single repeater) those that 'stayed
up'
would probably be immediatly restricted to emergency service. So
what are the traffic people going to do with their flood of non-critical
health and welfare messages? Panic and break down, that's what!
They're spoiled by the low turnouts and light load on their repeater
traffic nets, and the discipline would crumble in a heavy traffic load
on simplex.

To be fair...

When I look at what Ham Radio has done in the past, and what Ham
radio could do in the future, I find that Ham Radio has so much potential.
I, for one, am the last person who wants to see it die.

Now wait a minute, tubes can be justified. Much more easily than CW.
(Can you tell I own an old Swan?) Tubes are still the only practical
way
to get into the mega-power arena easily. Solid state amps over 100W
are just too fragile....

I'm not saying everyone should know how to design tube projects, but
they should at least have a basic understanding of tube theory. Then if
they need to do anyting with a tube, they look it up in a book. (I may
get flamed for that, but hey, I still look EVERYTHING up when I design
something. My old TI TTL Data Book is falling apart from use!)

Nah, just update the tests to reflect current technology instead of
forcing us to learn
useless stuff like CW and vacuum tubes.

: I've made the suggestion before, and I'll repeat it again -- for those
: concerned that removing the CW requirement will turn ham radio into
: another CB circus, the solution is to retain the CW tests at each code
: speed, but offer a corresponding optional written test that can be
: taken instead.

I though Pepsi only rotted teeth, but I see it can rot a brain as well. Or maybe your teeth are your brain?

I do not think CW is without it's applications. It is obsolete in
the sense that it is not nearly as important as it once was, it is by far
not the only mode on the block. But it is not nearly so obsolete as to be
without a number of applications where it does the job just fine.

I would even go so far as to say that there should be at least
some bands reserved for CW !

Where I differ is where I see CW's place.

For example, to get a higher liscence, your code has to be faster.
